

FEATURES

- **1.8V to 5.5V Supply Voltage**
- **Single and Dual Transceivers**
- **High-Speed Operation**
 - 1Mbps for 250pF/3kΩ Load (LTC2802, LTC2804)
 - 250kbps for 1nF/3kΩ Load
 - 100kbps for 2.5nF/3kΩ TIA/EIA-232-F Load
- **Low-Power 1μA Shutdown and 15μA Receivers-Active Modes**
- No Damage or Latch-Up to ±10kV ESD on RS-232 Interface
- Logic Supply Pin for Easy Level-Shifting to UART or Microprocessor
- Low-Latency Output Enable Allows Line Sharing and Half-Duplex Operation
- True RS-232 Compliant Output Levels
- Small Footprint:
 - LTC2801/LTC2802 4mm × 3mm DFN Package
 - LTC2803/LTC2804 Narrow SSOP-16 and 5mm × 3mm DFN Packages

APPLICATIONS

- Battery-Powered Systems
- Computers and Consumer Electronics
- Diagnostic Ports

DESCRIPTION

The LTC[®]2801/LTC2802/LTC2803/LTC2804 are single and dual RS-232 transceivers in narrow SSOP and chip-scale DFN packages. All operate over a supply range of 1.8V to 5.5V, which permits operation directly from two alkaline, NiCd or NiMH cells. An integrated DC-to-DC converter generates power supplies for driving RS-232 levels. A logic supply pin allows easy interfacing with different logic levels independent of the DC-DC supply.

These parts are compatible with the TIA/EIA-232-F standard. Driver outputs are protected from overload and can be shorted to ground or up to ±15V without damage. To extend battery life, receivers can be kept active, operating at reduced speed, with only 15μA current. In shutdown mode, current is further reduced to 1μA. Line sharing and half-duplex operation are also supported.

PRODUCT SELECTION GUIDE

| PART NUMBER | DRIVERS | RECEIVERS | PACKAGE |
|-------------|---------|-----------|--------------|
| LTC2801 | 1 | 1 | 12-Lead DFN |
| LTC2802 | 1 | 1 | 12-Lead DFN |
| LTC2803 | 2 | 2 | 16-Lead DFN |
| LTC2803-1 | 2 | 2 | 16-Lead SSOP |
| LTC2804 | 2 | 2 | 16-Lead DFN |
| LTC2804-1 | 2 | 2 | 16-Lead SSOP |

TYPICAL APPLICATION

LTC2802 at 1.8V and 1Mbps

LTC2801/LTC2802/ LTC2803/LTC2804

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Input Supplies

V_{CC} -0.3V to 7V

V_L -0.3V to 6.7V

Generated Supplies

V_{DD} V_{CC} -0.3V to 7.5V

V_{EE} 0.3V to -7.5V

$V_{DD} - V_{EE}$ 14V

SW -0.3V to $V_{DD} + 0.3V$

CAP +0.3V to $V_{EE} - 0.3V$

TIN, T1IN, T2IN, MODE -0.3V to 7V

PS, ON/OFF -0.3V to ($V_L + 0.3V$)

RIN, R1IN, R2IN -25V to 25V

TOUT, T1OUT, T2OUT -15V to 15V

ROUT, R1OUT, R2OUT -0.3V to ($V_L + 0.3V$)

Operating Temperature

LTC280XC 0°C to 70°C

LTC280XI -40°C to 85°C

Storage Temperature Range -65°C to 125°C

Lead Temperature (Soldering, 10 sec)

GN Package 300°C

BLOCK DIAGRAM

APPLICATIONS INFORMATION

Overview

The LTC2801 family of RS-232 transceivers operates on a V_{CC} supply of 1.8V to 5.5V, utilizing a switching regulator to generate the necessary higher voltage rails for the drivers. The transceivers interface with logic operating on any supply from 1.8V to 5.5V, independent of the V_{CC} voltage. Depending on the device, one or two control pins are available to invoke Shutdown, Receiver Active and Driver Disable features.

DC-DC Converter

The on-chip DC-DC converter operates from the V_{CC} input, generating a 7V V_{DD} supply and a charge pumped $-6.3V$ V_{EE} supply, as shown in Figure 6. V_{DD} and V_{EE} power the output stage of the drivers and are regulated to levels that guarantee greater than $\pm 5V$ output swing. The DC-DC converter requires a 10 μ H inductor (L1) and a bypass capacitor (C4) of at least 1 μ F. The recommended size for the charge pump capacitor (C1) is 220nF and for the storage capacitors (C2 and C3) is 1 μ F. Larger storage capacitors up to 4.7 μ F may be used if C1 is kept at 20% to 50% their size and C4 is also scaled. Locate C1-C4 close to their associated pins.

