Date	2012-07-18		
Status	Released		
Document Control ID	L16_EVB_UGD_V1.0		

#### **General Notes**

Quectel offers this information as a service to its customers, to support application and engineering efforts that use the products designed by Quectel. The information provided is based upon requirements specifically provided for customers of Quectel. Quectel has not undertaken any independent search for additional information, relevant to any information that may be in the customer's possession. Furthermore, system validation of this product designed by Quectel within a larger electronic system remains the responsibility of the customer or the customer's system integrator. All specifications supplied herein are subject to change.

# 1. Introduction

This document defines and specifies the usage of L16 EVB (Evaluation Board). Customer can get useful information about L16 EVB and GNSS demo tool from this document.

#### 1.1. Related documents

#### **Table 1: Related documents**

SN	Document name	Remark	
[1]	L16_HD	L16 Hardware Design	
[2]	L16_Reference_Design	L16 Reference Design	
[3]	L16_GNSS_Protocol	L16 GNSS Protocol Specification	

#### 1.2. Terms and abbreviations

#### Table 2: Terms and abbreviations

Abbreviation	Description
bps	bits per second
CNR	Carrier-to-Noise Ratio
GPS	Global Positioning System
GLONASS	Global Navigation Satellite System (The Russian GNSS)
GNSS	Global Navigation Satellite System
PPS	Pulse Per Second
PRN	Pseudorandom Noise
UART	Universal Asynchronous Receiver & Transmitter
USB	Universal Serial Bus
UTC	Universal Time Coordinated
WGS84	World Geodetic System 1984

# 2. EVB Kit introduction

#### 2.1. EVB top and bottom view

Figure 1: EVB top view

Figure 2: EVB bottom view

A: UART1 port (NMEA messages port) B: UART2 port (Debug messages port) C: Antenna interface D: L16 Module E: Test points F: USB interface (not used) G: Adapter interface H: POWER switch I: DOWNLOAD switch J: RESET button (not used) K: STANDBY button (not used) L: Indicated LEDs

#### 2.2. EVB accessories

Figure 3: EVB accessories

- A: Dedicated GPS/GLONASS active antenna (3.3V)
- B: DC5V/2A power adapter
- C: USB to RS232 converter cable
- D: CD (Device Driver for USB to RS232 converter cable)

# 3. Interface application

## **3.1.** Power interface

Figure 4: Power interface

#### **3.2. UART interface**

Figure 5: UART interface

#### Table 3: Pins of UART1&UART2 port (female)

Pin	Signal	I/O	Description
2	TXD	0	Transmit data
3	RXD	Ι	Receive data
5	GND		GND

Note: The above pins are RS232 voltage level.

#### **3.3.** Antenna interface

Figure 6: Antenna interface

#### 3.4. Switches and buttons

**Figure 7: Switches and buttons** 

#### Table 4: Switches and buttons

Part	Name	Description
S1	POWER	Switch on to supply power for L16 EVB
S2	DOWNLOAD	Switch on to enter upgrading mode
K1	RESET	Not used
K2	STDBY	Not used

#### **3.5. Operating status LEDs**

#### Figure 8: Operating status LEDs

#### Table 5: Operating status LEDs

Part	Name	Description
T 1	DWD	Bright: Power on
	F WK	Extinct: Power off
L2	1PPS	This LED will blink at 1Hz when L16 works normally.
L3	TXD1	This LED will blink when L16's UART1 port outputs messages

#### **3.6.** Test points

**Figure 9: Test points** 

#### Table 6: Pins of X201

Pin No.	Signal	I/O	Description
1	V_BCKP	Ι	Voltage supply for RTC logic
2	GND		Ground
3	V_ANT	Ι	Voltage supply for external active antenna
4	TXD2	0	Transmit data
5	RXD2	Ι	Receive data

6	VCC_OUT	0	Voltage output
7	VDDUSB	Ι	Not used
8	VCC_L6	Ι	Voltage supply for L16
9	SCL	I/O	Not used
10	SDA	I/O	Not used
11	AOK	0	Not used
12	RST	Ι	Not used
13	1PPS	0	1 pulse per second
14	STDBY	Ι	Not used
15	TXD1	0	Transmit data
16	RXD1	Ι	Receive data
17	AADET	Ι	Not used
18	VCC_RF	0	Optional output voltage for external active antenna
19	GND		Ground
20	GND		Ground

# 4. EVB and accessories

When USB to RS232 converter cable is used, the EVB and its accessories are equipped as shown in Figure 10.

Figure 10: EVB and accessory equipments with serial cable

# 5. Installing device driver

Before using UART port, please install the driver of USB 2.0 to RS232 converter in the attached CD. For detailed information, please refer to the User's Guide as below.

Figure 11: Driver installation window

## 6. Firmware upgrade

Quectel provides X-Loader (1.8) tool for customer to upgrade firmware.

#### 6.1 The minimum system requirements

The tool is written in C# using Microsoft Visual Studio 2010 Express and is built with .NET 2.0 Framework. Below are the minimum system requirements:

Windows XP Service Pack 2 or higher; .NET 2.0 Framework or higher<sup>123</sup>.

