

With the PFC200 Controller as its central component, the Linux® Starter Kit provides an entry to the world of open programming. In addition to its scalability through the open-source community, the primary advantage of having a controller with an open-source operating system is its continual development and maintenance.

Besides the PFC200, other components of the starter kit include input and output modules, a power supply, a switching module and the accessories needed to start programming immediately with Linux<sup>®</sup>.

Additional information on Linux® is available at: <a href="https://www.wago.com/linux">https://www.wago.com/linux</a>.
