Transceiver Module

Data Sheet

Smarter wireless. Simply.

Description

TR-52D is a family of IQRF transceiver modules operating in the 868 MHz and 916 MHz license free ISM (Industry, Scientific and Medical) frequency band. Its highly integrated ready-to-use design requires no external components. Microcontroller with built-in operating system, excellent development support, integrated LDO regulator, serial EEPROM and optional temperature sensor dramatically reduce time of application development. Ultra low power consumption predetermines these modules for use in battery powered applications.

This document is valid for TR as well as DCTR transceiver versions. For simplicity, only TR is used further on throughout the document.

Electrical specifications

Typical values unless otherwise stated

Parameters specified in this datasheet are typical values. They are at power supply $V_{OUT} = 3\text{ V}$ only. V_{OUT} voltage different from 3 V can impact on RF range and other parameters.

LDO output (V_{OUT})	+3 V \pm 60 mV ($V_{CC} > 3.1\text{ V}$), 100 mA max.
Operating temperature ¹	-40 °C to +85 °C
Supply current	
Sleep mode	1.9 μ A (if all peripherals including MRF49XA disabled ³)
Run mode	1 mA (MRF49XA disabled), 1.6 mA (MRF49XA enabled)
Additional LED supply current	cca 2 mA (if one or two LEDs on). Rough value for brief guidance only.
RX mode	STD mode: 13 mA LP mode ⁴ : OS v3.01D: 400 μ A, from OS v3.02D: 330 μ A XLP mode ⁴ : OS v3.01D: 35 μ A, from OS v3.02D: 25 μ A
TX mode	14 mA – 24 mA (according to RF output power)
RF Band	868 MHz or 916 MHz (software selectable)
Channels	See IQRF OS User's guide, Appendix 2, Channel maps
RF data modulation	FSK (frequency-shift keying)
RF data transmission bit rate	1.2 kb/s ⁵ , 19.2 kb/s, 57.6 kb/s ⁵ , 86.2 kb/s ⁵
RFIC RF sensitivity	See MRF49XA datasheet

Note 1: RF range may change with lower temperature. Frost, condensation or humidity over 85% may disable module functionality. Module suitability should be tested in final application before volume use.

Note 2: RF range strongly depends on module orientation and surroundings.

Note 3: Additional current is consumed when a peripheral (e.g. watchdog, Brown-out detection etc.) is enabled.

Note 4: Depends on interferences.

Note 5: RF bit rates different from 19.2 kb/s are preliminary, for experimental purpose only.

Users have to ensure observing local provisions and restrictions relating to the use of short range devices by software, e.g. the CEPT ERC/REC 70-03 Recommendation and subsequent amendments in EU.

TR modules with metallic shielding of RF circuitry (with the "F" postfix, e.g. TR-52DF) must be used in countries where FCC provision is valid.

Caution: Electrostatic sensitive device. Observe appropriate precautions for handling

Absolute maximum ratings

Stresses above listed maximum values may cause permanent damage to the device and affect device reliability. Functional operation at these or any other conditions beyond those specified is not supported.

Supply voltage (V_{CC})	5.5 V
Voltage on C1, C2, C5 to C8 pins vs. GND	-0.3 V to ($V_{OUT} + 0.3$ V)
Storage temperature	-40 °C to +85 °C
Ambient temperature under bias	-40 °C to +85 °C
