

Mixed Signal Oscilloscopes

MSO3000 Series, DPO3000 Series Data Sheet

Features & Benefits

Key Performance Specifications

- 500, 300, 100 MHz Bandwidth Models
- 2 and 4 Analog Channel Models
- 16 Digital Channels (MSO Series)
- 2.5 GS/s Sample Rate on All Channels
- 5 Megapoint Record Length on All Channels
- >50,000 wfm/s Maximum Waveform Capture Rate
- Suite of Advanced Triggers

Ease of Use Features

- Wave Inspector® Controls Provide Easy Navigation and Automated Search of Waveform Data
- 29 Automated Measurements, and FFT Analysis for Simplified Waveform Analysis
- TekVPI® Probe Interface Supports Active, Differential, and Current Probes for Automatic Scaling and Units
- 9 in. (229 mm) WVGA Widescreen Color Display
- Small Footprint and Lightweight – Only 5.8 in. (147 mm) deep and 9 lb. (4 kg)

Connectivity

- USB 2.0 Host Port on both the Front Panel and Rear Panel for Quick and Easy Data Storage, Printing, and Connecting a USB Keyboard
- USB 2.0 Device Port on Rear Panel for Easy Connection to a PC or Direct Printing to a PictBridge®-compatible Printer
- Integrated 10/100 Ethernet Port for Network Connection and Video Out Port to Export the Oscilloscope Display to a Monitor or Projector

Optional Serial Triggering and Analysis

- Automated Serial Triggering, Decode, and Search Options for I²C, SPI, CAN, LIN, RS-232/422/485/UART, and I²S/LJ/RJ/TDM

Mixed Signal Design and Analysis (MSO Series)

- Automated Triggering, Decode, and Search on Parallel Buses
- Multichannel Setup and Hold Triggering
- MagniVu™ High-speed Acquisition Provides 121.2 ps Fine Timing Resolution on Digital Channels

Optional Application Support

- Power Analysis
- HDTV and Custom Video Analysis

Feature-rich Tools for Debugging Mixed Signal Designs

With the MSO/DPO3000 Mixed Signal Oscilloscope Series, you can analyze up to 20 analog and digital signals with a single instrument to quickly find and diagnose problems in complex designs. Bandwidths up to 500 MHz and a minimum of 5x oversampling on all channels ensure you have the performance you need for many of today's mainstream applications. To capture long windows of signal activity while maintaining fine timing resolution, the MSO/DPO3000 offers a deep record length of 5 Mpoints standard on all channels.

With Wave Inspector® controls for rapid waveform navigation, automated serial and parallel bus analysis, and automated power analysis - the MSO/DPO3000 Oscilloscope Series from Tektronix provides the feature-rich tools you need to simplify and speed debug of your complex design.

Discover – Fast waveform capture rate - over 50,000 wfm/s - maximizes the probability of capturing elusive glitches and other infrequent events.

Comprehensive Features Speed Every Stage of Debug

The MSO/DPO3000 Series offers a robust set of features to speed every stage of debugging your design – from quickly discovering an anomaly and capturing it, to searching your waveform record for the event and analyzing its characteristics and your device's behavior.

Discover

To debug a design problem, first you must know it exists. Every design engineer spends time looking for problems in their design, a time-consuming and frustrating task without the right debug tools.

The MSO/DPO3000 Series offers the industry's most complete visualization of signals, providing fast insight into the real operation of your device. A fast waveform capture rate - greater than 50,000 waveforms per second - enables you to see glitches and other infrequent transients within seconds, revealing the true nature of device faults. A digital phosphor display with intensity grading shows the history of a signal's activity by intensifying areas of the signal that occur more frequently, providing a visual display of just how often anomalies occur.

Capture – Triggering on a specific transmit data packet going across an RS-232 bus. A complete set of triggers, including triggers for specific serial packet content, ensures you quickly capture your event of interest.

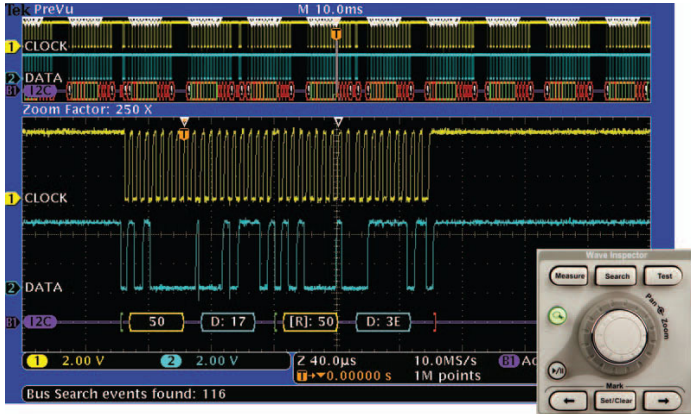

Capture

Discovering a device fault is only the first step. Next, you must capture the event of interest to identify root cause.

The MSO/DPO3000 Series provides a complete set of triggers - including runt, logic, pulse width/glitch, setup/hold violation, serial packet, and parallel data - to help quickly find your event. With up to a 5 Mpoint record length, you can capture many events of interest, even thousands of serial packets, in a single acquisition for further analysis while maintaining high resolution to zoom in on fine signal details.

From triggering on specific packet content to automatic decode in multiple data formats, the MSO/DPO3000 Series provides integrated support for the industry's broadest range of serial buses – I²C, SPI, CAN, LIN, RS-232/422/485/UART, and I²S/LJ/RJ/TDM. The ability to decode up to two serial and/or parallel buses simultaneously means you gain insight into system-level problems quickly.

To further help troubleshoot system-level interactions in complex embedded systems, the MSO3000 Series offers 16 digital channels in addition to its analog channels. Since the digital channels are fully integrated into the oscilloscope, you can trigger across all input channels, automatically time-correlating all analog, digital, and serial signals. The MagniVu™ high-speed acquisition enables you to acquire fine signal detail (up to 121.2 ps resolution) around the trigger point for precision measurements. MagniVu is essential for making accurate timing measurements for setup and hold measurements, clock delay, signal skew, and glitch characterization.

Search – I2C decode showing results from a Wave Inspector search for Address value 50. Wave Inspector controls provide unprecedented efficiency in viewing and navigating waveform data.

Search

Finding your event of interest in a long waveform record can be time consuming without the right search tools. With today's record lengths pushing beyond a million data points, locating your event can mean scrolling through thousands of screens of signal activity.

