Design, production and sale of innovative and competitive power supplies – worldwide

Mission

This mission statement has been our guiding light for more than 3 decades, governing our engineering, production and sales activities. It is also our commitment to you.

Global Player

As global player with R&D, production and sales departments, we are present in all the significant national and international markets – and wherever you need us.

FRIWO focuses on platform and customized power supplies, primarily for medical devices, IT & communication, domestic appliances, mobile tools, industrial applications, lighting and for units with increased power requirement.

Plug-in power supplies / chargers

Since the development of the world's first plug-in power supply, the brand has become very popular. FRIWO stands for technical expertise when it comes to standard or customized engineering, from conceptual design to finished product.

In 1971 FRIWO has both paved the way for today's market success and set new highlights for power supply and charging technologies – always in accordance with safety standards and regulations.

Standards, regulations and responsibility

FRIWO, of course, meets the stringent criteria and standards of medical technology – many of our products are even far below threshold limits! FRIWO products also comply with legal requirements which have not yet become effective, for instance low power consumption in standby mode.

All products are tested for operational safety on location and leave our factories in impeccable condition. FRIWO's power supplies and chargers are approved in Europe, USA and Canada without further review.

Laws and regulations for the responsible use of environmental resources are becoming increasingly important. FRIWO already meets the requirements of the „Electrical and Electronic Equipment Act“ – ElektroG.

ENERGY STAR

For a long time FRIWO has been involved in the design of energy efficient power supplies. Even prior to the global warming or power consumption discussions FRIWO had accepted environmental responsibility and has been engineering environmentally friendly solutions ever since.

Today, many programs deal with energy efficiency of electronic devices and define threshold limits (efficiency and standby no-load losses). FRIWO is committed to meeting these threshold limits and networks with the relevant authorities.

One of the most familiar programs is ENERGY STAR. In 1992 the U.S. Environmental Protection Agency and the U.S. Department of Energy started this certification program. In accordance with an EU regulation ENERGY STAR was officially implemented in 2003. The ENERGY STAR program currently includes a variety of electronic devices which have been awarded the ENERGY STAR for threshold limit compliance – and many more are to follow. FRIWO has earned the label by complying with the latest state-of-the-art requirements, and uses it to differentiate its products.

In addition, the ErP regulation (Energy related products) looks at all phases of a product's life-cycle. The eco-directive does not only focus on improved energy efficiency but also encourages environmentally-friendly designs. For that purpose, the so-called „Integrated Product Policy“ is to be implemented to improve both the entire production chain and recycling of the product. During a life-cycle, energy and other resources, which are required for production, should be saved. At the same time it must be avoided that improvements to a certain part of the life-cycle generate negative effects in another place.

This standard looks at particular product categories and defines product-specific ecological design requirements. For power supplies, depending on the output power, regulation no. 278/2009 rules the threshold limits for efficiency and standby no-load losses. The second step of the ErP standard has become effective on April 27, 2011.

For most of the global vendors it will become vital to comply with the current threshold limits. FRIWO has already fine-tuned its portfolio to engineer highly efficient power supplies with low standby losses. FRIWO already supplies products which even exceed the current requirements of the ErP standard, and is therefore optimally prepared for possible tightenings of the standard.

Top position in power supplies and chargers

Continuous enhancement of the sophisticated products, innovative design and technical expertise made FRIWO a reliable and experienced partner – worldwide. A highly qualified, flexible and motivated workforce safeguards short development periods.

Design-to-market and customer vicinity mark our product platforms. Flexible usage of global production capacities and an optimized sales organization led to FRIWO's successful positioning on the global market for power supplies and chargers.

Switchmode Power Supplies

PP Series

All products conform to IEC 60950

Applications

- Audio
- Bluetooth/WLAN
- Digital cameras
- Communication accessories
- Measurement and weighing technology
- MPEG Player
- Modems DSL, ADSL, VDSL
- PDA
- Safety technology

Characteristics

- Universal input 100 to 240 V AC
- Constant voltage, current limited
- Low leakage current $\leq 10 \mu\text{A}$
- Low standby power
 $\leq 0.3 \text{ Watts}$
- Continuously short circuit proof

Technical data

Input voltage

100 to 240 V AC ($\pm 10 \%$)

Input current

90 mA (PP 3)

