

Hliníkové Chladiče Aluminium Heatsinks

GAMA aluminium

ISO-9001, 14001, 18001 Certified

EXPORT:

Vážený obchodní partneri,

Myslím si, že väčšine z Vás už nemusíme predstavovať a takisto presvedčať Vás, že **GAMAalumínium** je na trhu s hliníkovými chladičmi dlhodobo stabilná a silná spoločnosť s neustále rozširujúcim sortimentom chladičov a hliníkových profilov. Pre Vás, ktorí ste nás objavili len dnes, je venovaných párr riadkov.

Sme výroбno – obchodná spoločnosť zameraná na opracovanie a predaj hliníkových chladičov a profilov, ktoré nájdú uplatnenie prevažne v elektrotechnickom odvetví.

Spolupráca s nami sa oplatí!

Marián Gahír
konateľ / CEO

Naša firma sa neustále rozvíja a rastie či už v oblasti technického rozvoja v oblasti

personálnej, ako aj v oblasti zlepšovania kvality poskytovaných služieb čo dokazuje aj získanie a udržiavanie systému kvality. Sme držiteľmi certifikátov ISO 9001:2008, ISO 14001:2004, ISO 18001:2007. Najnovšie sme získali Certifikát o spracovaní odpadu z obalov. Nakoľko pracujeme z nebezpečnými látkami ochrana životného prostredia patrí medzi naše priority.

Prevádzka firmy sa nachádza vo vlastných priestoroch, ktoré neustále prispôsobujeme potrebám výroby. Firma je vybavená modernými CNC strojmi značky DOOSAN A HURCO, a tento rok plánujeme zriadiť nové priestory pre ďalšie takéto nové CNC stroje. V roku 2011 sme taktiež postavili nový sklad hotových výrobkov. Na delenie materiálu používame tri kotúčové píly z toho jednu automatickú jednokotúčovú pílu a jednu dvojkotúčovú automatickú pílu.

V poslednom čase rastie dopyt po veľkých chladičoch, ktoré sa nedajú vyrobiť klasickou technológiou a preto jediným z riešení je takýto chladič zvariať z viacerých kusov. Aj v tejto oblasti vieme pre zákazníka takýto chladič vyrobiť. Pre tento účel máme robotizované pracovisko, ktoré je osadené zváracím robotom OTC DAIHEN. Aby sme mohli pre zákazníkov dodávať chladiče podľa jeho požiadaviek, nielen opracované na CNC strojoch, ale aj s povrchovou úpravou, máme vlastnú linku na anodickú oxidáciu – eloxovanie. Štandardne robíme prírodný a čierny elox. V prípade požiadavky zákazníka vieme urobiť aj elox modrý, zlatý a červený. To upevňuje postavenie firmy na trhu s hliníkovými chladičmi a ich opracovaním. Naša flexibilita v oblasti obchodu a výroby z nás robí výborného partnera pre realizáciu Vašich základok.

Minulosť, prítomnosť, budúcnosť ...

História výroby a predaja hliníkových chladičov, ktoré firma GAMAalumínium dnes ponúka sa začala písť už v roku 1997. Počas tohto obdobia sa firma vyprofilovala a má dominantné postavenie už nie len na Slovensku. V spolupráci s našimi obchodnými zástupcami sa náš sortiment predáva v Českej republike,

v Poľsku, v Maďarsku, v Nemecku a v Rumunsku. Okrem toho máme zákazníkov v Anglicku, vo Švédsku, vo Francúzku, v Belgicku, v Rakúsku a v Taliansku.

Neustále zabezpečujeme kontinuálny rast výroby a predaja podľa špecifických požiadaviek zákazníka, čo potvrzuje aj neustále pribúdanie nových zákazníkov. Získavaniu nových zákazníkov prispieva aj účasť na domácich a zahraničných výstavách.

V roku 2011 to boli výstavy AMPÉR, ELOSYS, ELEKTRO MOSKVA a MIDEST Paríž. Naše chladiče sa presadzujú na európskom trhu a je perspektíva na ich aplikáciu aj do budúcnosti. Dokladuje to aj množstvo ktoré každoročne rastie. V roku 2010 sme predali cca 100 ton chladiacich profilov a v roku 2011 to už bolo viac ako 200 ton. Aj v tomto roku je naším hlavným cieľom kvalita, rozšírenie sortimentu podľa požiadaviek zákazníkov a rozširovanie výrobných priestorov a modernizácia technologických zariadení.

