

mikromedia+

for PIC32MX7®

Amazingly compact, all-on-single-pcb development board carrying 4.3" TFT Touch Screen and lots of multimedia peripherals, all driven by powerful **PIC32MX795F512L** microcontroller.

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

A handwritten signature in white ink, appearing to read 'N. Matic', is positioned on the right side of the page. The signature is fluid and cursive, with a large initial 'N' and 'M'.

Introduction to mikromedia+ for PIC32MX7®

The **mikromedia+ for PIC32MX7®** is a compact development system which allows development of devices with multimedia contents. The central part of the system is a 32-bit 100-pin **PIC32MX795F512L** microcontroller. The mikromedia+ for PIC32MX7® feature lots of on board modules such as stereo MP3 codec, **4.3" TFT 480x272** touch screen display, port expander, accelerometer, microSD card slot, buzzer, IR receiver, RGB LED diode, PIN photodiode, temperature sensor, 2.4GHz RF transceiver, Ethernet transceiver, 8 Mbit flash memory, Li-Polimer battery charger etc. The board also contains MINI-B USB connector, power screw terminals, 2x5 mikroProg™ connector, two 1x26 connection pads, ON/OFF switch and other. It comes pre-programmed with USB HID bootloader, but can also be programmed with **mikroProg™ for PIC®, dsPIC® and PIC32®** external programmer. mikromedia is compact and slim, and perfectly fits in the palm of your hand, which makes it a convenient platform for mobile and other multimedia devices. We have also prepared a **mikromedia+ SHIELD for PIC32MX7®** extension board which enables you to easily expand the functionality of your board.

System Specification

power supply

Via USB cable (5V DC) or via screw terminals (5 - 12V DC)

power consumption

65mA with erased MCU
(when on-board modules are inactive)

board dimensions

119.54 x 78mm (4.71 x 3.07inch)

weight

~115g (0.253lbs)

Package Contains

- 01 Damage resistant protective box

- 02 mikromedia+ for PIC32MX7[®] development system

- 03 DVD with documentation and examples

- 04 mikromedia+ for PIC32MX7[®] user's guide

- 05 mikromedia+ for PIC32MX7[®] schematic

- 06 USB cable and microSD card

1. Power Supply

Figure 1-1:
USB power supply

Figure 1-2:
Battery power supply

Figure 1-3:
Screw terminals power supply

The mikromedia+ for PIC32MX7[®] board can be powered in three different ways: via USB connector using MINI-B USB cable provided with the board (**CN4**), via battery connector using Li-Polymer battery (**CN5**) or via screw terminals using laboratory power supply (**CN3**). After you plug in the appropriate power supply turn the power switch ON (**SW1**). The USB connection can provide up to 500mA of current which is more than enough for the operation of all on-board modules and the microcontroller as well. If you decide to use external power supply via screw terminals, voltage levels must be within **5-12V DC** range. Power **LED ON (GREEN)** indicates the presence of power supply. On-board battery charger circuit **MCP73832** enables you to charge the battery over USB connection or via screw terminals. **LED diode (RED)** indicates when battery is charging. Charging current is ~250mA and charging voltage is 4.2V DC.

Figure 1-4: Power supply schematic

2. PIC32MX795F512L Microcontroller

The mikromedia+ for PIC32MX7® development board comes with the 100-pin **PIC32MX795F512L** microcontroller. This high-performance **32-bit** microcontroller has integrated modules, such as 512K of flash and 128K of RAM easily handling demanding applications.

Key microcontroller features

- Up to **125 DMIPS** Operation (80MHz);
- 512K bytes of Flash memory;
- 128K bytes of RAM memory;
- up to 85 I/O pins;
- 16-bit timers;
- 8MHz internal oscillator, 32kHz RTCC, PLL;
- 6xUART, 4xSPI, 5xI²C, 2xCAN, ADC etc., and
- Ethernet, USB etc.