150 mA (PP 6)

200 mA (PP 8)

Frequency

50 to 60 Hz

Efficiency

75 % typ. at full load

EMC

Conforms to EN 55011, EN 55022/B, FCC 47 part 15, EN 61000-3-2, EN 61000-4-2, EN 61000-4-3, EN 61000-4-4, EN 61000-4-5, EN 61000-4-6, EN 61000-4-11

Output voltage tolerance

$\pm 5\%$

Environmental specification

Operating temperature

0 to 40° C at maximum load

Storage temperature

-20 to 70° C

Humidity

5 % to 95 % non condensing

Input transient susceptibility

Complies with IEC 61000 requirements

Safety specification

Standards

Fulfils Class II SELV for the following applications: EN 60950/IEC 60950, VDE, CE label resp. UL 60950

Reliability specification

MTBF calculation

200,000 hours at maximum load and an ambient temperature of 25° C (in accordance with MIL-HDBK-217)

Mechanical specification

Weight approx.

60 g (PP 3)

105 g (PP 6)

110 g (PP 8)

Switchmode Power Supplies Medical Series

with exchangeable primary adapters
(MPP 15/30)

All products conform to IEC 60601-1

Applications

- Blood analyser
- Patient monitors
- Measuring equipment
- Laboratory equipment
- Inhalers
- Patient lifts
- Universal input 100 to 240 V AC
- Constant voltage, current limited
- Green LED indicator
- Low standby power
≤ 0.3 Watts (PP 8) resp.
≤ 0.5 Watts (MPP 15/30)
- Continuously short circuit proof
- Exchangeable primary adapters (MPP 15/30)

Characteristics

Technical data

Input voltage
100 to 240 V AC ($\pm 10\%$)

200 mA (PP 8), 400 mA (MPP 15),
700 mA (MPP 30)

Frequency

50 to 60 Hz

Efficiency

80 % typ. at full load, PP 8 75%

EMC

Conforms to

EN 55011, EN 55022/B,
FCC 47 part 15, EN 61000-3-2,
EN 61000-4-2, EN 61000-4-3,
EN 61000-4-4, EN 61000-4-5,
EN 61000-4-6, EN 61000-4-11

Output voltage tolerance

± 5%

Environmental specification

Operating temperature

0 to 40° C at maximum load

Storage temperature

-40 to 70° C, PP 8 (-20 to 70° C)

Humidity

5 % to 95 % non condensing

Input transient susceptibility

Complies with IEC 61000 requirements

Safety specification

Standards

Fulfils Class II SELV for the following applications:

IEC 60601-1, UL 2601, VDE, CE label,
fulfils medical application class B/BF/CF

Reliability specification

MTBF calculation

200,000 hours at maximum load
and an ambient temperature of 25° C
(in accordance with MIL-HDBK-217)

Mechanical specification

Weight approx.

110 g (PP 8), 160 g (MPP 15), 255 g (MPP 30)

Plug connector

AC input:
FRIWO exchangeable mains plug system:
EURO, UK, USA/Japan, Australia, IEC
PP 8: EURO, UK, USA/Japan
DC output:
Universal output plug system (page 30)

For primary adapters see page 30

The new **open frame units**
comply with standard IEC 60601-1,
see pages 24/25.

Switchmode Chargers

Chargers

with exchangeable primary adapters
(MPP 15/30 and GPP 18/36)

All products conform to
IEC 60335 and IEC 60601-1

Applications

- Medical applications
- Electrical vehicles
- Stair lifts/patient lifts
- Mobile lighting
- Cleaning machines
- Professional photographic technology
- Mobile measuring technology
- Starter batteries
- Diving lamps

Characteristics

- Universal input 100–240 V AC
- Constant voltage, current limited
- Exchangeable primary adapters (MPP and GPP system)
- Low leakage current
- Low standby power
- LED charge indication
- Continuously short circuit proof
- Reverse polarity protection (not PP 8 Pb)
- 10KNTC, B = 3977
- Characteristics: Pb = IU0U

Technical data

Input voltage

100 to 240 V ($\pm 10\%$),
PP 8 (0.13 – 0.2 A),
MPP 15 (0.25 – 0.3 A), MPP 30 (0.4 – 0.5 A),
GPP 18 (0.2 – 0.4 A) GPP 36 (0.18 – 0.45 A)

