Výroba nadrozumného chladiča
Oversize heatsink production

Vážení zákazníci a obchodní partneri

Tak ako každý rok sa Vám v čase výstavy AMPER prihováram novým vydaním katalógu produktov GAMAalumínium. Naša ponuka chladičov je stále inovatívnejšia v sortimente profilov pre moderné LED aplikácie, ktoré sú čoraz populárnejšie a žiadanejšie.

V snahe pretvárať hliníkový profil na dokonalý produkt, rozmyšľame nad možnosťami umiestniť chladič v aplikácii čo najefektívnejšie. Dôkazom je aj použitie hliníkového profilu ako funkčného tela výrobku pri našich produktoch LED svetiel (viď zadná strana). Verím, že naše dlhodobé úsilie podporiť zákazníka v riešení skúsenosťou, sa trvalo podpisuje na našom partnerstve s Vami a v konečnom dôsledku sa prejaví na kvalite Vásšho produktu. V tomto smere stále posilňujeme naše personálne a technologické kapacity. Tento rok realizujeme projekt rozšírenia výrobných kapacít na 9 obrábacích centier. Úroveň služieb je prioritou pre spol. GAMAalumínium a ani tu neostávame nič dlžní. Vybudovaním samostatného obchodného oddelenia poskytujeme pre Vás stále komfortnejší servis.

Dnes možno konštatovať, že firma úspešne presadzuje svoju stratégiu podnikania v regióne strednej Európy, keď sme v priebehu roku 2013 spracovali o tretinu viac chladiacich profilov ako v roku 2012. V spolupráci s našimi obchodnými partnermi je nás sortiment v ponuke na trhoch Českej republiky, Poľsku, Maďarsku, Nemecku a v krajinách Beneluxu. Okrem toho, úspešne realizujeme zákazky pre partnerov v Anglicku, Švédsku, Francúzku, Rakúsku a Taliansku.

Prezentáciu na výstavách a kontakt s Vami považujeme za najdôležitejšie pri získavaní spätej väzby. Počas účasti na medzinárodných výstavách MEE Dubaj, AMPER Brno, ELEKTRO MOSKVA, ELOSYS Trenčín a MIDEST Paríž sa aj tento rok radi stretneme a inšpirujeme Vašim záujmom o výrobky GAMAalumínium.

S úctou

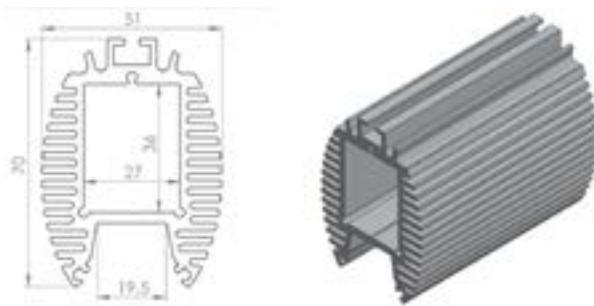

Marián Gahír
konateľ

Od hliníkového profilu po finálny výrobok

Disponujeme modernými strojnými zariadeniami, automatickými pílami, flotilou CNC obrábacích centier, zváracím robotom, gravírovačkou až po zariadenia na anodickú oxidáciu hliníka (elox). To znamená, že Vám vieme sprostredkovať kompletnejšiu zákazku od pílenia až po povrchovú úpravu.

Profiles available

GAMAaluminium disponuje viac ako stovkou vlastných lisovacích foriem po celej Európe. Medzi nimi nájdete veľký výber z chladičových, krabicových alebo konštrukčných profílov. Stačí si len vybrať.

Customer profiles

Nenašli ste vhodný profil? Dokážeme Vám sprostredkovať vlastný profil bez podmienky minimálneho odberného množstva. Jednoducho, navrhnite profil a pošlite výkres.

Pílenie hliníkových profílov

Pílenie ako najjednoduchšiu a zároveň najčastejšiu požiadavku na výrobu, obslúžia na našom pracovisku 3 kotúčové píly. Zabezpečíme tak pílenie profílov zo štandardných dĺžok 2, 4 a 6m priamo s nášho skladu na množstvo, ktoré potrebujete.