3. Programming the Microcontroller

Figure 3-1:
PIC32MX795F512L
microcontroller

The microcontroller can be programmed in two ways:

- 01 Using USB mikroBootloader
- 02 Using external mikroProg™ for PIC®, dsPIC®, PIC32® programmer

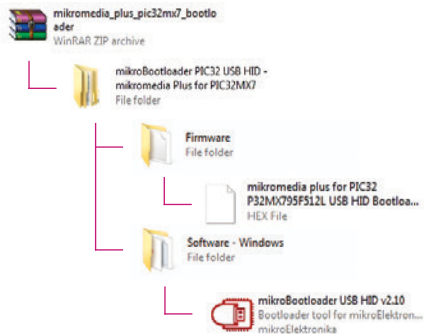

Programming with mikroBootloader

Microcontroller is pre-programmed with USB HID Bootloader, which can be used to upload new device firmware. To transfer firmware .HEX file from a PC to MCU you need to use mikroBootloader USB HID application, which can be downloaded from:

http://www.mikroe.com/downloads/get/2031/mikromedia_plus_pic32mx7_bootloader.zip

Upon download, unzip it to desired location and start the mikroBootloader application:

step 1 - Connecting mikromedia

Figure 3-2: USB HID mikroBootloader window

- 01 In order to start, connect the USB cable or (if already connected) press the **Reset** button on your mikromedia+ board. Click the **Connect** button within 5s to enter the bootloader mode, otherwise the existing microcontroller program will be executed.

step 2 - Browsing for .HEX file

Figure 3-3: Browse for HEX

- 01 Click the **Browse for HEX** button and from a pop-up window (**Figure 3.4**) choose the .HEX file that will be uploaded to MCU memory.

step 3 - Selecting .HEX file

Figure 3-4: Selecting HEX

- 01 Select .HEX file from the Open dialog window.
- 02 Click the **Open** button.

step 4 - Uploading .HEX file

Figure 3-5: Begin uploading

- 01 In order to upload .HEX file click the **Begin uploading** button.

Figure 3-6: Progress bar

- 01 .HEX file uploading can be monitored via progress bar.

step 5 - Finish Upload

Figure 3-7: Restarting MCU

- 01** Click the **OK** button after uploading is finished. The board will be automatically reset and after 5 seconds your new program will be executed.

Figure 3-8: mikroBootloader ready to use

Programming with mikroProg™ Programmer

Figure 3-9:
mikroProg™
connector

The microcontroller can be programmed with external **mikroProg™ for PIC®, dsPIC® and PIC32® programmer** and **mikroProg Suite™ for PIC® software**. The external programmer is connected to the development system via 2X5 mikroProg™ connector, **Figure 3-9**. **mikroProg™** is a fast USB 2.0 programmer with hardware Debugger support. It supports IC10®, PIC12®, PIC16®, PIC18®, dsPIC30/33®, PIC24® and PIC32® devices from Microchip®. Outstanding performance, easy operation and elegant design are its key features.

Figure 3-10: mikroProg™ connection schematic

mikroProg Suite™ for PIC® Software

The **mikroProg™** programmer requires special programming software called **mikroProg Suite™ for PIC®**. It can be used for programming all Microchip® microcontroller families, including PIC10®, PIC12®, PIC16®, PIC18®, dsPIC30/33®, PIC24® and PIC32®. Software has intuitive interface and SingleClick™ programming technology. Download the latest version of **mikroProg Suite™** and your programmer is ready to program new devices. **mikroProg Suite™** is updated regularly, at least four times a year, so your programmer will be more and more powerful with each new release.