Figure 6. DC/DC Converter and Recommended Bypassing

V_L Logic Supply

A separate logic supply pin V_L allows the LTC2801 family to interface with any logic signal from 1.8V to 5.5V, as shown in Figure 7. Simply connect the desired logic supply to V_L . There is no interdependency between V_{CC} and V_L ; they may simultaneously operate at any voltage from 1.8V to 5.5V and sequence in any order. If V_L is powered separately from V_{CC} , bypass V_L with a 220nF capacitor (C5).

Figure 7. V_{CC} and V_L Are Independent

Power-Saving Modes

When the DC-DC converter and drivers are turned off (PS or ON/OFF = logic low), V_{CC} supply current is reduced to 1 μ A. Tables 1 and 2 summarize the modes for each device.

In Shutdown mode, V_L supply current is reduced to 1 μ A, and both receiver and driver outputs assume a high impedance state.

In Receivers Active mode, the quiescent V_L supply current is reduced to 15 μ A and the driver outputs assume a high impedance state. The receivers operate at a reduced rate (typically 100 kbps) with hysteresis turned off.

Half-Duplex Operation

When the DC-DC converter is kept on (PS = logic high), MODE serves as a low-latency driver enable for half-duplex operation. Each driver is enabled and disabled in less than 2 μ s, while each receiver remains continuously active. This mode of operation is illustrated in Figures 15-17.

Battery Operation

To maximize battery life, connect V_{CC} (and L1) directly to the unregulated battery voltage and V_L to the regulated supply, as shown in Figure 22. This configuration typically minimizes conversion loss while providing compatibility with system logic levels.

Inductor Selection

A 10 μ H inductor with a saturation current (I_{SAT}) rating of at least 200mA and low DCR (copper wire resistance) is recommended. Some small inductors meeting these requirements are listed in Table 3.

APPLICATIONS INFORMATION

Table 3. Recommended Inductors

| PART NUMBER | I _{SAT} (mA) | MAX DCR (Ω) | SIZE (mm) | MANUFACTURER |
|----------------|-----------------------|-------------|----------------|--------------------------------|
| LQH2MCN100K02L | 225 | 1.2 | 2 × 1.6 × 0.95 | Murata www.murata.com |
| LBC2016T100K | 245 | 0.85 | 2 × 1.6 × 1.6 | Taiyo Yuden www.t-yuden.com |
| FSLB2520-100K | 220 | 1.1 | 2.5 × 2 × 1.6 | Toko www.tokoam.com |

Capacitor Selection

The small size of ceramic capacitors makes them ideal for the LTC2801 family. X5R and X7R (preferred) types are recommended because their ESR is low and they retain their capacitance over relatively wide voltage and temperature ranges. Use a voltage rating of at least 10V.

Inrush Current and Supply Overshoot Precaution

In certain applications, such as battery-operated and wall-adaptor devices, fast supply slew rates are generated when power is connected. If V_{CC}'s voltage is greater than 4.5V and its rise time is faster than 10μs, the pins V_{DD} and SW can exceed their ABS MAX values during start-up. When supply voltage is applied to V_{CC}, the voltage difference between V_{CC} and V_{DD} generates inrush current

Figure 8. Supply Overshoot Protection for Input Supplies of 4.5V or Higher

flowing through inductor L1 and capacitors C1, C2. The peak inrush current must not exceed 2A. To avoid this condition, add a 1Ω resistor as shown in Figure 8. This precaution is not relevant for supply voltages below 4.5V or rise times longer than 10μs.

Board Layout

The board layout should minimize the length and area of the SW and CAP traces. Suggested compact layouts for the LTC2801 family are shown in Figure 9 (a) and (b).

TYPICAL APPLICATIONS

DE/UE Package 12-Lead Plastic DFN (4mm × 3mm) (Reference LTC DWG # 05-08-1695 Rev D)

NOTE:

1. DRAWING PROPOSED TO BE A VARIATION OF VERSION (WGED) IN JEDEC PACKAGE OUTLINE MO-229
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE

DHC Package 16-Lead Plastic DFN (5mm × 3mm) (Reference LTC DWG # 05-08-1706)

NOTE:

1. DRAWING PROPOSED TO BE MADE VARIATION OF VERSION (WJED-1) IN JEDEC PACKAGE OUTLINE MO-229
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE

PACKAGE DESCRIPTION

GN Package
16-Lead Plastic SSOP (Narrow .150 Inch)
(Reference LTC DWG # 05-08-1641)

NOTE:

1. CONTROLLING DIMENSION: INCHES

2. DIMENSIONS ARE IN $\frac{\text{INCHES}}{\text{MILLIMETERS}}$

3. DRAWING NOT TO SCALE

DIMENSION DOES NOT INCLUDE MOLD FLASH. MOLD FLASH SHALL NOT EXCEED 0.006^ (0.152mm) PER SIDE

**DIMENSION DOES NOT INCLUDE INTERLEAD FLASH. INTERLEAD FLASH SHALL NOT EXCEED 0.010^* (0.254mm) PER SIDE

LTC2801/LTC2802/ LTC2803/LTC2804

TYPICAL APPLICATION