The MSO/DPO3000 Series offers the industry's most comprehensive search and waveform navigation with its innovative Wave Inspector® controls. These controls speed panning and zooming through your record. With a unique force-feedback system, you can move from one end of your record to the other in just seconds. User marks allow you to mark any location that you may want to reference later for further investigation. Or, automatically search your record for criteria you define. Wave Inspector will instantly search your entire record, including analog, digital, and serial bus data. Along the way it will automatically mark every occurrence of your defined event so you can quickly move between events.

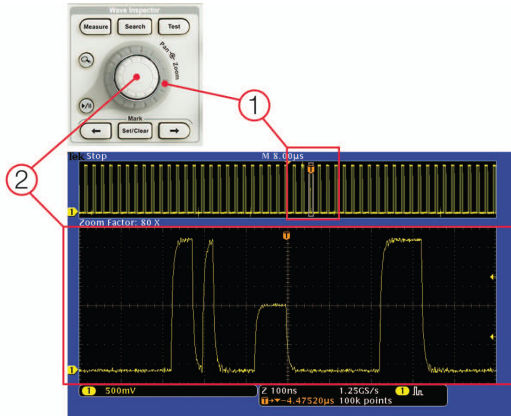

Analyze – FFT analysis of a pulsed signal. A comprehensive set of integrated analysis tools speeds verification of your design's performance.

Analyze

Verifying that your prototype's performance matches simulations and meets the project's design goals requires analyzing its behavior. Tasks can range from simple checks of rise times and pulse widths to sophisticated power loss analysis and investigation of noise sources.

The MSO/DPO3000 Series offers a comprehensive set of integrated analysis tools including waveform- and screen-based cursors, 29 automated measurements, advanced waveform math including arbitrary equation editing, FFT analysis, and trend plots for visually determining how a measurement is changing over time. Specialized application support for serial bus analysis, power supply design, and video design and development is also available.

For extended analysis, National Instrument's LabVIEW SignalExpress™ Tektronix Edition provides over 200 built-in functions including time and frequency domain analysis, limit testing, data logging, and customizable reports.

Wave Inspector controls provide unprecedented efficiency in viewing, navigating, and analyzing waveform data. Zip through your 5 Mpoint record by turning the outer pan control (1). Get from the beginning to end in seconds. See something of interest and want to see more details? Just turn the inner zoom control (2).

Wave Inspector® Navigation and Search

A 5 Mpoint record length represents thousands of screens of information. The MSO/DPO3000 Series enables you to find your event in seconds with Wave Inspector, the industry's best tool for navigation and search.

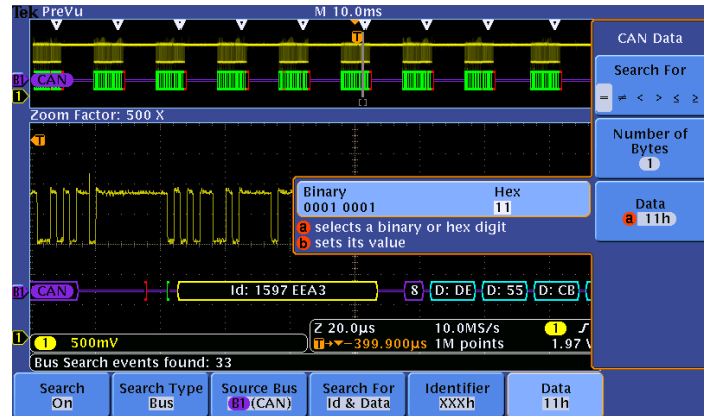

Wave Inspector offers the following innovative controls:

Zoom/Pan

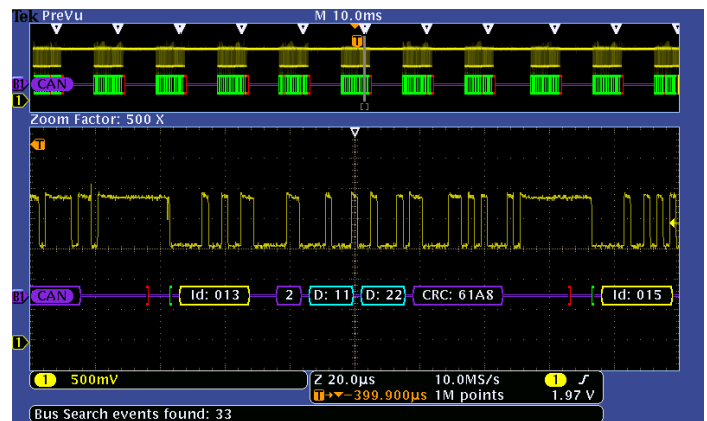

A dedicated, two-tier front-panel control provides intuitive control of both zooming and panning. The inner control adjusts the zoom factor (or zoom scale); turning it clockwise activates zoom and goes to progressively higher zoom factors, while turning it counterclockwise results in lower zoom factors and eventually turning zoom off. No longer do you need to navigate through multiple menus to adjust your zoom view. The outer control pans the zoom box across the waveform to quickly get to the portion of waveform you are interested in. The outer control also utilizes force-feedback to determine how fast to pan on the waveform. The farther you turn the outer control, the faster the zoom box moves. Pan direction is changed by simply turning the control the other way.

Play/Pause

A dedicated **Play/Pause** front-panel button scrolls the waveform across the display automatically while you look for anomalies or an event of interest. Playback speed and direction are controlled using the intuitive pan control. Once again, turning the control further makes the waveform scroll faster and changing direction is as simple as turning the control the other way.

Search step 1: You define what you would like to find.

Search step 2: Wave Inspector automatically searches through the record and marks each event with a hollow white triangle. You can then use the **Previous** and **Next** buttons to jump from one event to the next.

User Marks

Press the **Set Mark** front-panel button to place one or more marks on the waveform. Navigating between marks is as simple as pressing the **Previous** (←) and **Next** (→) buttons on the front panel.

Search Marks

The **Search** button allows you to automatically search through your long acquisition looking for user-defined events. All occurrences of the event are highlighted with search marks and are easily navigated to, using the front-panel **Previous** (←) and **Next** (→) buttons. Search types include edge, pulse width/glitch, runt, logic, setup and hold, rise/fall time parallel bus, and I²C, SPI, CAN, LIN, RS-232/422/485/UART, and I²S/LJ/RJ/TDM packet content.