CNC opracovanie

CNC opracovanie je najvhodnejší spôsob ako s presnosťou opracovať hliníkové chladiče podľa Vašich požiadaviek. Našich 8 CNC centier v prevádzke uspokojí zákazky včas a v požadovanej kvalite.

Robotized assembly

Potrebuje veľkoformátový chladič alebo výrobok nadrozmerných tvarov? Nie je problém. Disponujeme automatickým zváracím robotom ktorý dokáže spojiť viac kusov chladičov a tým vytvoriť jeden veľký. Máme zákazky na veľké chladiče, používané v trakčných systémoch elektrických vozidiel. Jednoducho na veľkosti skutočne nezáleží.

Eloxovanie a titanovanie

Je dôležitou súčasťou finálnych výrobkov. Zabráni prirodzenému oxidovaniu hliníka vplyvom atmosférického kyslíka na hliník, ktorá je závislá od vplyvu prostredia a času. Podľa toho sa mení vrstva oxidu, vzhlad hliníkového materiálu jeho tepelná vodivosť a farebná stálosť. Okrem funkčnej stránky spína aj estetické požiadavky po aplikácii vhodnej povrchovej úpravy. Realizujeme povrchovú úpravu v odtieňoch prírodná, čierna, zlatá, modrá, červená ...

Quality

Neustále sa rozvíjame a rastieme v oblasti technického rozvoja v oblasti personálnej, ako aj v oblasti zlepšovania kvality poskytovaných služieb, čo dokazuje aj získanie a udržiavanie systému kvality. Sme držiteľmi certifikátov ISO 9001:2008, ISO 14001:2004, ISO 18001:2007.

**Dear customers and business partners**

Traditionally at the time of the exhibition AMPER, I would like to present the new product catalogue GAMAalumínium to you. Our offer of the heatsinks has been more and more innovative in the assortment of the profiles intended for the advanced LED applications that are very popular and required.

In sake of Aluminum profile transformation to a perfect product, we considered the possibility to install the heatsink in the most effective way in application. Trust, we used the Al-profile as a functional body of the product (LED light – see the reverse page). I hope, that our long-term efforts aimed for supporting the customers with this experience has paid off in the form of our partnership and will definitely influence the quality of your product. In this term, we have strengthened our personnel and technology capacities. In this year, we will implement the project of production capacity expansion to 9 machining centers. High quality of our services represents a priority of company GAMAalumínium and we didn't owe anything to our credit. We can provide more comfortable services to you through the newly built detached sales department.

Today we can state that the company has successfully enforced its business strategy in the Central European region. During 2013, we produced by one third more profiles than in year 2012. In cooperation with our business partners, our product mix has been offered on the markets of the Czech Republic, Poland, Hungary, Germany and the Benelux countries. Moreover, we have successfully fulfilled orders for our partners in Great Britain, Sweden, France, Austria and Italy.

We consider our presentation at the exhibitions and contact with you the most important aspect of obtaining the feedback. We will be glad to meet you also this year at the exhibitions MEE Dubai, AMPÉR Brno, ELEKTRO MOSKVA, ELOSYS Trenčín and MIDEST Paris and be inspired by your interest in the GAMAalumínium products.

Sincerely yours

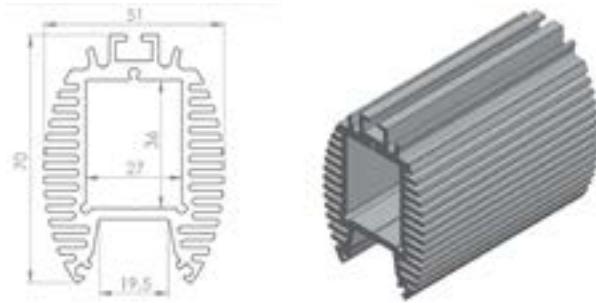

Marián Gahír
CEO

From aluminum profile to the final product.