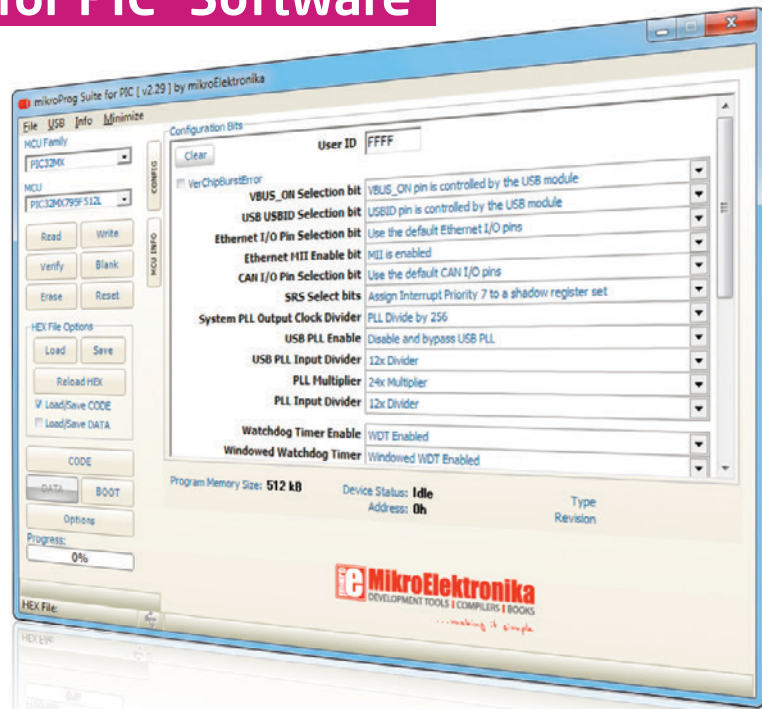

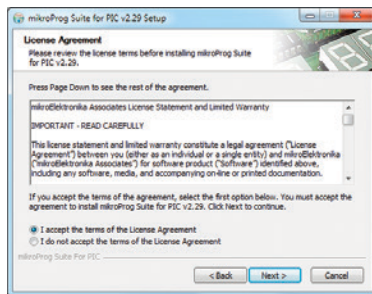

Figure 3-11: Main window of mikroProg Suite™ for PIC® programming software

Software Installation Wizard

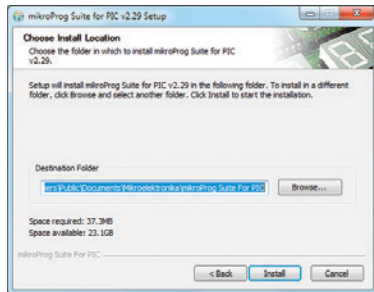

01 Start Installation

02 Accept EULA and continue

03 Install for all users

04 Choose destination folder

05 Installation in progress

06 Finish installation

4. Reset Button

The board is equipped with reset button, which is located on the front side of the board. One press on the reset button will generate a low voltage level on the microcontroller reset pin (input). Reset button can also be externally provided through the **pin 27** on the side headers.

Figure 4-1:
Reset button

Figure 4-2: Reset button connection schematic

5. Crystal Oscillators and 2.048V Reference

The board is equipped with **01 16MHz crystal oscillator (X4)** circuit that provides external clock waveform to the microcontroller OSC1 and OSC2 pins. This base frequency is suitable for further clock multipliers and ideal for generation of necessary USB clock, which ensures proper operation of bootloader and your custom USB-based applications. The board also contains **02 32.768kHz crystal oscillator (X5)** which provides external clock for internal RTC module. Microcontroller ADC requires an accurate source of reference voltage signal. That is why we provide the external **03 voltage reference** to the microcontroller VREF pin which is **2.048V**.

Figure 5-1: Crystal oscillator and 2.048V reference

6. Port Expander

Figure 6-1:
Port Expander

mikromedia+ for PIC32MX7[®] features a 16-bit I/O port expander module **MCP23S17** which communicates with PIC32MX795F512L microcontroller via SPI serial interface. This module enables you to expand the number of microcontroller I/O pins with two 8-bit I/O ports (PORTA and PORTB). Each of them consists of registers for input, output and polarity selection. In addition, the **MCP23S17** module contains interrupt and reset pins and has 25mA sink/source capability per I/O pin.