Digital phosphor technology enables greater than 50,000 wfms/s waveform capture rate and real-time intensity grading on the MSO/DPO3000 Series.

Digital Phosphor Technology

The MSO/DPO3000 Series' digital phosphor technology provides you with fast insight into the real operation of your device. Its fast waveform capture rate – greater than 50,000 wfms/s – gives you a high probability of quickly seeing the infrequent problems common in digital systems: runt pulses, glitches, timing issues, and more.

Waveforms are superimposed with one another and waveform points that occur more frequently are intensified. This quickly highlights the events that over time occur more often or, in the case of infrequent anomalies, occur less often.

With the MSO/DPO3000 Series, you can choose infinite persistence or variable persistence, determining how long the previous waveform acquisitions stay on-screen. This allows you to determine how often an anomaly is occurring.

Mixed Signal Design and Analysis (MSO Series)

The MSO3000 Series Mixed Signal Oscilloscopes provide 16 digital channels. These channels are tightly integrated into the oscilloscope's user interface, simplifying operation and making it possible to solve mixed-signal issues easily.

The MSO Series provides 16 integrated digital channels enabling you to view and analyze time-correlated analog and digital signals.

With the color-coded digital waveform display, groups are created by simply placing digital channels together on the screen, allowing the digital channels to be moved as a group. You can set threshold values for each pod of eight channels, enabling support for up to two different logic families.

Color-coded Digital Waveform Display

The MSO3000 Series has redefined the way you view digital waveforms. One common problem shared by both logic analyzers and mixed-signal oscilloscopes is determining if data is a one or a zero when zoomed in far enough that the digital trace stays flat all the way across the display. The MSO3000 Series has color-coded digital traces, displaying ones in green and zeros in blue.

White edges indicate additional information is available by zooming in. As shown here, zooming in on the white edge reveals a hidden glitch.

The MagniVu high-resolution record provides 121.2 ps timing resolution, enabling you to make critical timing measurements on your digital waveforms.

The multiple transition detection hardware of the MSO3000 Series will show you a white edge on the display when the system detects multiple transitions. White edges indicate that more information is available by zooming in or acquiring at faster sampling rates. In most cases zooming in will reveal the pulse that was not viewable with the previous settings. If the white edge is still present after zooming in as far as possible, this indicates that increasing the sample rate on the next acquisition will reveal higher frequency information than the previous settings could acquire.

The MSO3000 Series simplifies channel setup by allowing you to group digital waveforms and enter waveform labels by using a USB keyboard. By simply placing digital waveforms next to each other, they form a group.

The P6316 MSO probe offers two eight-channel pods to simplify connecting to your device.

Once a group is formed, you can position all the channels contained in that group collectively. This greatly reduces the normal setup time associated with positioning channels individually.

MagniVu™ High-speed Acquisition

The main digital acquisition mode on the MSO3000 Series will capture up to 5 Mpoints at 500 MS/s (2 ns resolution). In addition to the main record, the MSO3000 provides an ultra high-resolution record called MagniVu which acquires 10,000 points at up to 8.25 GS/s (121.2 ps resolution). Both main and MagniVu waveforms are acquired on every trigger and can be switched between in the display at any time, running or stopped. MagniVu provides significantly finer timing resolution than comparable MSOs on the market, instilling confidence when making critical timing measurements on digital waveforms.

P6316 MSO Probe

This unique probe design offers two eight-channel pods, simplifying the process of connecting to the device-under-test. When connecting to square pins, the P6316 can connect directly to 8×2 square pin headers spaced on tenth-inch centers. When more attachment flexibility is required, you can use the included flying lead sets and grabbers to clip onto surface mount devices or test points. The P6316 offers outstanding electrical characteristics applying only 8 pF of capacitive loading with 101 kΩ input impedance.

Triggering on a specific data packet going across an I²C bus. The yellow waveform is clock and the blue waveform is data. A bus waveform provides decoded packet content including Start, Address, Read/Write, Data, and Stop.

Serial Triggering and Analysis (Optional)

On a serial bus, a single signal often includes address, control, data, and clock information. This can make isolating events of interest difficult. The MSO/DPO3000 Series offers a robust set of tools for debugging serial buses with automatic trigger, decode, and search for I²C, SPI, CAN, LIN, RS-232/422/485/UART, and I²S/LJ/RJ/TDM.

Serial Triggering

Trigger on packet content such as start of packet, specific addresses, specific data content, unique identifiers, etc. on popular serial interfaces such as I²C, SPI, CAN, LIN, RS-232/422/485/UART, and I²S/LJ/RJ/TDM.

Bus Display

Provides a higher-level, combined view of the individual signals (clock, data, chip enable, etc.) that make up your bus, making it easy to identify where packets begin and end and identifying subpacket components such as address, data, identifier, CRC, etc.

Bus Decoding

Tired of having to visually inspect the waveform to count clocks, determine if each bit is a 1 or a 0, combine bits into bytes, and determine the hex value? Let the oscilloscope do it for you! Once you've set up a bus, the

| Time | Identifier | DLC | Data | CRC | Missing Ack |
|---------|------------|-----|---------------------|------|-------------|
| 10.73ms | 519 | 4 | 4269 606C | 7744 | |
| 10.89ms | 1597EEB2 | 8 | AE4F FFF1 0272 DF6B | 2180 | |
| 11.17ms | 527DE32 | 1 | 11 | 7F30 | |
| 11.32ms | 140014 | 3 | 1122 33 | 5EDC | |
| 11.51ms | 160016 | 5 | 1122 3344 55 | 3911 | |

| 13.48ms | 1FF | 8 | C1C2 C3C4 B7D6 D4B4 | 690B | |
| 13.71ms | 1FFFFFFF | 8 | FFFF FFFF FFFF FFFF | 1B69 | |

Event table showing decoded Identifier, DLC, DATA, and CRC for every CAN packet in a long acquisition.

MSO/DPO3000 Series will decode each packet on the bus, and display the value in hex, binary, decimal (LIN only), signed decimal (I²S/LJ/RJ/TDM only), or ASCII (RS-232/422/485/UART only) in the bus waveform.

Event Table

In addition to seeing decoded packet data on the bus waveform itself, you can view all captured packets in a tabular view much like you would see in a software listing. Packets are time stamped and listed consecutively with columns for each component (Address, Data, etc.).

