Circuit breaker

Tripping characteristics
 $I_n < 3 A$

Tripping characteristics
 $I_n \ge 3... \le 15 A$

The above tripping characteristics apply to symmetrical overloads on the two poles.

At asymmetric overloads on two pole types the tripping current will be increased by factor **1.05** (TC-2).

Effect of ambient temperature

The unit is calibrated for an ambient temperature of +23 °C. To determine the rated current for lower or higher ambient temperature, use a correction factor from the table below.

* Temperature must be measured at the rear of the breaker next to the terminals after equipment operating temperature has been reached.

* Ambient temperature [°C]	Correction factor
-25	0.79
-20	0.81
0	0.90
+23	1.00
+40	1.03
+50	1.04
+60	1.06

Example:

Rated current at +23 °C 10 A
 Ambient temperature +60 °C
 Correction factor 1.06
 Chosen rated current at +60 °C
 ambient temperature: **10 A x 1.06 = 10.6 A**