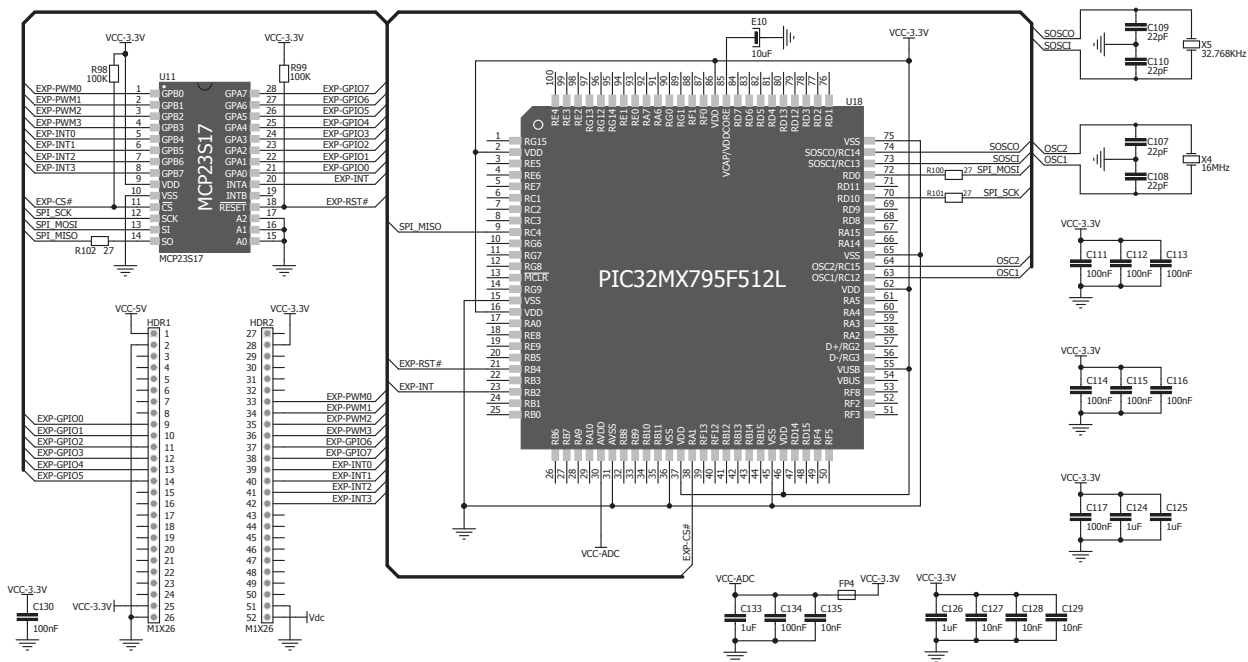

Figure 6-2: Port Expander connection schematic

7. microSD Card Slot

The board contains **01** microSD card slot for using **02** microSD cards in your projects. It enables you to store large amounts of data externally, thus saving microcontroller memory. microSD cards use Serial Peripheral Interface (**SPI**) for communication with the microcontroller. Ferrite and capacitor are provided to compensate the voltage and current glitch that can occur when pushing-in and pushing-out microSD card into the socket. Proper insertion of the microSD card is shown in **Figure 7-1**.

Figure 7-1:
microSD Card Slot

Figure 7-2: microSD Card Slot module connection schematic

8. Touch Screen

The development system features a **4.3" TFT 480x272 display** covered with a **resistive** touch panel. Together they form a functional unit called a **touch screen**, **Figure 8-1**. It enables data to be entered and displayed at the same time. The TFT display is capable of showing graphics in **256K** different **colors**.