Frequency

50 to 60 Hz

Efficiency

75 % at full load

EMC

Conforms to
EN 55011, EN 55022/B, FCC 47 part 15,
EN 61000-3-2, EN 61000-4-2, EN 61000-4-3,
EN 61000-4-4, EN 61000-4-5, EN 61000-4-6,
EN 61000-4-11

Output current tolerance

$\pm 10\%$

Environmental specification

Operating temperature

0 to 40° C at maximum load

Storage temperature

-40 to 70° C

Humidity

5 % to 95 % non condensing

Input transient susceptibility

Complies with IEC 61000 requirements

Safety specification

Standards

Fulfils Class II SELV for the following applications:
IEC 60601-1 (NiCd/NiMH only MPP 15)
IEC 60335-2-29, UL 1310, UL 2601-1 (only Li-Ion),
VDE, CE label, CSA

Reliability specification

MTBF calculation

200,000 hours resp. 100,000 hours (NiCd/NiMh) at maximum load and an ambient temperature of 25° C (in accordance with MIL-HDBK-217)

Mechanical specification

Weight approx.

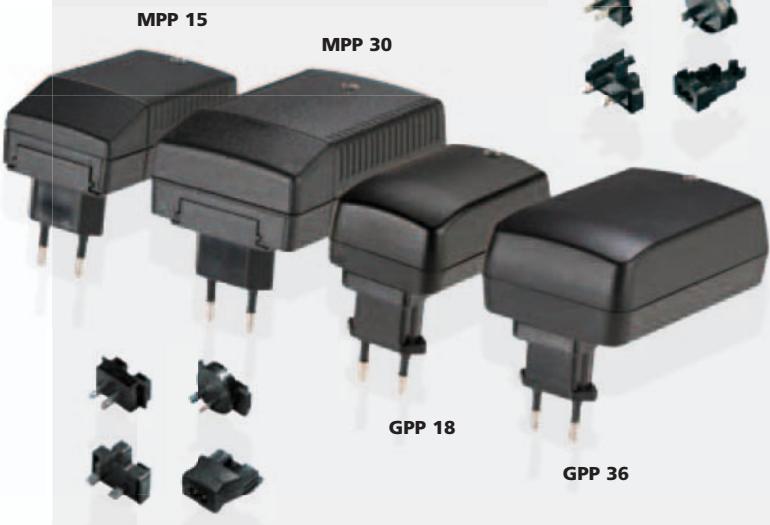

PP 8 Li-Ion (125 g),
MPP 15 (140 g), MPP 30 (278 g),
GPP 18 (200 g) GPP 36 (320 g)

Plug connector

AC input:
(MPP/GPP) FRIWO exchangeable mains plug system, PP 8 (Euro, USA/Japan, UK)
DC output:
Universal output plug system (page 30)

For primary adapters see page 30

NiCd/NiMH

Pb

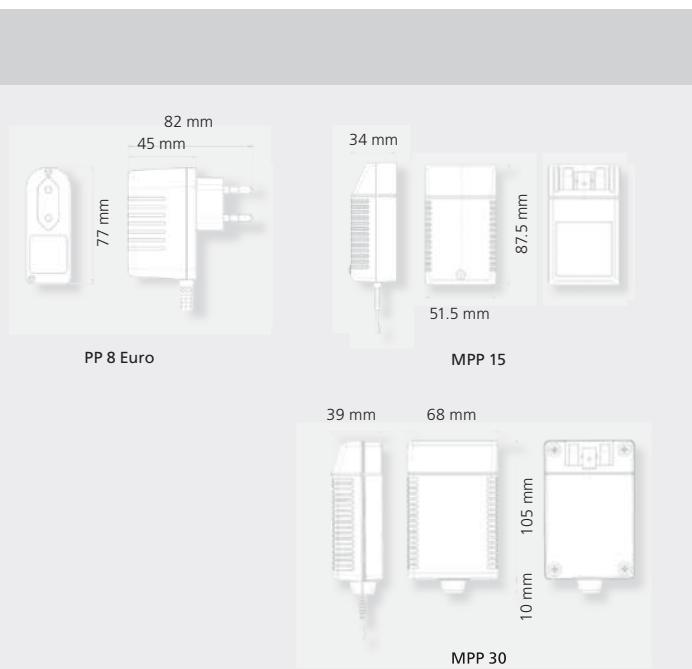

Product	FW Type	Approvals
MPP 15 NiCd/NiMH	FW 7219	
MPP 30 NiCd/NiMH	FW 7304

Please observe accu specification.

