SH250-CFast

Overview

Apacer SH250-CFast 2.0 is the latest enhancement of conventional CFast form factor that delivers various technological advantages. It utilizes 3D NAND for higher capacity up to 160GB and provides more power efficiency than 2D NAND. This new flash memory card comes with SATA 6.0 Gbps interface for higher performance and consists of SATA-based 7-pin signal segment and 17-pin for power and control purposes. Designed without DRAM on the internal controlling unit, SH250-CFast ensures data integrity by preventing data loss during a sudden power outage.

For data efficiency, SH250-CFast 2.0 delivers data transfer rates up to 560MB/s in sequential access and 66,000 IOPS in 4KB random access. In addition, Apacer CFast cards come with S.M.A.R.T. for lifetime monitoring. With Apacer's SLC-liteX technology, SH250-CFast 2.0 performs with higher number of P/E cycles up to 30,000 times. Moreover, SH250-CFast 2.0 guarantees reliability of applications in harsh environments by implementing intelligent Flash Management algorithms and LDPC (Low Density Parity Check) ECC engine to extend SSD endurance and increase data reliability.

*The actual available memory on the device is less than what is listed on the package. This is due to small discrepancies in file formats and algorithms used by various operating systems. In addition, a portion of memory space is reserved for system files and data sectors for better performance.