Figure 8-1: Touch Screen

Figure 8-2: Touch Screen connection schematic

9. Audio Module

Figure 9-1:
On-board
VS1053
MP3 codec

mikromedia+ for PIC32MX7® features stereo audio codec **01 VS1053**. This module enables audio reproduction and sound recording by using **02 stereo headphones with microphone** connected to the system via a **03 3.5mm** connector CN2. All functions of this module are controlled by the microcontroller over Serial Peripheral Interface (**SPI**). IN and OUT channels are also provided on side headers.

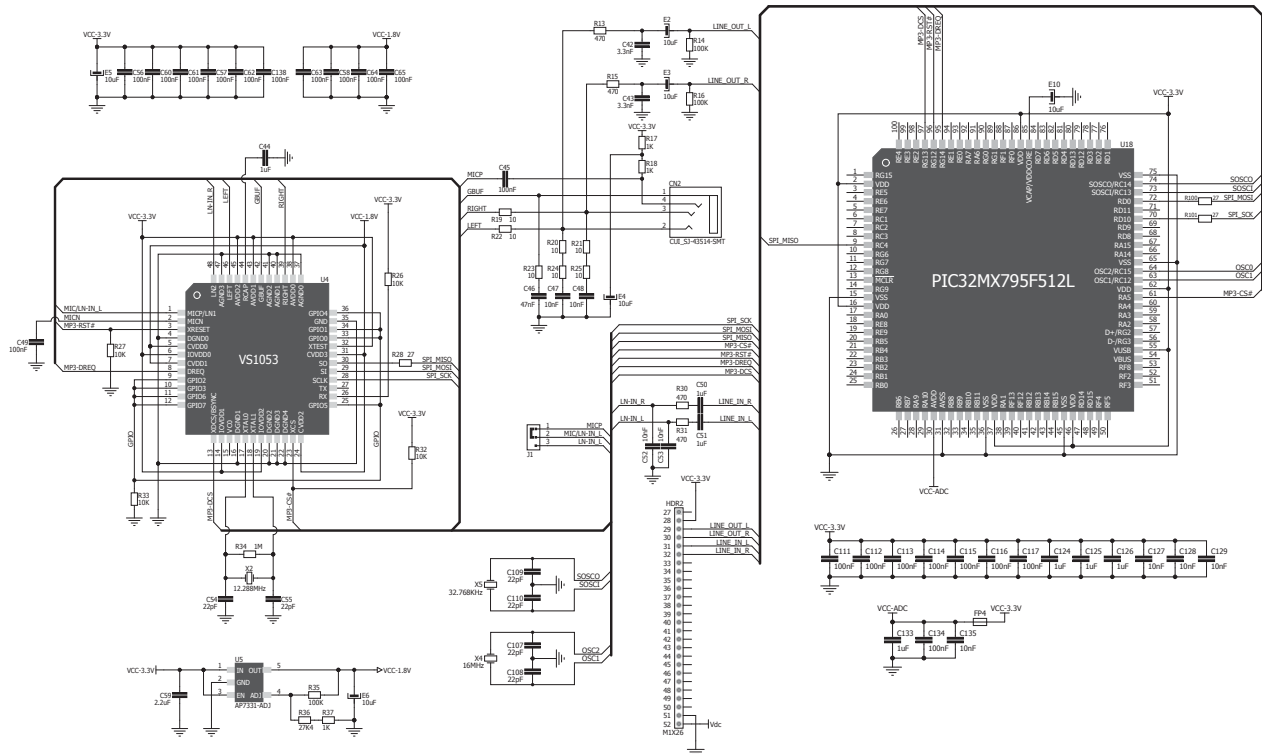

Figure 9-2: Audio module connection schematic

10. USB DEVICE connection

Figure 10-1:
Connecting USB
cable to MINI-B USB
connector

PIC32MX795F512L microcontroller has integrated USB module, which enables you to implement USB communication functionality to your mikromedia board. Connection with target USB host is establish over **01** MINI-B USB connector. For proper insertion of the **02** MINI-B USB cable refer to **Figure 10-1**.

