

The CEM35 electronic housing is realized for connections up to 24 poles.

It is possible to reduce the number of connections thanks to the closing accessory **TP35 / TG35**. Simply insert this accessory into the hole you need to close before inserting the board.

The CEM35-H housing, with horizontal boards, is designed to accept our ML25-V-L terminal blocks granting a wire section of 2,5sqmm.

The wide inner space allows the use and mounting of a high number of electronic components.

Special colours, modifications on upper cover and imprints are available on request.
