Definitions

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 30 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $<$, \leq , $>$, \geq , \pm , or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with $<$, $>$ or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

Specifications

Mechanical data

Connector type	R&S®ZN-Z170 models .02/.12/.22	type N, 50 Ω, male
	R&S®ZN-Z170 models .03/.13/.23	type N, 50 Ω, female
	R&S®ZN-Z135 models .02/.12/.22	3.5 mm, male
	R&S®ZN-Z135 models .03/.13/.23	3.5 mm, female
	R&S®ZN-Z129/-Z129E models .02/.12/.22	2.92 mm, male
	R&S®ZN-Z129/-Z129E models .03/.13/.23	2.92 mm, female
Gauge	R&S®ZN-Z170 models .02/.12/.22	5.28 mm to 5.36 mm
	R&S®ZN-Z170 models .03/.13/.23	5.18 mm to 5.26 mm
	R&S®ZN-Z135/-Z129	0 mm to 0.08 mm
	R&S®ZN-Z129E	0 mm to 0.05 mm
Inner conductor material	R&S®ZN-Z170/-Z135/-Z129/-Z129E	Au-plated age-hardened CuBe alloy
Outer conductor material	R&S®ZN-Z170/-Z135/-Z129	passivated stainless steel
	R&S®ZN-Z129E	Au-plated age-hardened CuBe alloy
Body material	R&S®ZN-Z170/-Z135/-Z129	black anodized aluminum
	R&S®ZN-Z129E	blue anodized aluminum

Electrical data

Effective system data

The specified effective system data are established after performing a suitable system error calibration, e.g. UOSM, at an R&S®ZNA, R&S®ZVA, R&S®ZNB or R&S®ZVT vector network analyzer, using the model data of the calibration kit, which are stored on the vector network analyzer. This data is valid between +18 °C and +28 °C, at a measurement bandwidth of 10 Hz and a nominal power of 0 dBm at the calibration ports. The calibration kit is fully functional down to 0 Hz, with effective system data as specified below.

Extended warranty with accredited calibration coverage, three years	R&S®AW3	
Extended warranty with accredited calibration coverage, four years	R&S®AW4	

Extended warranty with a term of one to four years (WE1 to WE4)

Repairs carried out during the contract term are free of charge ¹¹. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration (CW1 to CW4)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs ¹¹ and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.

Extended warranty with accredited calibration (AW1 to AW4)

Enhance your extended warranty by adding accredited calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated under accreditation, inspected and maintained during the term of the contract. It includes all repairs ¹¹ and accredited calibration at the recommended intervals as well as any accredited calibration carried out during repairs or option upgrades.

Note:

All models of R&S®ZN-Z170, R&S®ZN-Z135 and R&S®ZN-Z129 are manufactured for Rohde & Schwarz by: Rosenberger Hochfrequenztechnik GmbH & Co. KG, Hauptstraße 1, 83413 Fridolfing, Germany

All models of R&S®ZN-Z129E are manufactured for Rohde & Schwarz by: SPINNER GmbH, Erzgießereistr. 33, 80335 München, Germany

¹¹ Excluding defects caused by incorrect operation or handling and force majeure. Wear-and-tear parts are not included.

Service that adds value

- ▶ Worldwide
- ▶ Local and personalized
- ▶ Customized and flexible
- ▶ Uncompromising quality
- ▶ Long-term dependability

Rohde & Schwarz

The Rohde&Schwarz technology group is among the trail-blazers when it comes to paving the way for a safer and connected world with its leading solutions in test & measurement, technology systems, and networks & cybersecurity. Founded more than 85 years ago, the group is a reliable partner for industry and government customers around the globe. The independent company is headquartered in Munich, Germany and has an extensive sales and service network with locations in more than 70 countries.