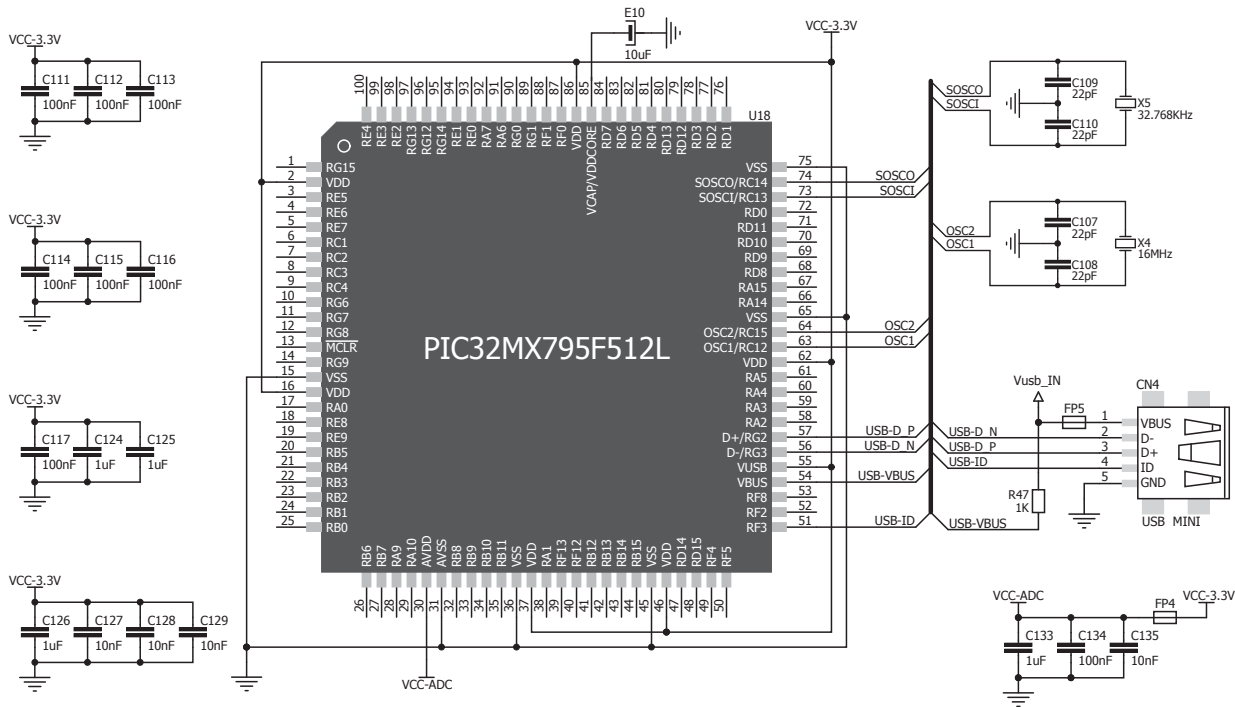

Figure 10-2: USB DEVICE module connection schematic

11. USB HOST connection

Note: When the device is working in USB HOST mode, it must not be mounted to other USB HOST.

Figure 11-1: Connecting USB cable to MINI-B USB connector via USB adapter

PIC32MX795F512L can also be used as USB HOST which enables microcontroller to establish connection with the target device (eg. USB keyboard, USB mouse, etc). The board provides necessary power supply to the target via TPS2041B IC. To connect **01** USB HOST cable, it is necessary to use the appropriate **02** MINI-B USB to USB type A adapter. For proper insertion refer to **Figure 11-1**.

12. Accelerometer

Figure 12-1:
Accelerometer
module

On board **ADXL345** accelerometer is used to measure acceleration in three axis: x, y and z. Most common use is to determine the screen orientation, but there are many other fields of usage. Communication between the accelerometer and the microcontroller is performed through **I²C** interface. There is an option to select the alternate accel address with jumper **J3**.

