10. Keep this device away from humidity.
11. Place the device on a solid surface during installation to prevent falls.
12. Do not cover the openings on the device to ensure optimal heat dissipation.
13. Watch out for high temperatures when the system is running.
14. Do not touch the heat sink or heat spreader when the system is running
15. Never pour any liquid into the openings. This could cause fire or electric shock.
16. As most electronic components are sensitive to static electrical charge, be sure to ground yourself to prevent static charge when installing the internal components. Use a grounding wrist strap and contain all electronic components in any static-shielded containers.

17. If any of the following situations arises, please contact our service personnel:
 - i. Damaged power cord or plug

2.5 CPU Installation

Step 1: Power down the system, unplug the power cord and ensure the system is off.

Step 2: Have 8th Generation Intel Core, Xeon, Celeron or Pentium CPU ready. See Chapter 1 for processor compatibility.

Step 3: Remove the top cover by unscrewing the four retention screws. You will see the CPU socket as in Figure 1.

Step 4: Install the CPU. Ensure you have also placed the thermal pad(s) as shown in figure 2.

Step 5: Replace the top cover and secure with the four screws removed in Step 3.

2.6 Expansion Card Installation

Step 1: Power down the system, unplug the power cord and ensure the system is off.

Step 2: Have the PCI Express card you wish to install ready, with the rear bracket attached.

Step 3: Remove the bottom panel from the system. Note: there are ten (10) retaining screws. Set the screws in a safe place while working on the system. Remove the two side cover screws (see figure 2)

Step 4: Insert the PCI Express card into the PCI Express slot, pressing in until secure. Secure the rear bracket with two screws (see figure 1).

Step 5: Attach the two side cover screws (see figure 2).

Step 6: Secure the card in place with the sliding bracket as follows:

A: Turn the securing screws counter-clockwise to Open.

B: Push the middle of the securing bracket down towards the expansion card. Note: the bracket should fit securely but not apply pressure onto the card.

C: Lock the securing screws by turning them clockwise.

Step 7: Reattach the bottom panel with the ten screws removed in Step 3, as shown in figure 3.

Step 8: Attach mounting brackets as shown in figure 4.

Chapter 3

AMI BIOS Setup

3.1 System Test and Initialization

The system uses certain routines to perform testing and initialization during the boot up sequence. If an error, fatal or non-fatal, is encountered, the system will output a few short beeps or an error message. The board can usually continue the boot up sequence with non-fatal errors.

The system configuration verification routines check the current system configuration against the values stored in the CMOS memory. If they do not match, an error message will be output, and the BIOS setup program will need to be run to set the configuration information in memory.

There are three situations in which the CMOS settings will need to be set or changed:

- Starting the system for the first time
- The system hardware has been changed
- The CMOS memory has lost power and the configuration information is erased

The system's CMOS memory uses a backup battery for data retention. The battery must be replaced when it runs down.

3.2 AMI BIOS Setup

The AMI BIOS ROM has a pre-installed Setup program that allows users to modify basic system configurations, which is stored in the battery-backed CMOS RAM and BIOS NVRAM so that the information is retained when the power is turned off.

To enter BIOS Setup, press or <F2> immediately while your computer is powering up.

The function for each interface can be found below.

Main – Date and time can be set here. Press <Tab> to switch between date elements