We dispose with the modern machinery, automatic saws, a fleet of CNC machining centers, welding robot, engraving equipment to the anodic oxidation of aluminum (anodized). This means that we can arrange a complete order from sawing to surface treatment finish.

Large selection of profiles available at stock

GAMAaluminium owns more than a hundred of custom extrusion tools over Europe. Among them you will find a great selection of heatsink, boxed or structural profiles. Just choose.

Customers profile

Haven't you found a suitable one? Don't worry. We can as one of the few companies to mediate you your own profile with no conditions for the minimum order amount.

Al Profile sawings

Three circular cutters provide for sawing as the easiest and most frequent production request. We offer sawing of profiles from standard 2,4 and 6 m length directly taken from our warehouse in required amount.

CNC machining

CNC machining refers to most suitable way of precise Al-heatsinks machining as required. Our eight CNC centers can satisfy your orders in timely manner and required quality.

Robotic welding

Need large format heatsink or product oversized shapes? There is no problem. We dispose an automatic welding robot that can combine multiple pieces of heatsinks and thereby create one large. We have a contract for a large cooler, used for traction systems of electric vehicles. Simply, the size really does not matter.

Aluminum surface treatment

This procedure is an important part of finished products, eliminating natural oxidation of Aluminum caused by atmospheric Al, depending on the product ambiance. Oxide layer and Al-material image changes with time upon environmental effects, causing change also to thermal conductivity and color stability of Al-materials. Along with functional aspect, Al-treatment meets also esthetic requirements after application of suitable surface treatment. We usually provide for natural and black surface treatment but also golden, blue or red, based on customer needs

Quality

We develop and grow up constantly whether in technological development, in human resources field as well as in field of improving the quality of services. The proof of this is the maintenance of a quality system. We hold ISO 9001:2008, ISO 14001:2004, ISO 18001:2007.

Všeobecný popis

General description

Hliníkové chladiče

sa vyrábjajú z lisovaných profílov, ktoré nakupujeme od rôznych domácich a zahraničných výrobcov. Profíly nakupujeme a skladujeme v dĺžkach 2000 – 4000 mm.

Niekteré typy chladičov v aktuálnej ponuke sa môžu mierne líšiť od profilu uvedeného v katalógu, jedná sa hlavne o tvar rebier, môžu byť rovné alebo mierne zvlnené, hrúbka rebier a pod. Túto skutočnosť zo zákazníkom konzultujeme pred dodávkou.

Špecifická hmotnosť hliníka je 2,7 kg/dm³

Dodávané profily sú v súlade so smernicou RoHS Directive

Normy

Hliníkové profily sú lisované podľa norem EN 755-5 až 9. Tieto normy hovoria o prípustných odchýlkach skutočných profílov od menovitých hodnôt.

Materiál použitý na chladiče je AW6060 (Al Mg 0,7 Si) (ZH profily), príp. AW6063 (Al Mg Si) (ostatné profily), ktorých chemické zloženie zodpovedá hodnotám stanoveným v norme EN 573-3.

Povrch profilov je podľa normy EN 755-1.

Pri opracovaní, pokiaľ nie sú vo výkresovej dokumentácii uvedené tolerancie a iné požiadavky, sa riadime všeobecnými toleranciami STN ISO 2768-1 triedy m, ktoré sa týkajú dĺžok , uhlov , rovinnosti ,zrazení hrán , povrchu a pod.

Ponúkame ...

Profíly dodávame napíllené na požadované dĺžky, môžeme ich opracovať na CNC strojoch podľa dodanej dokumentácie, chladiče v prípade potreby zvárame na robotizovanom pracovisku a ponúkame aj povrchovú úpravu eloxovaním (elox prírodný, čierny, žltý, červený, modrý) alebo titanovaním .

Na požiadanie vieme zabezpečiť v spolupráci so SAV Bratislava meranie tepelného odporu pre konkrétny chladič.