Hlavný výrobný program firmy tvoria:

- Hliníkové chladiče pre elektrotechnický priemysel
- Hliníkové profily pre LED svetlá
- Zákaznícke profily
- Výroba a predaj hliníkových profilov
- Delenie hliníka na automatických pílach
- Opracovanie hliníka na CNC strojoch
- Zváranie hliníka v ochrannej atmosfére
- Eloxovanie – povrchová úprava Al profilov anodickou oxidáciou

Hliník ...

Je univerzálny, ľahký a zároveň pevný materiál, ktorý môže byť vyrobéný, spracovaný a lisovaný do nespočetného množstva tvarov.

Vynikajúce mechanické a chemické vlastnosti hliníka, spojené s jeho ľahkou tvárniteľnosťou, umožňujú vytvoriť produkt ktorý nachádza široké použitie vo všetkých priemyselných odvetviach.

Nami ponúkané lisované profily sú vyrábané z hliníka a z hliníkových zliatin AlMgSi 0.5, AlMgSi 0.7 resp. AlMgSi 1 technológiou pretláčaného lisovania za tepla. Profily sú lisované v toleranciách podľa rozmerovej normy EN 755.

Povrchová úprava hliníka ...

Je dôležitou súčasťou finálnych výrobkov. Zabráni prirodzenému oxidovaniu hliníka vplyvom atmosférického kyslíka na hliník, ktorá je závislá od vplyvu prostredia, v ktorom sa výrobok nachádza. Podľa toho sa vplyvom prostredia a času mení aj vrstva oxidu a vzhľad hliníkového materiálu. Tým sa mení aj tepelná vodivosť hliníkových materiálov a farebná stálosť. Okrem funkčnej stránky splňa aj estetické požiadavky po aplikácii vhodnej povrchovej úpravy. Realizujeme povrchovú úpravu v odtieňoch prírodná, čierna, zlatá, modrá, červená ...

Hliníkové chladiče ...

Využitie hliníkových chladičov v praxi nachádza široké uplatnenie všade tam, kde je kladená potreba odvádzať nadbytočné teplo z elektronických súčiastok. Z toho vyplýva nezastupiteľná potreba hliníkových chladičov pre dosiahnutie požadovanej funkčnosti a spoľahlivosti elektrotechnických výrobkov a zariadení. V súčasnosti vám ponúkame viac ako 130 chladičových profilov a tento sortiment neustále rozširujeme. Nové chladiče aktuálne zverejňujeme na našej webovej stránke www.gamaaluminium.sk V poslednom období sme sortiment rozšírili o chladiče vhodné pre LED svetlá. Spolupracujeme zo zákazníkmi pri návrhu vlastných chladičov, tzv. zákazníckych. Tento sortiment z pochopiteľných dôvodov v tomto katalógu neuvádzame. Takýchto profilov máme viac ako 50 druhov. A nie sú to len chladiče .

Naše motto:

"Kvalita je, keď sa vracia zákazník a nie tovar."

Všeobecný popis

General description

Hliníkové chladiče

sa vyrábjajú z lisovaných profílov, ktoré nakupujeme od rôznych domácich a zahraničných výrobcov. Profíly nakupujeme a skladujeme v dĺžkach 2000 – 4000 mm.

Niekteré typy chladičov v aktuálnej ponuke sa môžu mierne líšiť od profilu uvedeného v katalógu, jedná sa hlavne o tvar rebier, môžu byť rovné alebo mierne zvlnené, hrúbka rebier a pod. Túto skutočnosť zo zákazníkom konzultujeme pred dodávkou.

Špecifická hmotnosť hliníka je 2,7 kg/dm³

Dodávané profily sú v súlade so smernicou RoHS Directive

Normy

Hliníkové profily sú lisované podľa norem EN 755-5 až 9. Tieto normy hovoria o prípustných odchýlkach skutočných profílov od menovitých hodnôt.

Materiál použitý na chladiče je AW6060 (Al Mg 0,7 Si) (ZH profily), príp. AW6063 (Al Mg Si) (ostatné profily), ktorých chemické zloženie zodpovedá hodnotám stanoveným v norme EN 573-3.

Povrch profilov je podľa normy EN 755-1.

Pri opracovaní, pokiaľ nie sú vo výkresovej dokumentácii uvedené tolerancie a iné požiadavky, sa riadime všeobecnými toleranciami STN ISO 2768-1 triedy m, ktoré sa týkajú dĺžok , uhlov , rovinnosti ,zrazení hrán , povrchu a pod.