Advanced – Access advanced hardware settings and options

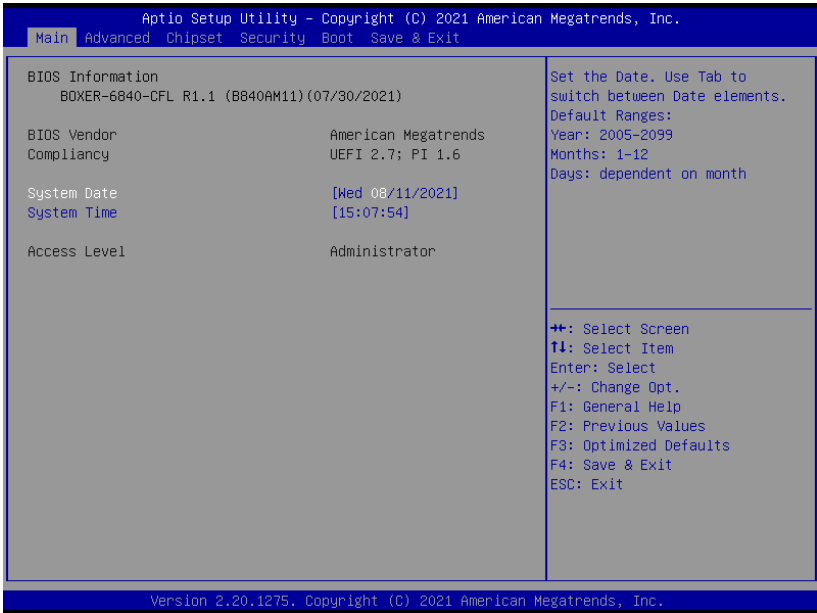

Chipset – Chipset settings and options

Security – Set admin and user passwords, access Secure Boot options

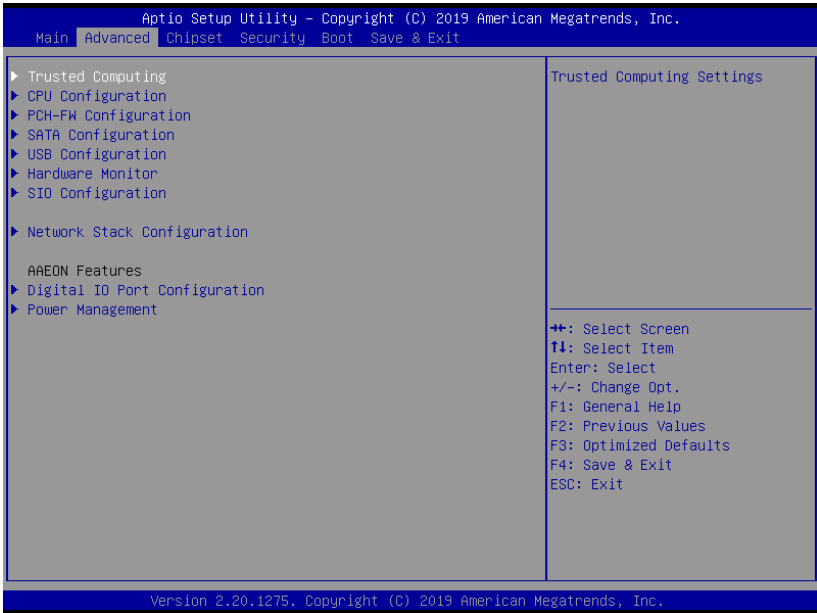

Boot – Boot options including BBS priority and Quiet Boot options

Save & Exit – Save changes and exit the program

Digital I/O Ports

C.1 DIO Introduction

This section details the specifications and information needed to setup and program the Digital I/O ports for your system (DIO).

Please refer to the Linux Driver User Guide to access DIO, Watchdog Timer and Hardware Manager. The User Guide is available to download from the Drivers section of the product page.

C.2 Electrical Specifications for Digital I/O Ports

GPIO76	DIO_6
GPIO77	DIO_7

C.3 DIO Programming

BOXER-6840-CFL utilizes FINTEK F81966 chipset as its Digital I/O controller. The following sections detail the procedures to complete its configuration.

There are three steps to complete the configuration setup:

Step 1 Enter MB PnP Mode.

Step 2 Modify the data in the configuration registers.

Step 3 Exit MB PnP Mode. Undesired results may occur if MB PnP Mode is not exited properly.

Glue Removal Procedure

D.1 Removing Glue from Your System

To protect components from damage and ensure proper operation out of the box, glue may have been applied to some cables or connectors to keep them in place during shipping. This glue must be removed before attempting to swap components or perform maintenance. This section details the steps needed to remove the glue.

Before performing any kind of system maintenance, ensure the system is shut down (not in sleep or hibernate mode) and the power cable has been removed. Follow steps in Chapter 2 to access the components inside.

You will need the following items for this step:

- Cotton or cottonswab
- Anti-static tweezers
- An alcohol solution that is at least 99.5% alcohol (ethanol solution or denatured alcohol). AAEON recommends using an eye dropper or a bottle with a nozzle as in the picture below:

Step 1: Using an eyedropper or bottle as shown above, apply a few drops of alcohol to the glue.

Step 2: Allow the alcohol to soak for 10 seconds, then use a cottonswab or cotton with anti-static tweezers to evenly rub the alcohol over the glue.

Step 3: Let soak for 10 more seconds, then use anti-static tweezers to remove the glue.