Search

Serial triggering is very useful for isolating the event of interest, but once you've captured it and need to analyze the surrounding data, what do you do? In the past, users had to manually scroll through the waveform counting and converting bits and looking for what caused the event. With the MSO/DPO3000 Series, you can have the oscilloscope automatically search through the acquired data for user-defined criteria including serial packet content. Each occurrence is highlighted by a search mark. Rapid navigation between marks is as simple as pressing the **Previous** (←) and **Next** (→) buttons on the front panel.

Safe operating area measurement. Automated power measurements enable quick and accurate analysis of common power parameters.

Power Analysis (Optional)

Ever increasing consumer demand for longer battery-life devices and for green solutions that consume less power require power-supply designers to characterize and minimize switching losses to improve efficiency. In addition, the supply's power levels, output purity, and harmonic feedback into the power line must be characterized to comply with national and regional power quality standards. Historically, making these and many other power measurements on an oscilloscope has been a long, manual, and tedious process. The MSO/DPO3000 Series optional power analysis tools greatly simplify these tasks, enabling quick and accurate analysis of power quality, switching loss, harmonics, safe operating area (SOA), modulation, ripple, and slew rate (di/dt, dv/dt). Completely integrated into the oscilloscope, the power analysis tools provide automated, repeatable power measurements with a touch of a button; no external PC or complex software setup is required.

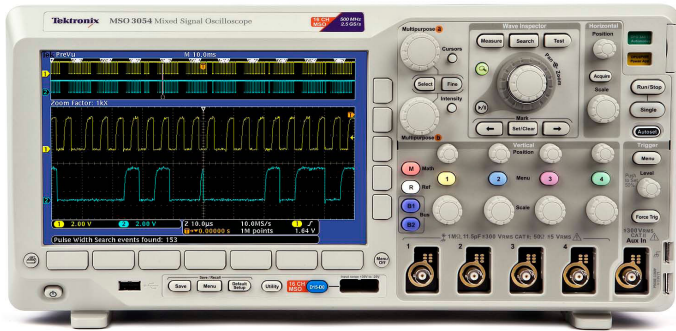

Viewing an NTSC video signal. Notice the intensity-graded view provided by the DPO's ability to represent time, amplitude, and distribution of amplitude over time.

Video Design and Development

Many video engineers have remained loyal to analog oscilloscopes, believing the intensity gradations on an analog display are the only way to see certain video waveform details. The MSO/DPO3000 Series fast waveform capture rate, coupled with its intensity-graded view of the signal, provides the same information-rich display as an analog oscilloscope, but with much more detail and all the benefits of digital scopes.

Standard features such as IRE and mV graticules, holdoff by fields, video polarity, and an Autoset smart enough to detect video signals, make the MSO/DPO3000 Series the easiest to use oscilloscope on the market for video applications. And with up to a 500 MHz bandwidth, four analog inputs, and a built-in 75 Ω input termination, the MSO/DPO3000 Series provides ample performance for analog and digital video use.

The MSO/DPO3000 Series video functionality is further extended with the optional DPO3VID video application module. DPO3VID provides the industry's most complete suite of HDTV and custom (nonstandard) video triggers.

The MSO/DPO3000 is designed to make your work easier. The large, high-resolution display shows intricate signal details. Dedicated front-panel controls simplify operation. A USB host port on the front panel allows you to easily transfer screenshots, instrument settings, and waveform data to a memory stick.

Designed to Make Your Work Easier

Large, High-resolution Display

The MSO/DPO3000 Series features a 9 inch (229 mm) widescreen, high-resolution (800 × 480 WVGA) display for seeing intricate signal details.

Dedicated Front-panel Controls

Per-channel vertical controls provide simple and intuitive operation. No longer do you need to share one set of vertical controls across all four channels.

Connectivity

A USB host port on the front panel enables easy transfer of screenshots, instrument settings, and waveform data to a memory stick. The rear panel contains a second USB host port and a USB device port for controlling the oscilloscope remotely from a PC or for connecting a USB keyboard. The USB device port can also be used to print directly to a PictBridge®-compatible printer. An integrated 10/100 Ethernet port enables easy connection to networks and a Video Out port allows the oscilloscope display to be exported to an external monitor or projector.

Compact Form Factor

A compact, portable form factor allows the MSO/DPO3000 Series to be easily moved between labs and, with a depth of just 5.8 inches (147 mm), it saves you valuable space on your test bench.

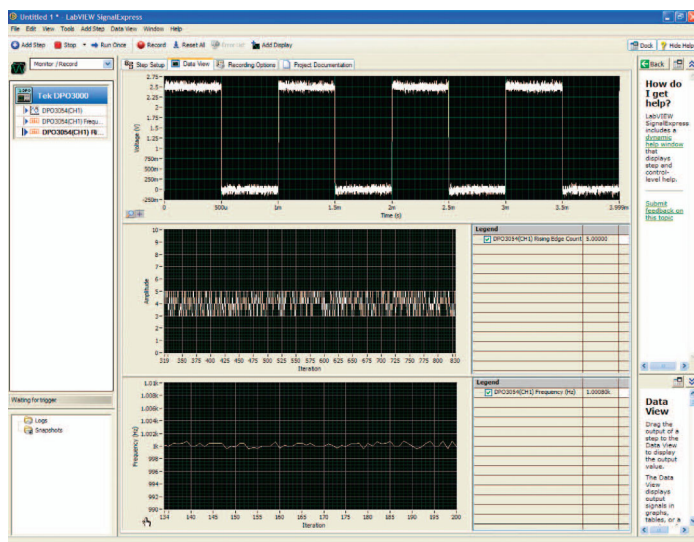

The MSO/DPO3000 Series' compact form factor frees up valuable space on your bench or desktop.

TekVPI probe interface simplifies connecting your probes to the oscilloscope.

TekVPI® Probe Interface

The TekVPI probe interface sets the standard for ease of use in probing. TekVPI probes feature status indicators and controls, as well as a probe menu button right on the comp box itself. This button brings up a probe menu on the oscilloscope display with all relevant settings and controls for the probe. The TekVPI interface enables direct attachment of current probes without requiring a separate power supply. TekVPI probes can be controlled remotely through USB, GPIB, or Ethernet, enabling more versatile solutions in ATE environments.

NI LabVIEW SignalExpress™ Tektronix Edition is a fully interactive measurement acquisition and analysis software developed jointly with National Instruments and optimized for the MSO/DPO Series.