V prípade že si z našej ponuky nevyberiete žiadny chladič, vieme zabezpečiť výrobu nového profilu podľa vašej požiadavky, prípadne zabezpečiť Vám profil od iných dodávateľov.

Aluminium Heatsinks

are manufacturing from pressed profiles, which we buy from various domestic and foreign producers. The profiles we buy and store in lenghts 2000 – 4000 mm.

Some types of heatsinks in the current offer may be slightly different from the profile specified in the catalog, mostly on the shape of the ribs - may be straight or slightly wavy, the thickness of the ribs and etc. This fact we consult with the customer before delivery.

A specific weight of aluminium is 2,7 kg/dm³

Supplied profiles are in accordance with the RoHS Directive

Standards

AL profiles are pressed according to a standard EN755-5 to 9. These standards speak about a tolerance of the actual profiles from the nominal values.

A material used for heatsinks is AW6060 (Al Mg 0,7 Si) (ZH profiles) or AW6060 (Al Mg Si) (other profiles) whose chemical composition corresponds to the values set down in standard EN 573-3.

A surface of the profiles is according to a standard EN 755-1.

Regarding to a machining, if the tolerance and other requirements are not mentioned in drawing documentation we follow the general tolerances STN ISO 2768 – 1 class m, concerning to a lengths, angles, flatness, deducting the edge, surface and etc.

We offered ...

We deliver a profiles cutted with required lenghts, they can be machined by CNC machines according to a received documentation, in case of need we weld a heatsink at welding robotic workstation and we offer the surface treatment as well (natural, black, yellow, red, blue) or titan.

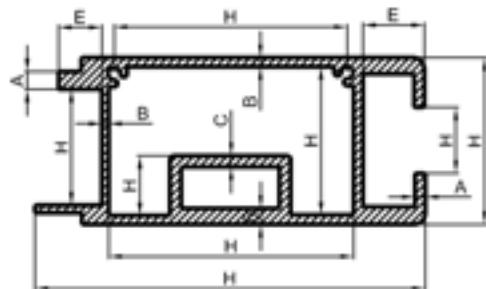

On request we provide in cooperation with SAS Bratislava measurement of thermal resistance for a particular heatsinks.

In case you do not choose any heatsink from our offer, we are able to provide a produce of new profile according to your requirements or provide a profile from another suppliers.

Meranie tepelného odporu chladičov (R_{th})

Tepelný odpor chladičov elektronických súčiastok je dôležitý údaj pre konštruktérov elektronických zariadení, ktorý umožňuje optimálne navrhnuť odvod stratového tepla súčiastky pri dodržaní jej maximálnej dovolenej pracovnej teploty a to pri minimalizácii rozmerov chladiča. Pri jednoduchších geometrických tvaroch je možné stanoviť tepelný odpor chladiča s dosťatočnou presnosťou aj výpočtom, no pre komplexnejšie tvary so zložitým obtekaním vzduchu okolo chladiča je často potrebné uskutočniť meranie tepelného odporu.

Definícia tepelného odporu

Tepelný odpor chladiča R_{th} je definovaný ako podiel rozdielu maximálnej teploty chladiča T_{ch} a teploty okolitého vzduchu T_v k tepelnému výkonu P rozptyľovaného chladičom do okolia v rovnovážnom stave:

$$R_{th} = \frac{T_{ch} - T_v}{P}$$

Rovnovážny stav je stav, kedy dodávaný výkon do chladiča je rovný tepelnému výkonu rozptyľovaného chladičom do okolia. Z toho tiež vyplýva, že pri konštantnej teplote okolitého vzduchu sa teplota chladiča v rovnovážnom stave nemení. Ak tepelný výkon dodávaný chladiču je generovaný ako Joule-Lenzovo teplo vznikajúce ako tepelná strata na odpore R výhrevného telesa, ktorým preteká jednosmerný prúd I a vzniká na ňom úbytok napäcia U , potom tepelný výkon dodávaný chladiču je rovný elektrickému výkonu dodávanému do výhrevného telesa:

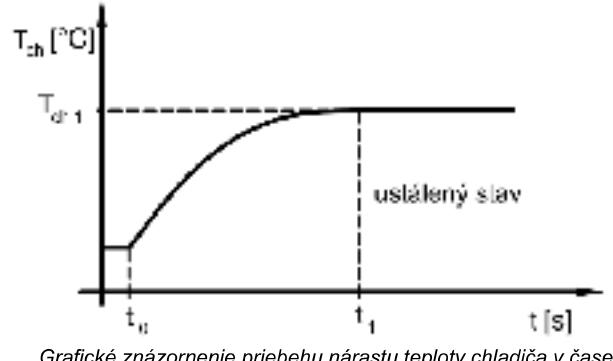

$$P = U \cdot I$$

Metóda merania

Do chladiča je pomocou elektrického výhrevného telesa počínajúc časom t_0 dodávaný zvolený elektrický výkon, ktorý je so 100% účinnosťou transformovaný ako Joule-Lenzovo teplo na tepelný výkon. Teplota chladiča postupne narastá až dosiahne platô, ktoré signalizuje dosiahnutie rovnovážneho stavu.

Za tohto stavu je dodávaný elektrický výkon do výhrevného telesa rovný tepelnému výkonu, ktorý je rozptyľovaný chladičom do okolia. Za ustáleného stavu sú odmerané všetky veličiny potrebné pre výpočet tepelného odporu a následne je tepelný odpor chladiča vypočítaný podľa vzorca:

$$R_{th} = \frac{T_{ch} - T_v}{U \cdot I}$$

Pre jednoduchosť sa často v katalógoch s chladičmi udáva len jedna hodnota tepelného odporu R_{th} , zmeraná pri takom stratovom výkone, pri ktorom teplota chladiča za danej teplote okolitého vzduchu $20\text{ }^{\circ}\text{C}$ dosiahne zvolenú hodnotu. Ak je chladič určený na chladenie bežných elektronických súčiastok, zvolenou hodnotou teploty býva najčastejšie teplota $75\text{ }^{\circ}\text{C}$.

Podmienky merania

- teplota chladiča $75\text{ }^{\circ}\text{C}$
- teplota okolitého vzduchu v rozsahu 20 až $22\text{ }^{\circ}\text{C}$
- tlak vzduchu v rozsahu 980 až 1020 hPa
- relatívna vlhkosť vzduchu 20 až 80%
- normálne zloženie vzduchu ($\text{D } 78\%, \text{ O } 21\%, \text{ Ar } 0,9\%, \text{ CO}_2 0,03\%$)
- meranie R_{th} bolo uskutočnené bez umejely akcelerácie prúdenia vzduchu v okolí chladiča
- teplota vzduchu bola meraná vo vzdialosti 50 mm pod spodným okrajom chladiča
- pri meraní tepelného odporu boli chladiče umiestnené tak aby bolo zabezpečené maximálne samovoľné prúdenie zohriateho vzduchu

Namerané výsledky tepelného odporu sú platné za spomenutých podmienok merania !!!

Tepelné odpory uvádzané v katalógu sú len informatívne.

Measurement of heatsinks thermal resistance (R_{th})

Thermal resistance of electronic parts heatsinks represents important information for electronic equipment constructors that allows for optimum design of the part thermal loss outlet upon maintaining the maximum working temperature limit of the part and minimized heatsink dimensions. In case of simpler geometric dimensions, it is possible to determine the heatsink thermal resistance with accurate calculation but it is often required to measure thermal resistance in case of more complex shapes with complicated air flow around the heatsink.

Definition of thermal resistance

Thermal resistance of heatsink R_{th} is defined as a proportion of difference of maximum heatsink temperature T_{ch} and ambient temperature T_v to thermal output P dispersed by the heatsink to surrounding area in the state of equilibrium:

$$R_{th} = \frac{T_{ch} - T_v}{P}$$

The state of equilibrium is a condition when power input in the heatsink equals to thermal output dispersed by the heatsink in surrounding area. Accordingly, heatsink temperature in the equilibrium status doesn't change at constant ambient temperature.