Ponúkame ...

Profíly dodávame napíllené na požadované dĺžky, môžeme ich opracovať na CNC strojoch podľa dodanej dokumentácie, chladiče v prípade potreby zvárame na robotizovanom pracovisku a ponúkame aj povrchovú úpravu eloxovaním (elox prírodný, čierny, žltý, červený, modrý) alebo titanovaním .

Na požiadanie vieme zabezpečiť v spolupráci so SAV Bratislava meranie tepelného odporu pre konkrétny chladič.

V prípade že si z našej ponuky nevyberiete žiadny chladič, vieme zabezpečiť výrobu nového profilu podľa vašej požiadavky, prípadne zabezpečiť Vám profil od iných dodávateľov.

Aluminium Heatsinks

are manufacturing from pressed profiles, which we buy from various domestic and foreign producers. The profiles we buy and store in lenghts 2000 – 4000 mm.

Some types of heatsinks in the current offer may be slightly different from the profile specified in the catalog, mostly on the shape of the ribs - may be straight or slightly wavy, the thickness of the ribs and etc. This fact we consult with the customer before delivery.

A specific weight of aluminium is 2,7 kg/dm³

Supplied profiles are in accordance with the RoHS Directive

Standards

AL profiles are pressed according to a standard EN755-5 to 9. These standards speak about a tolerance of the actual profiles from the nominal values.

A material used for heatsinks is AW6060 (Al Mg 0,7 Si) (ZH profiles) or AW6060 (Al Mg Si) (other profiles) whose chemical composition corresponds to the values set down in standard EN 573-3.

A surface of the profiles is according to a standard EN 755-1.

Regarding to a machining, if the tolerance and other requirements are not mentioned in drawing documentation we follow the general tolerances STN ISO 2768 – 1 class m, concerning to a lengths, angles, flatness, deducting the edge, surface and etc.

We offered ...

We deliver a profiles cutted with required lenghts, they can be machined by CNC machines according to a received documentation, in case of need we weld a heatsink at welding robotic workstation and we offer the surface treatment as well (natural, black, yellow, red, blue) or titan.

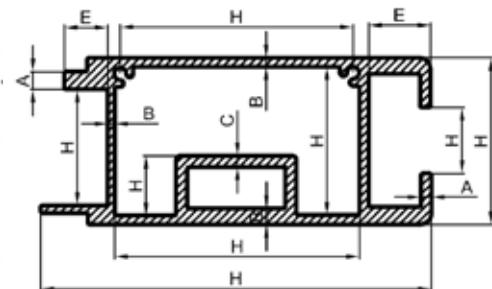

On request we provide in cooperation with SAS Bratislava measurement of thermal resistance for a particular heatsinks.

In case you do not choose any heatsink from our offer, we are able to provide a produce of new profile according to your requirements or provide a profile from another suppliers.

Meranie tepelného odporu chladičov (R_{th})

Tepelný odpor chladičov elektronických súčiastok je dôležitý údaj pre konštruktérov elektronických zariadení, ktorý umožňuje optimálne navrhnuť odvod stratového tepla súčiastky pri dodržaní jej maximálnej dovolenej pracovnej teploty a to pri minimalizácii rozmerov chladiča. Pri jednoduchších geometrických tvaroch je možné stanoviť tepelný odpor chladiča s dostatočnou presnosťou aj výpočtom, no pre komplexnejšie tvary so zložitým obtekaním vzduchu okolo chladiča je často potrebné uskutočniť meranie tepelného odporu.

Definícia tepelného odporu

Tepelný odpor chladiča R_{th} je definovaný ako podiel rozdielu maximálnej teploty chladiča T_{ch} a teploty okolitého vzduchu T_v k tepelnému výkonu P rozptyľovaného chladičom do okolia v rovnovážnom stave:

$$R_{th} = \frac{T_{ch} - T_v}{P}$$

Rovnovážny stav je stav, kedy dodávaný výkon do chladiča je rovný tepelnému výkonu rozptyľovaného chladičom do okolia. Z toho tiež vyplýva, že pri konštantnej teplote okolitého vzduchu sa teplota chladiča v rovnovážnom stave nemení. Ak tepelný výkon dodávaný chladiču je generovaný ako Joule-Lenzovo teplo vznikajúce ako tepelná strata na odpore R výhrevného telesa, ktorým preteká jednosmerný prúd I a vzniká na ňom úbytok napäcia U , potom tepelný výkon dodávaný chladiču je rovný elektrickému výkonu dodávaného do výhrevného telesa:

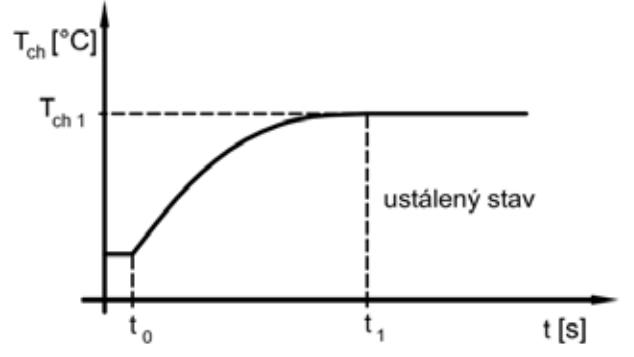

$$P = U \cdot I$$

Metóda merania

Do chladiča je pomocou elektrického výhrevného telesa počínajúc časom t_0 dodávaný zvolený elektrický výkon, ktorý je so 100% účinnosťou transformovaný ako Joule-Lenzovo teplo na tepelný výkon. Teplota chladiča postupne narastá až dosiahne platô, ktoré signalizuje dosiahnutie rovnovážneho stavu.

Za tohto stavu je dodávaný elektrický výkon do výhrevného telesa rovný tepelnému výkonu, ktorý je rozptyľovaný chladičom do okolia. Za ustáleného stavu sú odmerané všetky veličiny potrebné pre výpočet tepelného odporu a následne je tepelný odpor chladiča vypočítaný podľa vzorca:

$$R_{th} = \frac{T_{ch} - T_v}{U \cdot I}$$

Pre jednoduchosť sa často v katalógoch s chladičmi udáva len jedna hodnota tepelného odporu R_{th} , zmeraná pri takom stratovom výkone, pri ktorom teplota chladiča za danej teploty okolitého vzduchu 20 °C dosiahne zvolenú hodnotu. Ak je chladič určený na chladenie bežných elektronických súčiastok, zvolenou hodnotou teploty býva najčastejšie teplota 75 °C .

Podmienky merania

- teplota chladiča 75 °C
- teplota okolitého vzduchu v rozsahu 20 až 22 °C
- tlak vzduchu v rozsahu 980 až 1020 hPa
- relatívna vlhkosť vzduchu 20 až 80%
- normálne zloženie vzduchu (D 78%, O 21%, Ar 0,9%, CO₂ 0,03%)
- meranie R_{th} bolo uskutočnené bez umelej akcelerácie prúdenia vzduchu v okolí chladiča
- teplota vzduchu bola meraná vo vzdialosti 50 mm pod spodným okrajom chladiča
- pri meraní tepelného odporu boli chladiče umiestnené tak aby bolo zabezpečené maximálne samovoľné prúdenie zohriateho vzduchu

Namerané výsledky tepelného odporu sú platné za spomenutých podmienok merania !!!

Tepelné odopy uvádzané v katalógu sú len informatívne.

*Merania tepelného odporu boli uskutočnené na zariadení vyvinutom v
Ústave merania SAV Bratislava.*

Measurement of heatsinks thermal resistance (R_{th})

Thermal resistance of electronic parts heatsinks represents important information for electronic equipment constructors that allows for optimum design of the part thermal loss outlet upon maintaining the maximum working temperature limit of the part and minimized heatsink dimensions. In case of simpler geometric dimensions, it is possible to determine the heatsink thermal resistance with accurate calculation but it is often required to measure thermal resistance in case of more complex shapes with complicated air flow around the heatsink.

Definition of thermal resistance

Thermal resistance of heatsink R_{th} is defined as a proportion of difference of maximum heatsink temperature T_{ch} and ambient temperature T_v to thermal output P dispersed by the heatsink to surrounding area in the state of equilibrium:

$$R_{th} = \frac{T_{ch} - T_v}{P}$$

The state of equilibrium is a condition when power input in the heatsink equals to thermal output dispersed by the heatsink in surrounding area. Accordingly, heatsink temperature in the equilibrium status doesn't change at constant ambient temperature.