Extended Analysis

Acquiring data and measurements from the MSO/DPO3000 Series is as simple as connecting a USB cable from the oscilloscope to your PC. Key software applications - NI LabVIEW SignalExpress™ Tektronix Edition LE, OpenChoice® Desktop, and Microsoft Excel and Word toolbars – are included standard with each oscilloscope to enable fast and easy direct communication with your Windows PC.

OpenChoice® Desktop software enables seamless connection between the oscilloscope and your PC.

NI LabVIEW SignalExpress Tektronix Edition LE enables you to instantly acquire, generate, analyze, compare, import, and save measurement data and signals using an intuitive drag-and-drop user interface that does not require any programming. The optional Professional Version offers over 200 built-in functions that provide additional signal processing, advanced analysis, sweeping, limit testing and user-defined step capabilities.

For simple tasks, the included OpenChoice Desktop enables fast and easy communication between the oscilloscope and your PC through USB or LAN for transferring settings, waveforms, and screen images.

Characteristics

Vertical System Analog Channels

| Characteristic | MSO3012 DPO3012 | MSO3014 DPO3014 | MSO3032 DPO3032 | MSO3034 DPO3034 | MSO3054 DPO3054 |
|--|--|--------------------|--------------------|--------------------|--------------------|
| Input Channels | 2 | 4 | 2 | 4 | 4 |
| Analog Bandwidth (-3 dB) | 100 MHz | 100 MHz | 300 MHz | 300 MHz | 500 MHz |
| Calculated Rise Time 5 mV/div (typical) | 3.5 ns | 3.5 ns | 1.17 ns | 1.17 ns | 700 ps |
| Hardware Bandwidth Limits | 20 MHz | | 20 MHz, 150 MHz | | |
| Input Coupling | AC, DC, GND | | | | |
| Input Impedance | 1 MΩ ±1%, 75 Ω ±1%, 50 Ω ±1% | | | | |
| Input Sensitivity Range, 1 MΩ | 1 mV/div to 10 V/div | | | | |
| Input Sensitivity Range, 75 Ω, 50 Ω | 1 mV/div to 1 V/div | | | | |
| Vertical Resolution | 8 bits (11 bits with Hi Res) | | | | |
| Maximum Input Voltage, 1 MΩ | 300 V _{RMS} with peaks ≤ ±450 V | | | | |
| Maximum Input Voltage, 75 Ω, 50 Ω | 5 V _{RMS} with peaks ≤ ±20 V | | | | |
| DC Gain Accuracy | ±1.5% for 5 mV/div and above ±2.0% for 2 mV/div ±2.5% for 1 mV/div | | | | |
| Channel-to-Channel Isolation (Any Two Channels at Equal Vertical Scale) | ≥100:1 at ≤100 MHz and ≥30:1 at >100 MHz up to the rated BW | | | | |

Offset Range

| Range | 1 M Ω | 50 Ω , 75 Ω |
|--------------------------|--------------|---------------------------|
| 1 mV/div to 99.5 mV/div | \pm 1 V | \pm 1 V |
| 100 mV/div to 995 mV/div | \pm 10 V | \pm 5 V |
| 1 V/div | \pm 100 V | \pm 5 V |
| 1.01 V/div to 10 V/div | \pm 100 V | NA |

Vertical System Digital Channels

| Characteristic | All MSO3000 Models |
|------------------------------|---|
| Input Channels | 16 Digital (D15 to D0) |
| Thresholds | Threshold per set of 8 channels |
| Threshold Selections | TTL, CMOS, ECL, PECL, User Defined |
| User-defined Threshold Range | -15 V to +25 V |
| Maximum Input Voltage | -20 V to +30 V |
| Threshold Accuracy | \pm (100 mV +3% of threshold setting) |
| Maximum Input Dynamic Range | 50 V _{pk-pk} (threshold setting dependent) |
| Minimum Voltage Swing | 500 mV _{pk-pk} |
| Input Impedance | 101 k Ω |
| Probe Loading | 8 pF |
| Vertical Resolution | 1 bit |

Horizontal System Analog Channels

| Characteristic | All MSO3000 Models All DPO3000 Models |
|--|--|
| Maximum Sample Rate (all channels) | 2.5 GS/s |
| Maximum Record Length (all channels) | 5 Mpoints |
| Maximum Duration of Time Captured at Highest Sample Rate (all channels) | 2 ms |
| Time-base Range (s/div) | 1 ns to 1000 s |
| Time-base Delay Time Range | -10 divisions to 5000 s |
| Channel-to-Channel Deskew Range | \pm 100 ns |
| Time-base Accuracy | \pm 10 ppm over any \geq 1 ms interval |

Horizontal System Digital Channels

| Characteristic | All MSO3000 Models |
|--|------------------------------------|
| Maximum Sample Rate (Main, all channels) | 500 MS/s (2 ns resolution) |
| Maximum Record Length (Main, all channels) | 5 Mpoints |
| Maximum Sample Rate (MagnaVu, all channels) | 8.25 GS/s (121.2 ps resolution) |
| Maximum Record Length (MagnaVu, all channels) | 10 kpoints centered on the trigger |
| Minimum Detectable Pulse Width | 2.0 ns |
| Channel-to-Channel Skew | 500 ps typical |

Trigger System

| Characteristic | Description |
|-----------------------|--|
| Main Trigger Modes | Auto, Normal, and Single |
| Trigger Coupling | DC, AC, HF reject (attenuates >50 kHz), LF reject (attenuates <50 kHz), noise reject (reduces sensitivity) |
| Trigger Holdoff Range | 20 ns to 8 s |

Trigger Sensitivity

| Characteristic | Description |
|----------------------------|---|
| Internal DC Coupled | 0.5 div from DC to 50 MHz, increasing to 1 div at rated bandwidth |
| External (Auxiliary Input) | 200 mV from DC to 50 MHz increasing to 500 mV at 250 MHz |

Trigger Level Range

| Characteristic | Description |
|----------------------------|------------------------------------|
| Any Channel | ±8 divisions from center of screen |
| External (Auxiliary Input) | ±8 V |

