

# Tutorial Panels Uno **Volta**

## UV-104

### Home Door Interface Tutorial panel, External Unit

The UV-104 tutorial panel is designed to get students acquainted with the issue of classical home interface. The panel includes an external panel with speaker and microphone and an electric home lock. This panel also includes a power supply for both the interface and the connected units with home microphones. You can connect two of them to the interface at the same time. Students can thus practically verify the connection and function of the home microphone when communicating with the external unit and the remote front door opening. This panel is supplied with 230 V / 50 Hz voltage from the power supply.

### Parts used:

External bell panel; speaker, microphone, 2x push-button

Electromagnetic door lock

Power supply; built-in inside the panel

## Examples of connection

- Connecting the home interface to the controller which enables you to control it from one place.
- Connecting the home interface to the controller which enables you to control it from two places.
- All connections must be realized in conjunction with the UV-105 panel.

## Accessories:

- Power cord
- Operating Instructions

## Optional accessories

- Security patch cords
- Protective bag
- Task book