- 1. Microsoft .NET Framework Version 2.0 Redistributable Package (x86)
- 2. <u>Microsoft .NET Framework Version 2.0 Redistributable Package (x64)</u>
- 3. Microsoft .NET Framework Version 2.0 Redistributable Package (IA64)

#### 6.2 Usage

Below is the window of TeseoII firmware upgrade tool.

👉 TeseoII X-Load	er 1.8	
Target device O SRAM	Binary image settings Destination Address (hex) 100000	Size (bytes)
⊙ SQI flash	Entry Point (he 00000000	CRC32
O NOR flash	Load	Keep these options unchanged
Loading settings	◯ SD/MMC mode ◯ File mode	Options Erase NVM Erase only
Output port COM1	✓ Baud rate 115200 ✓	Dump Program only
	Send	Contacts 🦅
Idle		

Figure 12: Upgrade tool window

Step 1:

In order to upgrade firmware via UART, please connect the UART1 or UART2 port with computer through USB to RS232 converter cable and open the upgrade tool TeseoII X-Loader 1.8.

Step 2:

- Select "SQI flash" in Target device box and "UART mode" in Loading settings box.
- Click "Load" button to select the firmware file (.bin).
- Click Output port to choose the suitable port number.
- Click Baud rate to choose the suitable upgrade rate, here 921600 is not supported.
- Keep other options unchanged.

Step 3:

After configuring the above options, turn on DOWNLOAD switch (S2) and repower the system, click "Send" button to start upgrade process.

Step 4:

Once the upgrade process is finished, turn off S2 and repower the system.

Note: Switch on S2 to connect 1K resistor between TXD1 net and GND, and switch off S2 to disconnect their connection here.

# 7. GPS testing tool

The GPS Testing tool can help user to view the status of GNSS receiver conveniently. When the tool is opened, the following window will be displayed:

🚽 Testing	Configuration Panel
Device Tes	sting General Enable debug option and configure the port
	and baud rate to open the debug window
	Device Name Device1 Path D:\L16\L16 NMEA Port 6 NMEA Baudrate 9600 DEBUG Enabled DEBUG Port 1 DEBUG Baudrate 38400 V
	Partial Logging V WARM Command SPSTMWDLD SHART Stating GRSSLIB Stating Cold (#
	Results Logging 🔽 HOT Command \$PSTMHOT BAD POS \$PSTMTEST,1001,0,440 NCO Range
	<b>DEVICE 2</b> Keep these options unchanged
Π	DEVICE 3
F	DEVICE 4
	Cancel Save OK

Figure 13: Device configuration window

"Device" label:

Input device name and choose path to save the related information. Select suitable NMEA port and baud rate (9600) and keep other options unchanged as shown in the above figure.

Note:

This tool can show the working status of four devices at the same time.

After configuring testing tool, click "Save" to save these configurations and click "OK" to start tesing the information of the GNSS signals as below.

Figure 14: NMEA and debug window

From the NMEA window, customer can find CNR message, time, position, speed and precision information and so on. Explanations are listed in Table 7.

Icon	Explanation
UTC 09:14:26.000	UTC time
Lat         31 9.88483         N           Lon         121 23.55372         E           Alt         55.67 m           Speed         0m/s           Course         0.0 deg           Fix	Latitude and longitude degree Altitude based on WGS84 Datum Speed of receiver Satellite numbers
PDOP:         1.2           HDOP:         0.9           VDOP:         0.8	Position Dilution of Precision Horizontal Dilution of Precision Vertical Dilution of Precision
40 41	The CNR of PRN 21 is 40dB/Hz and the CNR of PRN 76 is 41dB/Hz. Blue for GPS and Green for GLONASS. The filling column means the navigation data of this satellite is in use.
39 21 30 31	The CNR of PRN 30 is 39dB/Hz. White empty column means the navigation data of this satellite is not in use.

Customer can open "Command Panel" from "option" menu, and send common commands (such as cold start, warm start and hot start commands) conveniently.

Besides, customer can take more tests automatically with the configuration as below.

Choose "Testing" label, select test types, input test number and delay time, 15~45s delay is recommended here, and keep other options unchanged shown as below.

<b>Testing Configuration Panel</b> Device         Testing         General		3
Test COLD COLD Number 25 Number 25 Min Delay [s] 15 C TITRK Max Delay [s] 45 Sats 6 Time 10 Almanacs Loading File	Add         Insett         Replace         Remove         Clear           COLD 0251545510-10         WARM 02515455.10-10,         H0T.0.2515456.10-10,         H0T.0.2515466.10-10,         H0T.0.25166.10-10,         H0T.0.2515466.10-10,	
Keep these options unchanged	Cancel Save OK	8

#### Figure 15: Testing configuration window

After configuring these options, click "OK", and then open "Testing" menu to select "New Test Session", the test process will display as below, and the related data will be saved in the path ("D:\L16").