Trigger Modes

| Mode | Description |
|---|--|
| Edge | Positive or negative slope on any channel or front-panel auxiliary input. Coupling includes DC, AC, HF reject, LF reject, and noise reject. |
| Sequence (B-trigger) | Trigger Delay by Time - 8 ns to 8 s. Or Trigger Delay by Events - 1 to 9,999,999 events. |
| Pulse Width | Trigger on width of positive or negative pulses that are >, <, =, or ≠ a specified period of time. |
| Runt | Trigger on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again. |
| Logic | Trigger when any logical pattern of channels goes false or stays true for specified period of time. Any input can be used as a clock to look for the pattern on a clock edge. Pattern (AND, OR, NAND, NOR) specified for all analog and digital input channels defined as High, Low, or Don't Care. |
| Setup and Hold | Trigger on violations of both setup time and hold time between clock and data present on any of the input channels. |
| Rise/Fall Time | Trigger on pulse edge rates that are faster or slower than specified. Slope may be positive, negative, or either. |
| Video | Trigger on all lines, odd, even, or all fields on NTSC, PAL, and SECAM video signals. |
| Extended Video (optional) | Trigger on 480p/60, 576p/50, 720p/30, 720p/50, 720p/60, 875i/60, 1080i/50, 1080i/60, 1080p/24, 1080p/24sF, 1080p/25, 1080p/30, 1080p/50, 1080p/60, and custom bi-level and tri-level sync video standards. |
| I ² C (optional) | Trigger on Start, Repeated Start, Stop, Missing ACK, Address (7 or 10 bit), Data, or Address and Data on I ² C buses up to 10 Mb/s. |
| SPI (optional) | Trigger on SS, MOSI, MISO, or MOSI and MISO on SPI buses up to 10.0 Mb/s. |
| CAN (optional) | Trigger on Start of Frame, Frame Type (data, remote, error, overload), Identifier (standard or extended), Data, Identifier and Data, End of Frame, Missing ACK, or Bit Stuffing Error on CAN signals up to 1 Mb/s. Data can be further specified to trigger on ≤, <, =, >, ≥, or ≠ a specific data value. User-adjustable sample point is set to 50% by default. |
| I ² S/LJ/RJ/TDM (optional) | Trigger on Word Select, Frame Sync, or Data. Data can be further specified to trigger on ≤, <, =, >, ≥, ≠ a specific data value, or inside or outside of a range. Maximum data rate for I ² S/LJ/RJ is 12.5 Mb/s. Maximum data rate for TDM is 25 Mb/s. |
| RS-232/422/485/UART (optional) | Trigger on Tx Start Bit, Rx Start Bit, Tx End of Packet, Rx End of Packet, Tx Data, Rx Data, Tx Parity Error, and Rx Parity Error up to 10 Mb/s. |
| LIN (optional) | Trigger on Sync, Identifier, Data, Identifier and Data, Wakeup Frame, Sleep Frame, Errors such as Sync, Parity, or Checksum Errors up to 1 Mb/s (by LIN definition, 20 kb/s). |
| Parallel (available on MSO models only) | Trigger on a parallel bus data value. Parallel bus can be from 1 to 16 bits in size. Binary and Hex radices are supported. |

Acquisition Modes

| Mode | Description |
|-------------|--|
| Sample | Acquire sampled values. |
| Peak Detect | Captures glitches as narrow as 2 ns at all sweep speeds. |
| Averaging | From 2 to 512 waveforms included in average. |
| Envelope | Min-max envelope reflecting Peak Detect data over multiple acquisitions. |
| Hi Res | Real-time boxcar averaging reduces random noise and increases vertical resolution. |
| Roll | Scrolls waveforms right to left across the screen at sweep speeds slower than or equal to 40 ms/div. |

Waveform Measurements

| Measurement | Description |
|------------------------|---|
| Cursors | Waveform and Screen. |
| Automatic Measurements | 29, of which up to four can be displayed on-screen at any one time. Measurements include: Period, Frequency, Delay, Rise Time, Fall Time, Positive Duty Cycle, Negative Duty Cycle, Positive Pulse Width, Negative Pulse Width, Burst Width, Phase, Positive Overshoot, Negative Overshoot, Peak to Peak, Amplitude, High, Low, Max, Min, Mean, Cycle Mean, RMS, Cycle RMS, Positive Pulse Count, Negative Pulse Count, Rising Edge Count, Falling Edge Count, Area and Cycle Area. |
| Measurement Statistics | Mean, Min, Max, Standard Deviation. |
| Reference Levels | User-definable reference levels for automatic measurements can be specified in either percent or units. |
| Gating | Isolate the specific occurrence within an acquisition to take measurements on, using either the screen, or waveform cursors. |

Power Measurements (Optional)

| Measurement | Description |
|------------------------------|---|
| Power Quality Measurements | V_{RMS} , $V_{Crest\ Factor}$, Frequency, I_{RMS} , $I_{Crest\ Factor}$, True Power, Apparent Power, Reactive Power, Power Factor, Phase Angle. |
| Switching Loss Measurements | Power Loss: T_{on} , T_{off} , Conduction, Total. Energy Loss: T_{on} , T_{off} , Conduction, Total. |
| Harmonics | THD-F, THD-R, RMS measurements. Graphical and table displays of harmonics. Test to IEC61000-3-2 Class A and MIL-STD-1399. |
| Ripple Measurements | V_{ripple} and I_{ripple} . |
| Modulation Analysis | Graphical display of +Pulse Width, -Pulse Width, Period, Frequency, +Duty Cycle, and -Duty Cycle modulation types. |
| Safe Operating Area | Graphical display and mask testing of switching device safe operating area measurements. |
| dV/dt and dI/dt Measurements | Cursor measurements of slew rate. |

Waveform Math

| Characteristic | Description |
|----------------|--|
| Arithmetic | Add, subtract, multiply, and divide waveforms. |
| Math Functions | Integrate, Differentiate, FFT. |
| FFT | Spectral magnitude. Set FFT Vertical Scale to Linear RMS or dBV RMS, and FFT Window to Rectangular, Hamming, Hanning, or Blackman-Harris. |
| Advanced Math | Define extensive algebraic expressions including waveforms, reference waveforms, math functions (FFT, Intg, Diff, Log, Exp, Sqrt, Sine, Cosine, Tangent), scalars, up to two user-adjustable variables and results of parametric measurements (Period, Freq, Delay, Rise, Fall, PosWidth, NegWidth, BurstWidth, Phase, PosDutyCycle, NegDutyCycle, PosOverShoot, NegOverShoot, PeakPeak, Amplitude, RMS, CycleRMS, High, Low, Max, Min, Mean, CycleMean, Area, CycleArea, and trend plots), e.g., $(Intg(Ch1 - Mean(Ch1)) \times 1.414 \times VAR1)$. |