Accessories

Primary adapters

The MPP/GPP line is available with country-specific mains plugs. The products are therefore universally applicable. Not only do the plugs enhance mobility and reliability of the corresponding product, they even facilitate the management of the country versions of power supplies and chargers.

In countries with mains plugs which are not covered by EURO, UK, USA/Japan and Australia mains plug types, the IEC adapter with the 2-pin IEC 320 C8 socket provides a standardized alternative.

Secondary adapters

All standard units come with a round lead of 1.83 m length and our approved secondary adapter system. Depending on the required output voltage, the wire diameter is between 0.25 mm² (AWG30) and 1,31 mm² (AWG16). FRIWO also offers a broad range of secondary output plugs, including coaxial plugs (acc. to DIN 45323) and jack plugs (acc. to DIN 45318). Polarity is adjustable by reversing connector.

Customer-specific leads are also an option. If necessary, customer-specific flat or round leads can be fitted. Special versions as well as types and dimensions of low voltage plugs are available too.

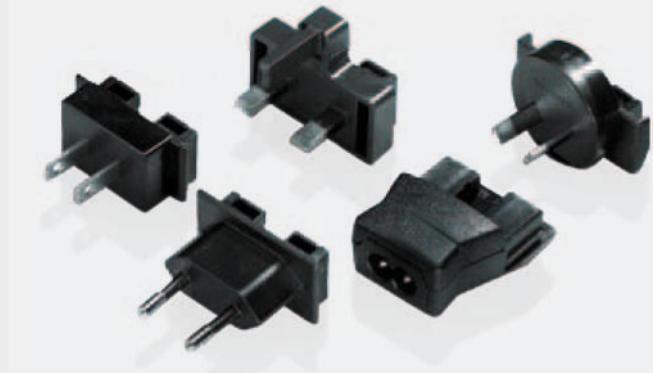

Power cords

Power cords with 2 contact IEC 320 C7 mains plug provide a specific solution for each country. All power cords are 2 m of length and can be used with our IEC 320 CB socket for the MPP/GPP and DT lines.

Inductive charging

Block diagram of inductive charger

FRIWO not only engineers classic power supplies but also engages in inductive charging. Inductive charging means energy transmission without wiring or electrical contacts between charger and end product.

The benefits of contactless charging are reflected in the improved handling of equipment for daily use (toothbrushes, cell phones). It is also most suited for other applications. The absence of connecting leads or plugs between charger and product allows completely encapsulated systems to be used under water, for medical applications and in potentially explosive areas (e.g. flammable gases).

The development of products often creates new challenges like:

- changed system component requirements
- energy transmission between mechanically separated primary and secondary side
- changed efficiency standards
- disturbances in the alternating magnetic field
- positioning of primary and secondary bobbin
- detection of foreign objects, etc.

FRIWO has managed to cope with these challenges and already supplies notable customers with inductive chargers of 30 Watts max.