If thermal output supplied to the heatsink is generated as the Joule-Lenz heat generated as a thermal loss of heating body resistance R that DC current passes through/ voltage drop U occurs thereon, then thermal output supplied to the heatsink equals to electric output supplied to the heating body:

$$P = U \cdot I$$

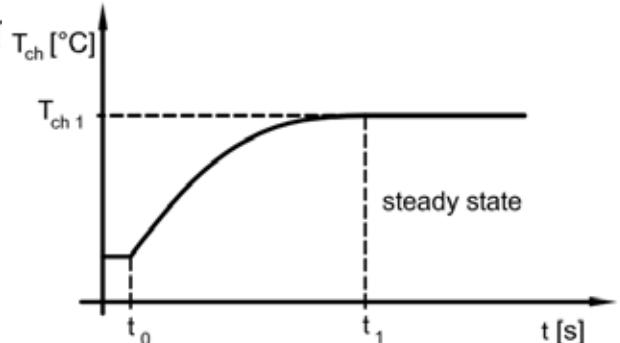

Measurement method

Selected electric output is supplied to the heatsink beginning at the time t_0 , that is transformed as a Joule-Lenz heat to thermal output with 100% efficiency. The heatsink temperature gradually increases up to the level that signalizes reached equilibrium status..

In this condition, electric output supplied to heating body equals thermal output dispersed by the heatsink to the surrounding area. All parameters required to calculation of thermal resistance are measured at the status of equilibrium and subsequently, the heatsink thermal resistance is calculated according to the following formula:

$$R_{th} = \frac{T_{ch} - T_v}{U \cdot I}$$

For simplification purposes, the catalogue with heatsink often specify only one value of thermal resistance R_{th} , measured at such output loss when the heatsink temperature at ambient temperature 20 °C reaches the selected value. If a heatsink is intended to cool down common electronic parts, chosen temperature usually refers to 75 °C.

Graphical illustration of heatsink temperature increase in real time.

Measurement terms

- Heatsink temperature 75 °C
- Ambient temperature variance within 20 - 22 °C
- Air pressure within 980 - 1020 hPa
- Relative air humidity within 20 - 80 %
- Standard air composition (D 78%, O 21%, Ar 0,9%, CO₂ 0,03%)
- Measurement of R_{th} was conducted without artificial air flow acceleration around the heatsink
- Air temperature was measured at distance 50 mm under the bottom heatsink edge
- During thermal resistance measurement, the heatsinks were located so as maximum self-flowing of heated air was ensured.

Measured values of thermal resistance are valid upon the above-mentioned measurement conditions.

Thermal resistance values stated in the catalogue are only of information nature.

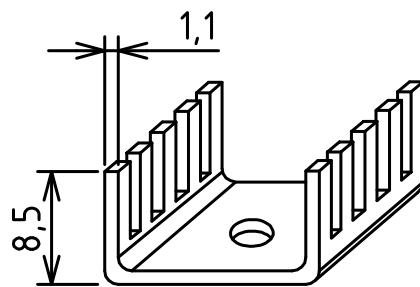

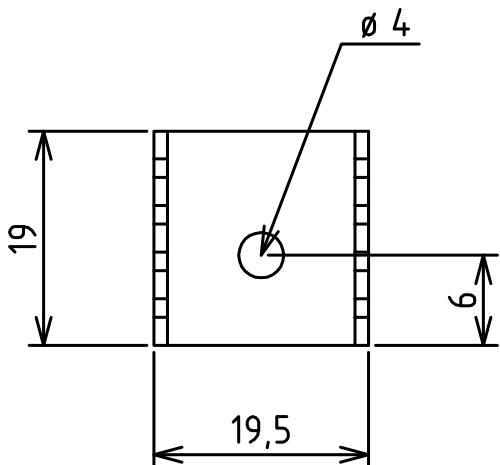

Currently, new measurements are conducted and the measurement values will be gradually completed.

Thermal resistance measurements were conducted with the equipment developed by the Measurement Institution, the Slovak Academy of Sciences in Bratislava

Dear business partners,

We do not need to introduce ourselves to many of you or try to persuade you that GAMAaluminium is in the long term a steady and strong company on the market with aluminium coolers, with a constantly increasing range of coolers and aluminium profiles. The following lines are dedicated to those of you who have just discovered us today.

We are a production-business company specialising in the treatment and selling of aluminium coolers and aluminium profiles, which will find their application primarily in the field of electrical engineering (electrotechnics).

Cooperation with us pays off!