Software

| Product | Description |
|---|--|
| NI LabVIEW SignalExpress™ Tektronix Edition | A fully interactive measurement software environment optimized for the MSO/DPO3000 Series, enables you to instantly acquire, generate, analyze, compare, import, and save measurement data and signals using an intuitive drag-and-drop user interface that does not require any programming. Standard MSO/DPO3000 Series support for acquiring, controlling, viewing, and exporting your live signal data is permanently available through the software. The full version (SIGEXPTE) adds additional signal processing, advanced analysis, mixed signal, sweeping, limit testing, and user-defined step capabilities and is available for a 30-day trial period standard with each instrument. |
| OpenChoice® Desktop | Enables fast and easy communication between a Windows PC and the MSO/DPO3000 Series. Transfer and save settings, waveforms, measurements, and screen images. Included Word and Excel toolbars automate the transfer of acquisition data and screen images from the oscilloscope into Word and Excel for quick reporting or further analysis. |
| IVI Driver | Provides a standard instrument programming interface for common applications such as LabVIEW, LabWindows/CVI, Microsoft .NET, and MATLAB. |
| eScope | Enables control of the MSO/DPO3000 Series over a network connection through a standard web browser. Simply enter the IP address or network name of the oscilloscope and a web page will be served to the browser. |

Display Characteristics

| Characteristic | Description |
|-------------------------------|--|
| Display Type | 9 in. (228.6 mm) wide format liquid crystal TFT color display. |
| Display Resolution | 800 horizontal × 480 vertical pixels (WVGA). |
| Waveform Styles | Vectors, Dots, Variable Persistence, Infinite Persistence. |
| Graticules | Full, Grid, Cross Hair, Frame, IRE and mV. |
| Format | YT and XY. |
| Maximum Waveform Capture Rate | >50,000 wfm/s. |

Input/Output Ports

| Port | Description |
|--------------------------------|---|
| USB 2.0 High-speed Host Port | Supports USB mass storage devices, printers, and keyboards. One port available on rear panel and one on front panel. |
| USB 2.0 High-speed Device Port | Rear-panel connector allows for communication/control of oscilloscope through USBTMC or GPIB with a TEK-USB-488, and direct printing to all PictBridge-compatible printers. |
| LAN Port | RJ-45 connector, supports 10/100Base-T. |
| Video Out Port | DB-15 female connector, connect to show the oscilloscope display on an external monitor or projector. |
| Auxiliary Input | Front-panel BNC connector. Input Impedance 1 MΩ. Max input 300 V _{RMS} CAT II with peaks ≤ ±450 V. |
| Probe Compensator Output | Front-panel pins Amplitude: 2.5 V Frequency: 1 kHz |
| Trigger Out | Rear-panel BNC connector, provides a negative-polarity pulse when the oscilloscope triggers. |
| Kensington Style Lock | Rear-panel security slot connects to standard Kensington-style lock. |

Power Source

| Characteristic | Description |
|--|--|
| Power Source Voltage | 85 to 265 V ±10% |
| Power Source Frequency | 45 to 440 Hz (85 to 265 V) |
| Power Consumption | 120 W maximum |
| Optional TekVPI® External Power Supply*1 | Output Voltage: 12 V Output Current: 5 A Power Consumption: 50 W |

*1 Required when total oscilloscope probe power usage exceeds 20 W.

Physical Characteristics

| Dimensions | mm | in. |
|-------------------------|--|------|
| Height | 203.2 | 8 |
| Width | 416.6 | 16.4 |
| Depth | 147.3 | 5.8 |
| Weight | kg | lb. |
| Net | 4.17 | 9.2 |
| Shipping | 8.62 | 19 |
| Rackmount Configuration | 5U | |
| Cooling Clearance | 2 in. (51 mm) required on left side and rear of instrument | |

Environmental

| Characteristic | Description |
|-------------------------------|--|
| Temperature | |
| Operating | 0 °C to +50 °C |
| Nonoperating | -40 °C to +71 °C |
| Humidity | |
| Operating | High: 30 °C to 50 °C, 5% to 45% Relative Humidity Low: 0 °C to 30 °C, 5% to 95% Relative Humidity |
| Nonoperating | High: 30 °C to 50 °C, 5% to 45% Relative Humidity Low: 0 °C to 30 °C, 5% to 95% Relative Humidity |
| Altitude | |
| Operating | 3,000 meters (9,843 feet) |
| Nonoperating | 12,000 meters (39,370 feet) |
| Random Vibration | |
| Operating | 0.31 G _{RMS} from 5 to 500 Hz, 10 minutes each axis, 3 axes, 30 minutes total |
| Nonoperating | 2.46 G _{RMS} from 5 to 500 Hz, 10 minutes each axis, 3 axes, 30 minutes total |
| Regulatory | |
| Electromagnetic Compatibility | EC Council Directive 2004/108/EC |
| Safety | UL61010-1:2004; CAN/CSA C22.2 No. 61010.1-04; EN61010-1:2001; IEC61010-1:2001 |

Ordering Information

DPO3000 Models

| Product | Description |
|---------|--|
| DPO3012 | 100 MHz, 2.5 GS/s, 5M record length, 2-channel digital phosphor oscilloscope |
| DPO3014 | 100 MHz, 2.5 GS/s, 5M record length, 4-channel digital phosphor oscilloscope |
| DPO3032 | 300 MHz, 2.5 GS/s, 5M record length, 2-channel digital phosphor oscilloscope |
| DPO3034 | 300 MHz, 2.5 GS/s, 5M record length, 4-channel digital phosphor oscilloscope |
| DPO3054 | 500 MHz, 2.5 GS/s, 5M record length, 4-channel digital phosphor oscilloscope |

MSO3000 Models

| Product | Description |
|---------|---|
| MSO3012 | 100 MHz, 2.5 GS/s, 5M record length, 2+16 channel mixed-signal oscilloscope |
| MSO3014 | 100 MHz, 2.5 GS/s, 5M record length, 4+16 channel mixed-signal oscilloscope |
| MSO3032 | 300 MHz, 2.5 GS/s, 5M record length, 2+16 channel mixed-signal oscilloscope |
| MSO3034 | 300 MHz, 2.5 GS/s, 5M record length, 4+16 channel mixed-signal oscilloscope |
| MSO3054 | 500 MHz, 2.5 GS/s, 5M record length, 4+16 channel mixed-signal oscilloscope |

All Models Include: One P6139A 500 MHz, 10x Passive Probe per Analog Channel, Front Cover (200-5052-xx), User Manual, Documentation CD (063-4104-xx), OpenChoice® Desktop Software, NI LabVIEW SignalExpress™ Tektronix Edition LE Software, Calibration Certificate Documenting Traceability to National Metrology Institute(s) and ISO9001 Quality System Registration, Power Cord, Accessory Pouch (016-2008-xx), Three-year Warranty. Please specify power plug and manual language version when ordering.