Figure 12-2:
Jumper J3

Figure 12-3: Accelerometer connection schematic

13. Flash Memory

Since multimedia applications are getting increasingly demanding, it is necessary to provide additional memory space for storing more data. The flash memory module enables the microcontroller to use additional **8Mbit** flash memory. It is connected to the microcontroller via the Serial Peripheral Interface (**SPI**).

Figure 13-1:
Flash memory
module

Figure 13-2: Flash memory module connection schematic

14. RF Transceiver

Figure 14-1:
RF transceiver antenna

Figure 14-2:
RF transceiver module

mikromedia+ for PIC32MX7® board features **RF transceiver** chip with **2.4GHz chip antenna**. It is suitable for wireless operation in the world wide ISM frequency band at 2.400 - 2.4835GHz with air data rate up to 2Mbps. RF transceiver module is connected to the microcontroller via the Serial Peripheral Interface (**SPI**). This RF transceiver module is widely used for wireless PC peripherals, remote controllers, VoIP headsets, game controllers, sensors, home and commercial automation, active RFID, toys and many more.

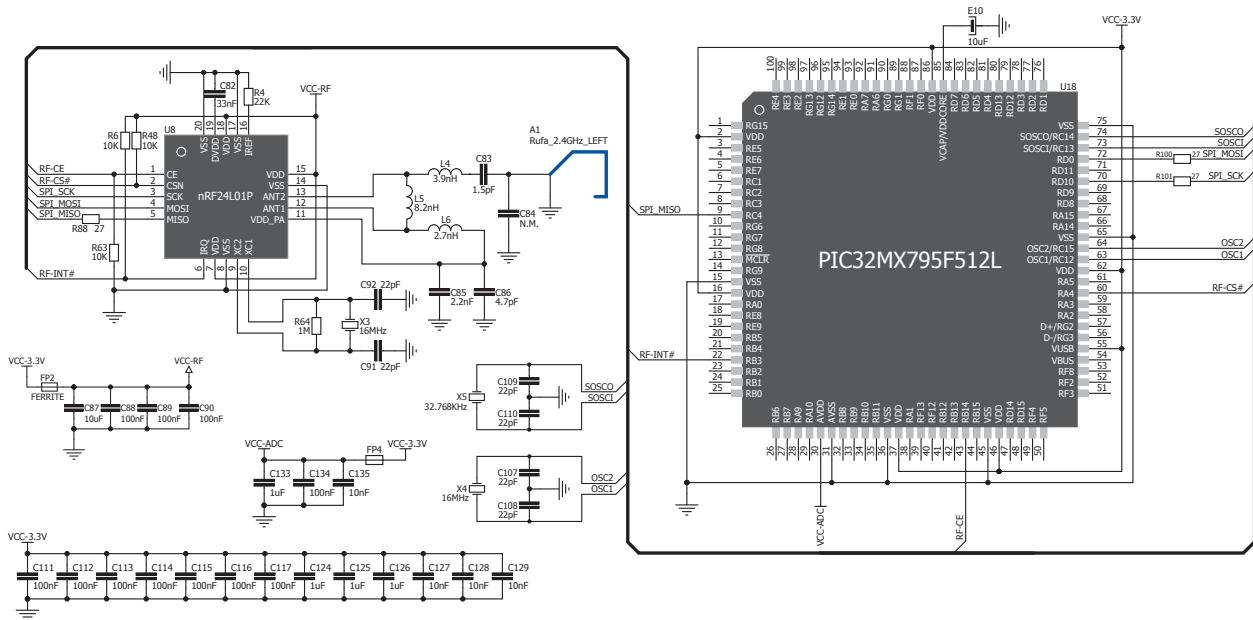

Figure 14-3: RF transceiver module connection schematic

15. Ethernet Transceiver

Figure 15-1: Ethernet transceiver module

The development system features an Ethernet transceiver module ideal for local area networking (LAN). Communication over Ethernet is based on data packets called frames. Each frame contains source and destination addresses and error-checking data so that damaged data can be detected and re-transmitted. If you want to establish connection with computer, router or other devices you need to use standard **RJ-45** connector which is provided on **mikromedia+ SHIELD for PIC32MX7®**. Communication lines are also provided over side headers.

