SERIES

**Multi-function electronic staircase timers
1 NO 16 A 17.5 mm wide**

Type 14.01

- 8 functions
- Switch-off "early warning" options

Type 14.11

- 4 functions
- Terminal for reset (centralised switch off)

Type 14.71

- 3 functions

- Time setting from 30 seconds to 20 minutes
- "Zero crossing" load switching
- Suitable for 3 or 4 wire systems, with automatic recognition
- Compatible with movement detectors (18 series)
- LED status indicators
- Cadmium free contact material
- Can be used with illuminated push - buttons
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the function selector, the timing trimmer, and to disengage the 35 mm rail mounting clip
- 35 mm rail (EN 60715) mount

Type 14.81

- Staircase timer + maintenance function

Type 14.91

- Signal ON pulse timer

- Time setting from 30 seconds to 20 minutes
- "Zero crossing" load switching
- Wiring compatible with mechanical versions and with old type (low emission) illuminated pushbuttons
- Suitable for 3 or 4 wire systems, via "pushbutton configuration"
- 110...125 V AC supply version available (14.81)
- Cadmium free contact material
- Can be used with illuminated push - buttons
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the function selector, the timing trimmer, and to disengage the 35 mm rail mounting clip

Zero crossing switching

- 1 - Lower inrush current protects and increases lamp life
- 2 - Lower inrush current reduces the possibility of contact welding
- 3 - The current at switch-off is also lower, reducing stress and wear on the contacts

Note

Using the type 14.91, the lamps are switched on directly by the push-button

Functions

Type 14.01 Functions selectable with front rotary selector

**(BE) Staircase timer**

On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.

On expiry of the time delay, the output contact opens.

**(ME) Staircase timer + Staircase maintenance**

In addition to the Staircase timer function (BE), an impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60 minute timing can be interrupted by a further impulse of ≥ 5 seconds, and the output contact then opens

**(BP) Staircase timer with early warning**

On initial impulse the output contact closes and the timing starts for the pre-set duration. After the timing period, the output contact blinks off once; 10secs later the contact blinks off twice, and after a further 10secs the contact opens.

During the pre-set and 20 second warning time, it is possible, by a further impulse, to extend the time by the full pre-set value.

**(MP) Staircase timer with early warning + Staircase maintenance**

In addition to the Staircase timer function (BP), an impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60 minute timing can be interrupted by a further impulse of ≥ 5 seconds, and the output contact then opens

**(IT) Timing step relay**

On initial impulse the output contact closes and timing starts for the pre-set duration;

On expiry of the time delay, the output contact opens.

During the timing period it is possible to immediately open the contact with a further impulse.

**(IP) Timing step relay with early warning**

On initial impulse the output contact closes and timing starts for the pre-set duration;

After the timing period, the output contact blinks off once; 10 secs later the contact blinks off twice, and after a further 10 secs the contact opens.

During the pre-set and 20 second warning time, it is possible to immediately open the output contact by a further impulse.

**(RI) Step relay**

After every impulse, the output contact changes state - alternately switching from open to closed and vice versa.

**Light ON**

With this function set - the output contact stays permanently closed.

NOTE: The blinking within the Early Warning functions (BP and IP) could cause re-start problems for fluorescent lamps with electromagnetic chokes (both conventional and compact types); We consequently suggest not to use such lamps with these functions.

Functions

Type 14.11 Functions selectable with front rotary selector

(RI) Step relay

The device works like a classic step relay: the output changes state each time pushbutton (3) is pressed. Pressing OFF for more than 3 seconds forces the output to the off state.

(IT) Timing step relay

On initial impulse the output contact closes and timing starts for the pre-set duration; On expiry of the time delay, the output contact opens. During the timing period it is possible to immediately open the contact with a further impulse. Pressing OFF for more than 3 seconds forces the output to the off state.

(BE) Staircase timer

On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.

On expiry of the time delay, the output contact opens. Pressing OFF for more than 3 seconds forces the output to the off state.

Light ON

With this function set - the output contact stays permanently closed.

Type 14.71 Functions selectable with front selector

3-function front selector

	⌚ Staircase timer (compatible with 18 series movement detectors)

⌚ Staircase timer

On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.

On expiry of the time delay, the output contact opens.

Staircase maintenance

An impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60' timing can be interrupted by a further impulse of ≥ 5 seconds, the output contact opens.

Light ON

With this function set - the output contact stays permanently closed.

Functions

Type 14.81

**Staircase timer**

On initial impulse the output contact closes and timing starts for the pre-set duration; subsequent impulses during the timing period will extend the timing period by the full pre-set value.

On expiry of the time delay, the output contact opens.

**"Staircase maintenance" function**

An impulse of ≥ 5 seconds will close the output contact for 60 minutes, after which time the contact will open. Ideal for maintenance or cleaning activities. The 60' timing can be interrupted by a further impulse of ≥ 5 seconds, which will re-establish the staircase timer function; so on expiry of the staircase time delay, the output contact opens.

Type 14.91

**Signal ON pulse**

On initial impulse the output contact closes, and remain so for the duration of the preset delay. On expiry of the time delay, the output contact opens.