**Marián Gahír
CEO of GAMAaluminium**

Our firm is continuously developing and growing, either in the field of technical development, staff management, or in the area of enhancing quality of provided services. This is proven by both obtaining and maintaining the quality system in the form of certificates ISO 9001:2008, ISO 14001:2004, ISO 18001:2007. Regarding the fact that we work with hazardous substances, environmental protection belongs to our priorities, which is also evident by prior obtaining the Certificate of evaluation and recycling of packaging waste.

The company is situated on its own premises, which we adapt to production needs. At the beginning of the year we built a new storage house for finished products and established new facilities for more CNC machines. The company is well-equipped by modern CNC machines of the DOOSAN and HURCO brand. Recently we have extended a production park with two new CNC machines, also of the DOOSAN and HURCO brand. For dividing materials we use three circular saws, two of which are automatic.

Lately there is a growing demand for large coolers, which cannot be manufactured by means of classical technologies, and therefore one possible solution is to weld up such cooler from several pieces. Even in this respect we are accommodating to our customers. For this purpose we have a robotic workstation with the installed OTC DAIHEN welding robot. We meet all customer's demands, not only in the area of treatment by means of the CNC machines, but also as regards the surface treatment. We have our own anodic oxidation (eloxing) line. Standardly we produce natural and black elox. In case of customer's needs, we are able to provide the elox of blue, gold and red colour. The fact that we can deliver a finished cooler to the customer strengthens the company's position on the market with aluminium coolers and their treatment. Our flexibility in the business and production area makes us an excellent partner for the delivery of your orders.

Past, present, future ...

The history of production and selling of aluminium coolers that are currently offered by the company

GAMAaluminium started to be written in 1997. Since then the company has profiled itself and it has acquired a steady position not only in Slovakia. In cooperation with our business partners, our products are dispatched mainly to the Czech Republic, Poland, Hungary, Germany and Romania. We also have prominent customers in England, Sweden, France, Belgium, Austria and Italy. We permanently ensure a continuous growth in production and selling in compliance with customer's specific demands.

We participate in domestic and foreign fairs, which contributes to the winning of new customers. In 2011 the fairs were AMPER, ELOSYS, ELEKTRO Moscow and MIDEST Paris. Our coolers make achievements on the European market and there is a perspective for their future application. This is also manifested by the total number, increasing each year. In 2010 we sold approximately 100 tonnes of cooling profiles and in 2011 it was over 200 tonnes. This year our primary objectives still are quality, extending the range of coolers according to customers' demands, extending of production facilities and modernisation of technological equipment.

Company's main production programme consists of:

- Aluminium coolers for electrical engineering industry (electrotechnics)
- Aluminium profiles for LED lights
- Customer profiles
- Production and selling of aluminium profiles
- Aluminium dividing on automatic saws
- Aluminium treatment on the CNC machines
- Aluminium welding in the protective atmosphere
- Eloxying – surface treatment of aluminium profiles through anodic oxidation

Aluminium ...

Is the universal, light and at the same time solid material, which can be manufactured, processed and compressed into a limitless number of shapes. Unique mechanical and chemical properties of aluminium, together with its easy mouldability, enable to make the product which may be widely applied in all branches of industry. The compressed profiles that we provide are made of aluminium and aluminium alloys AlMgSi 0.5, AlMgSi 0.7, respectively AlMgSi 1 by means of the heat compression technology. The profiles are compressed within tolerances according to the dimension specification EN 755.

Surface treatment of aluminium ...

Is an essential part of finished products. It will prevent natural oxidation of aluminium through the influence of atmospheric oxygen on aluminium which depends on the influence of the environment in which the product is situated. The influence of the time and environment also affects the oxide layer and physiognomy of the aluminium material. This in turn affects heat conductivity of the aluminium materials and colour stability. Apart from functionality it also meets aesthetic demands after application of the proper surface treatment. We perform the surface treatment in the shades: natural, black, gold, blue, red ...

Aluminium coolers ...

Aluminium coolers can be widely put into practice everywhere it is necessary to take away excess heat from electronic components. From this follows an irreplaceable need for aluminium coolers to achieve required functionality and reliability of electro-technic products and equipment. At present we provide you with more than 130 cooler profiles and we continually extend the range of products. New coolers are advertised on a regular basis on our website www.gamaaluminium.sk. In recent period we have extended the range of our products with coolers suitable for LED lights. We cooperate with customers when designing own coolers, so-called customer coolers. For understandable reasons we do not provide these products in this catalogue. We have more than 50 kinds of these profiles.

Our motto:

"Quality means that it is the customer who returns, not the goods."