MSO Models also Include: One P6316 16-channel logic probe and accessory kit.

Application Modules

| Modules | Description |
|-----------|---|
| DPO3AUDIO | Audio Serial Triggering and Analysis Module. Enables triggering on packet-level information on I ² S, Left Justified, Right Justified, TDM, and custom audio buses, as well as analytical tools such as digital views of the signal, bus views, packet decoding, search tools, and packet decode tables with time stamp information. |
| DPO3AUTO | Automotive Serial Triggering and Analysis Module. Enables triggering on packet-level information on CAN bus and LIN bus as well as analytical tools such as digital views of the signal, bus views, packet decoding, search tools, and packet decode tables with time stamp information. |
| DPO3COMP | Computer Serial Triggering and Analysis Module. Enables triggering on packet-level information on RS-232/422/485/UART buses as well as analytical tools such as digital views of the signal, bus views, packet decoding, search tools, and packet decode tables with time stamp information. |
| DPO3EMBD | Embedded Serial Triggering and Analysis Module. Enables triggering on packet-level information on I ² C and SPI buses as well as analytical tools such as digital views of the signal, bus views, packet decoding, search tools, and packet decode tables with time stamp information. Only two-wire SPI support available on DPO3012, DPO3032 models. |
| DPO3PWR | Power Analysis Module. Enables quick and accurate analysis of power quality, switching loss, harmonics, safe operating area (SOA), modulation, ripple, and slew rate (dI/dt, dV/dt). |
| DPO3VID | HDTV and Custom (nonstandard) Video Triggering Module. |

Instrument Options

Power Plug Options

| Option | Description |
|----------|----------------|
| Opt. A0 | North America |
| Opt. A1 | Universal Euro |
| Opt. A2 | United Kingdom |
| Opt. A3 | Australia |
| Opt. A5 | Switzerland |
| Opt. A6 | Japan |
| Opt. A10 | China |
| Opt. A11 | India |
| Opt. A99 | No power cord |

Language Options*2

| Option | Description |
|----------|----------------------------|
| Opt. L0 | English manual |
| Opt. L1 | French manual |
| Opt. L2 | Italian manual |
| Opt. L3 | German manual |
| Opt. L4 | Spanish manual |
| Opt. L5 | Japanese manual |
| Opt. L6 | Portuguese manual |
| Opt. L7 | Simplified Chinese manual |
| Opt. L8 | Traditional Chinese manual |
| Opt. L9 | Korean manual |
| Opt. L10 | Russian manual |
| Opt. L99 | No manual |

*2 Language options include translated front-panel overlay for the selected language(s).

Service Options*3

| Option | Description |
|----------|--|
| Opt. C3 | Calibration Service 3 years. |
| Opt. C5 | Calibration Service 5 years. |
| Opt. CA1 | Provides a single calibration event, or coverage for the designated calibration interval, whichever comes first. |
| Opt. D1 | Calibration Data Report. |
| Opt. D3 | Calibration Data Report 3 years (with Opt. C3). |
| Opt. D5 | Calibration Data Report 5 years (with Opt. C5). |
| Opt. R5 | Repair Service 5 years (including warranty). |

*3 Probes and accessories are not covered by the oscilloscope warranty and Service Offerings. Refer to the datasheet of each probe and accessory model for its unique warranty and calibration terms.

Recommended Probes

| Probe | Description |
|---------------|---|
| TAP1500 | 1.5 GHz TekVPI® active voltage probe. |
| TAP1500X2 | Bundle of Two 1.5 GHz Active Probes, single ended with TekVPI Interface. |
| TDP0500 | 500 MHz TekVPI differential voltage probe with ± 42 V differential input voltage. |
| TDP1000 | 1 GHz TekVPI differential voltage probe with ± 42 V differential input voltage. |
| TCP0030 | 120 MHz TekVPI 30 Ampere AC/DC current probe. |
| TCP0150 | 20 MHz TekVPI 150 Ampere AC/DC current probe. |
| TCPA300/400*4 | Current measurement systems amplifier. |
| P5200 | 1.3 kV, 25 MHz high-voltage differential probe. |
| P5205*4 | 1.3 kV, 100 MHz high-voltage differential probe. |
| P5210*4 | 5.6 kV, 50 MHz high-voltage differential probe. |
| P5100 | 2.5 kV, 100x high-voltage passive probe. |
| ADA400A*4 | 100x, 10x, 1x, 0.1x high-gain differential amplifier. |
| NEX-HD2HEADER | Mictor connector breakout to 0.1 in. header pins. |

*4 Requires TekVPI® to TekProbe BNC adapter (TPA-BNC).

Recommended Accessories

| Accessory | Description |
|---------------|--|
| 071-2667-xx | Service Manual (English only) |
| TPA-BNC | TekVPI to TekProbe BNC adapter |
| TEK-DPG | TekVPI Deskew Pulse Generator Signal Source |
| 067-1686-xx | Power Measurement Deskew and Calibration Fixture |
| 119-7465-xx*5 | TekVPI® External Power Supply |
| SIGEXPTE | NI LabVIEW SignalExpress Tektronix Edition Software – Full Version |
| FPGAView-xx | MSO Support for Altera and Xilinx FPGAs |
| TEK-USB-488 | GPIO-to-USB adapter |
| ACD4000 | Soft Transit Case |
| HCTEK4321 | Hard Transit Case (requires ACD4000) |
| RMD3000 | Rackmount Kit |

*5 Required when total oscilloscope probe power usage exceeds 20 W. Power cord not included.

Warranty

Three-year warranty covering all parts and labor, excluding probes.

Product(s) are manufactured in ISO registered facilities.

Product(s) complies with IEEE Standard 488.1-1987, RS-232-C, and with Tektronix Standard Codes and Formats.