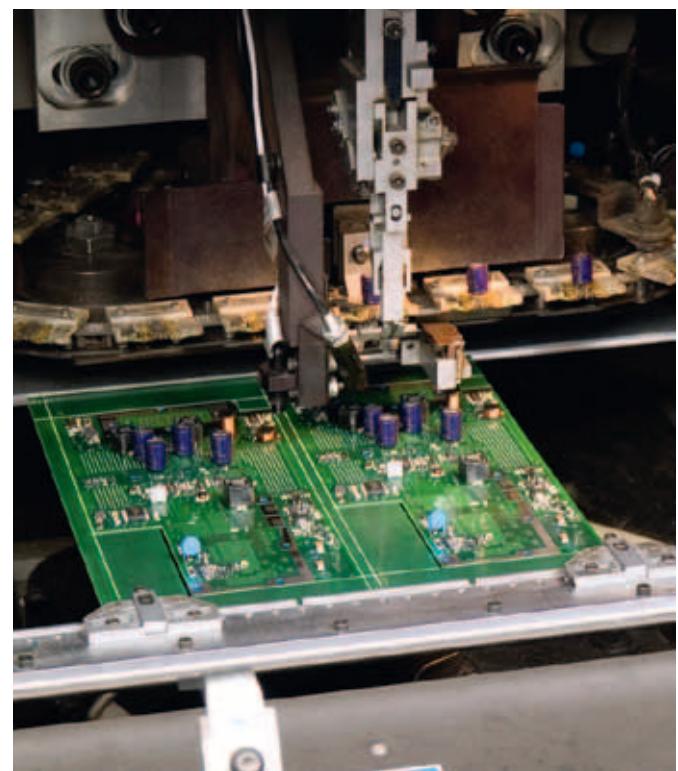

EMS

FRIWO – Your service provider for electronic modules and devices

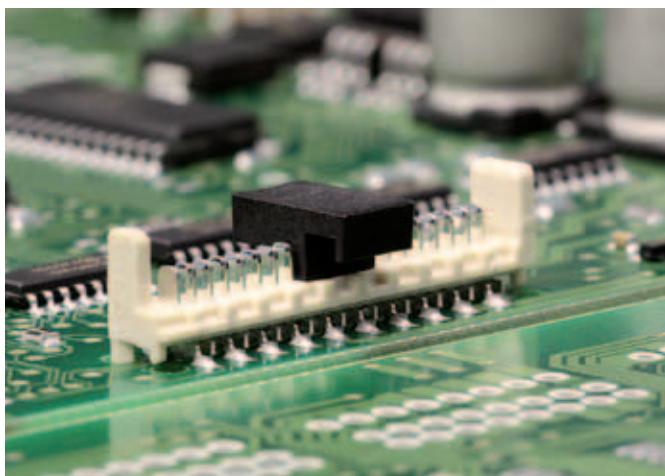

FRIWO takes care of your entire electronic contract manufacture. You turn in your specifications and bill of materials - we do the rest and you get everything from a single source - after prior consultation. Our experienced staff will guide you all the way, from inquiry to production, from testing and packing to delivery. The experts of our strategic and operative purchasing department

engage in worldwide sourcing of the required electronic and mechanical components. Process liability is safeguarded by automatic inspection systems. Voltage and current are trimmed by laser. The quality department is significantly involved and monitors each and every production step.

EMS

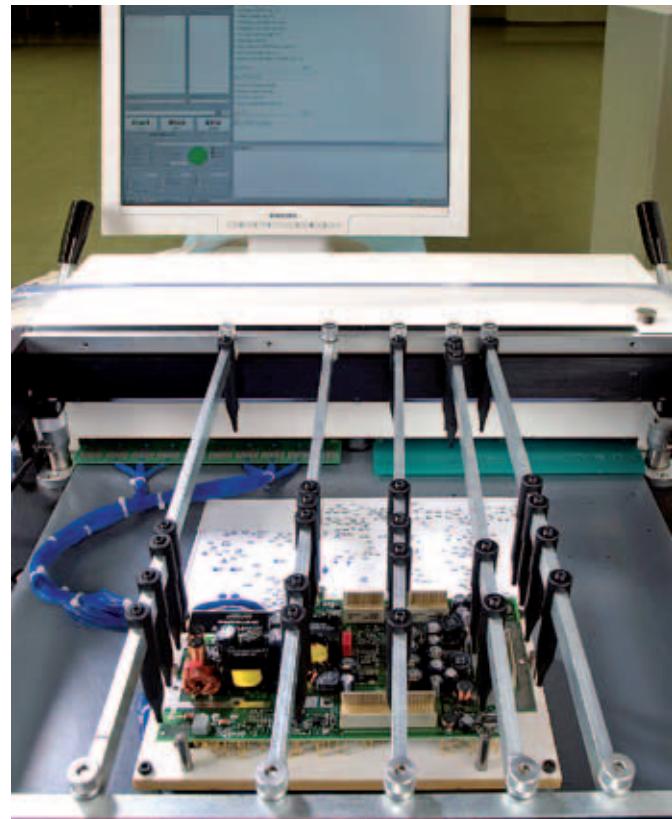

Final inspection plays an important role and belongs to FRIWO's core competences. It is supported by in-circuit and functional testing equipment. FRIWO is DIN EN ISO 9001-2000 and DIN EN ISO 14001 2005 certified. Should an automatic production turn out to be impracticable because of product size or weight, FRIWO will immediately switch to manual production. Volume flexibility is also not foreign to us.