If thermal output supplied to the heatsink is generated as the Joule-Lenz heat generated as a thermal loss of heating body resistance R that DC current passes through/ voltage drop U occurs thereon, then thermal output supplied to the heatsink equals to electric output supplied to the heating body:

$$P = U \cdot I$$

Measurement method

Selected electric output is supplied to the heatsink beginning at the time t_0 , that is transformed as a Joule-Lenz heat to thermal output with 100% efficiency. The heatsink temperature gradually increases up to the level that signalizes reached equilibrium status..

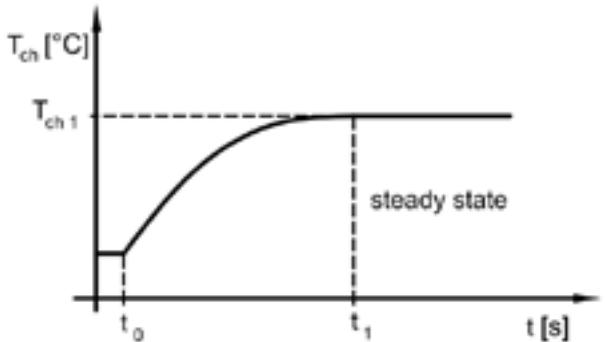

In this condition, electric output supplied to heating body equals thermal output dispersed by the heatsink to the surrounding area. All parameters required to calculation of thermal resistance are measured at the status of equilibrium and subsequently, the heatsink thermal resistance is calculated according to the following formula:

$$R_{th} = \frac{T_{ch} - T_v}{U \cdot I}$$

For simplification purposes, the catalogue with heatsink often specify only one value of thermal resistance R_{th} , measured at such output loss when the heatsink temperature at ambient temperature 20 °C reaches the selected value. If a heatsink is intended to cool down common electronic parts, chosen temperature usually refers to 75 °C.

Measurement terms

- Heatsink temperature 75 °C
- Ambient temperature variance within 20 - 22 °C
- Air pressure within 980 - 1020 hPa
- Relative air humidity within 20 - 80 %
- Standard air composition (D 78%, O 21%, Ar 0,9%, CO₂ 0,03%)
- Measurement of R_{th} was conducted without artificial air flow acceleration around the heatsink
- Air temperature was measured at distance 50 mm under the bottom heatsink edge
- During thermal resistance measurement, the heatsinks were located so as maximum self-flowing of heated air was ensured.

Graphical illustration of heatsink temperature increase in real time.

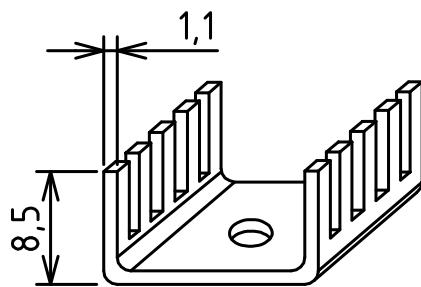

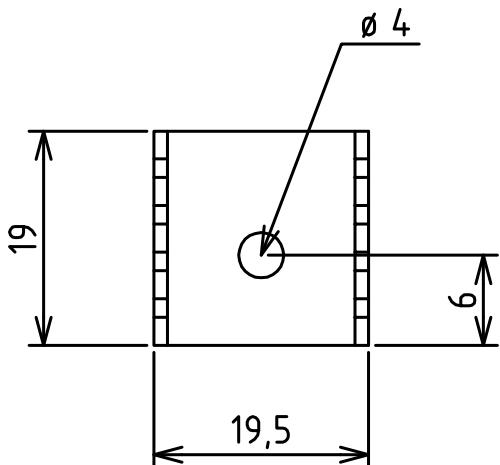

Measured values of thermal resistance are valid upon the above-mentioned measurement conditions.

**Thermal resistance values stated in the catalogue are only of information nature.
Currently, new measurements are conducted and the measurement values will be gradually completed.**
