## 2.5 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

## 2.16 Hard Disk Drive (HDD) Installation

---

Step 1: Unfasten the four screws of the AEC-6646B

Step 2: Get the HDD and HDD Bracket ready. Fasten four shock washers to the HDD Bracket.

Step 3: Fasten the four screws to fix the HDD and HDD bracket

Step 4: Fasten the four screws to install the HDD and HDD Bracket to the chassis, then connect the SATA cable to the HDD.

Step 5: Close the cover of the AEC-6646B and fasten the screws and copper cylinders.

## 2.17 CPU Installation

Step 1: Unfasten the four screws of the AEC-6646B

Step 2: Gently press down the latch on the side of the CPU socket and then lift it.

Step 3: Open the CPU lid.

Step 4: Install the CPU. Orientate the CPU with socket and align the CPU notches with the socket alignment keys. Make sure the CPU is perfectly horizontal and then insert the CPU into the socket. After finishing the above procedures, close the CPU lid.

Step 5: Remove the protective Mylar slice from the CPU socket.

Step 6: Adhere the heat-spreading sheet (thermal pad) to the CPU surface.

## 2.18 Memory Card Installation

---

Step 1: Unfasten the four screws of the AEC-6646B

Step 2: Gently push down on the tabs on either side of the DIMM slot in tandem.

Step 3: Line up the pins and firmly (but not roughly) press on the outside of Memory Card to install.

Step 4: Snap the DIMM slot tabs shut, locking the Memory Card in place.

## 2.19 Wallmount Kit Installation

Get the brackets ready and fasten appropriate four screws on each bracket. After fastening the two brackets on the bottom lid of AEC-6646B, the wallmount kit installation has been finished.

## AMI BIOS Setup

### 3.1 System Test and Initialization

---

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

#### System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration is reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

The AEC-6646B CMOS memory has an integral lithium battery backup for data retention. You have to replace the battery when it finally runs down.

## 3.2 AMI BIOS Setup

---

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

### Entering Setup

Power on the computer and press <Del> or <F2> immediately. This will allow you to enter Setup.

## AHCI Settings

## C.1 Setting AHCI

OS installation to SETUP AHCI Mode

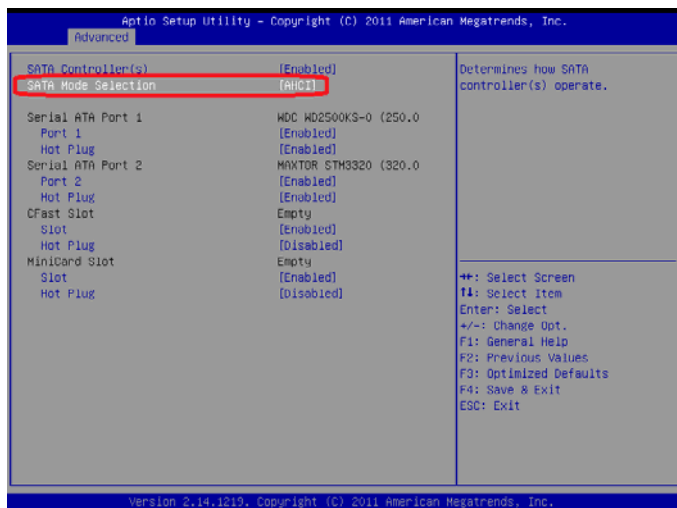

Step 1: Copy below files from “Driver CD -> Step7-RAID&AHCI\WinXP\_32” to diskette.

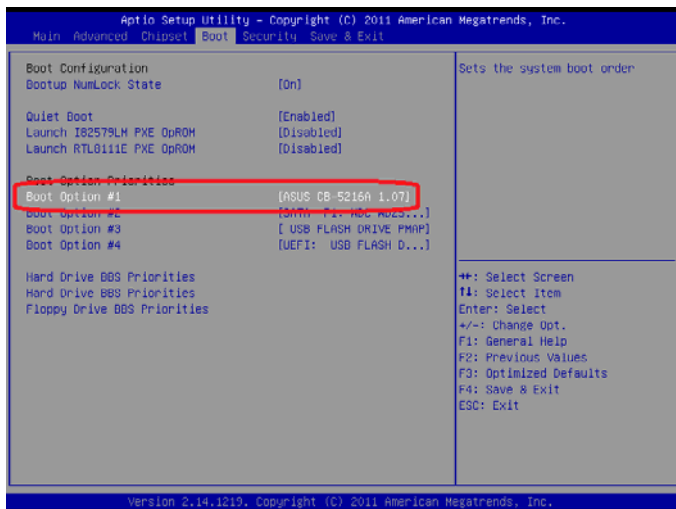

Step 2: Connect the USB Floppy drive to the board and insert the diskette from previous step.

Step 3: Configure SATA Controller to AHCI mode in **BIOS SETUP Menu**:

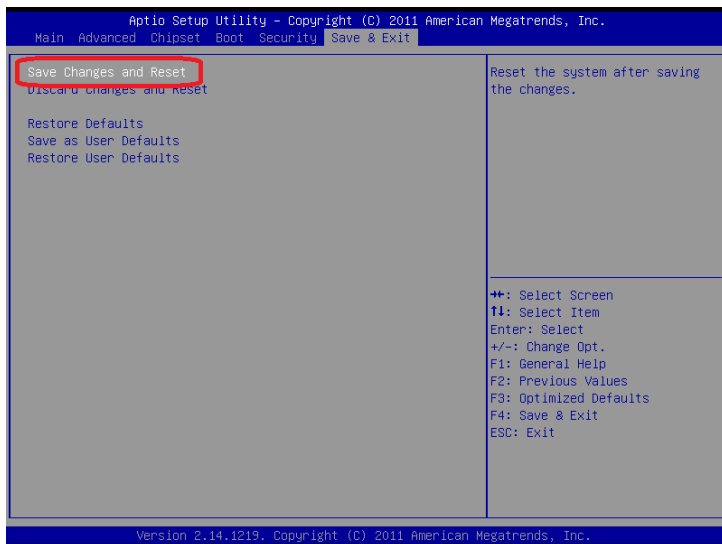

**Advanced -> SATA Configuration -> SATA Mode -> AHCI Mode**

Step 4: Configure DVD/CD-ROM drive as the first boot device.

Step 5: Save changes and exit BIOS SETUP

Step 6 – Boot to DVD/CD-ROM device to install OS

Step 7 – Press “F6” to install AHCI driver

Step 8 – Press “S” to install AHCI driver

Step 9 – Choose “Intel(R) 7 Series Chipset Family SATA AHCI Controller”

Step 10 – It will show the model you selected and then press “ENTER”. Windows Setup will continue to install OS.