The use of lead-free solder has become mainstream to the increasing global trend in environmental issues. FRIWO immediately responded and complies with RoHS „Restriction of the use of certain hazardous substances in electrical and electronic equipment“.

Our EMS service yields important synergies for you which will significantly influence your product's profitability. Outsourcing was once considered just a way to save costs, now there are even more benefits: you can focus on your core competences, and you get extra capacities which help you to avoid bottlenecks or overcapacities. FRIWO offers state-of-the-art equipment and standards which reduce the customer's entrepreneurial risk. No need to invest in new technologies, capital lockup is minimized and liquidity increased.

Your are looking for a partner you can rely on? You have come to the right place!

Abbreviations

PP	= Power Plug
MPP	= Multi Power Plug
GPP	= Global Power Plug
UP	= in-wall
DT	= Desktop
OF	= Open frame
SMT	= Surface Mount Technology
USB	= Universal Serial Bus
EMS	= Electronic Manufacturing Service
LED	= Light Emitting Diode

Ambient temperature

Temperature of inactive air which surrounds the power supply.
It is usually measured approx. 10 mm apart from the running power supply.

Class B

Protection against electric shock in due consideration of the leakage current.

Class BF

Like B, but taking into account the so-called „F parts“ which may accidentally come into contact with the patient and which are isolated from other parts.

Class CF

Class with the highest protection.

Current limited

Electronic overload protection which limits the maximum output current to a preset value.

Efficiency

Efficiency is calculated as the ratio of output to input power and is always smaller than 1. To reduce the power loss under the given load prerequisites, the maximum efficiency ratio is aspired. For a power supply it is measured at full load and at nominal input. The difference between input and output is transposed into heat, hence each increase of the efficiency ratio means less thermal stress on the components and therefore a life-cycle increase. Even a minor improvement of the efficiency ratio can have a dramatic impact on the life-cycle.

Cell chemistries

Li-Ion = Lithium Ion

LiFePO₄ = Lithium Iron Phosphate

Pb = Lead Acid

NiCd = Nickel Cadmium

NiMH = Nickel Metal Hydride

EMC

The ability of electrical equipment to function satisfactorily in its electromagnetic environment without negative interferences. Power supplies should meet at least two generic standards for EMC:

1. standard for transient emissions (grid-bound interferences emitted by the power supply) and
2. standard for interference immunity (protection against external interferences)

These generic standards comprise a multitude of sub-standards that define threshold values for subdomains (for example certain types of interferences). FRIWO power supplies meet these standards to a higher degree than required to make the most of EMC, and to safeguard a trouble-free service.

Life-cycle

Life-cycle of a power supply. After the end of life power supplies are likely to break down because of worn components.

NTC

A temperature-sensitive resistor with negative coefficient which reduces the resistance as temperature increases. It is therefore also called thermistor. It serves not only the temperature monitoring but also limits the inrush current of power supplies.

Operating temperature

Temperature of still air surrounding the device. It is usually measured approx. 10 mm next to the operated device.

Overvoltage resistance

A circuitry within the power supplies monitors the output. If a preset threshold value is exceeded, the power supply will be turned off.

Short circuit proof

Short circuit proof means that a temporary short circuit can be absorbed without damage.

Single range

Power supplies with single input voltage for the use in the respective countries.

SMT

SMT is a surface mount technology which allows surface mountable components with solderable pads (without wire connectors) to be soldered directly onto a PCB.

Standby losses

Power consumption of a power supply during idle service.

Storage temperature

Temperature range in which a device may be stored (not operated) without being damaged.

Sustained short circuit proof

A short circuit might occur without damaging the output. As soon as the problem is solved, the output will return to normal service.

THT

Stands for „through-hole technology“. Wired components are connected to the PCB by vias and connected by a special THT soldering process.

Voltage controlled

A control loop in the power supply stabilizes the output voltage, independent of all factors (e.g. temperature).

Wide range

Power supplies with wide range input can be operated at different nominal voltages without having to be adjusted (manually or automatically).