16. Buzzer

The board is also equipped with piezo buzzer. It is an electric component which can be used to create sound when is provided with electrical signal. This is usually a PWM signal coming from a microcontroller pin. Frequency of the signal determines the pitch of the sound and duty cycle of the signal can be used to increase or decrease the volume.

Figure 16-1:
Buzzer module

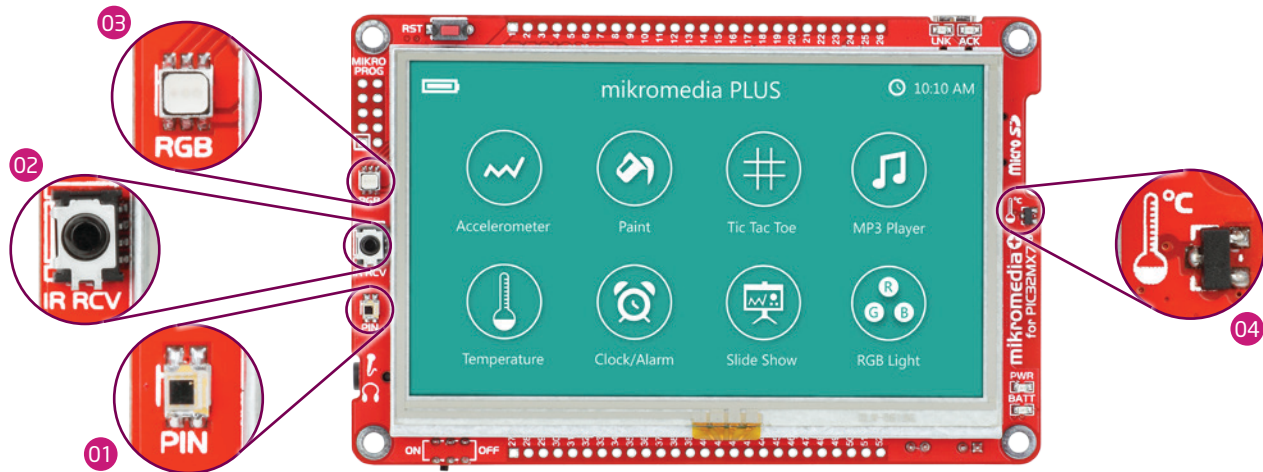

Figure 16-2: Buzzer module connection schematic

17. Other Modules

The board also contains other useful peripherals such as 01 PIN photodiode, 02 IR receiver, 03 RGB led diode and 04 analog temperature sensor. **PIN photodiode** is a type of photo detector. It has high sensitivity and response speed. It is connected to the microcontroller analog pin **RB8**. **IR receiver** is used in infrared remote control systems. The demodulated output signal obtained from IR module can be directly decoded by a microcontroller. Many of standard data formats are supported. **RGB (Red, Green, Blue) diode** can be used as a light indicator. Each color is driven separately by transistor. The **analog temperature sensor** converts temperature to analog voltage. It is directly connected to the microcontroller **RB9 analog pin**. Temperature measurement range of mikromedia+ for PIC32MX7® board is from -20° C to 70° C.

18. Pads

■ PWM
 ■ Interrupt
 ■ I2C
 ■ UART
 ■ Analog lines
 ■ SPI
 ■ CAN

Many microcontroller pins are available for further connectivity via two 1x26 rows of connection pads on both sides of the board. They are designed to match with the mikromedia+ SHIELD for PIC32MX7®

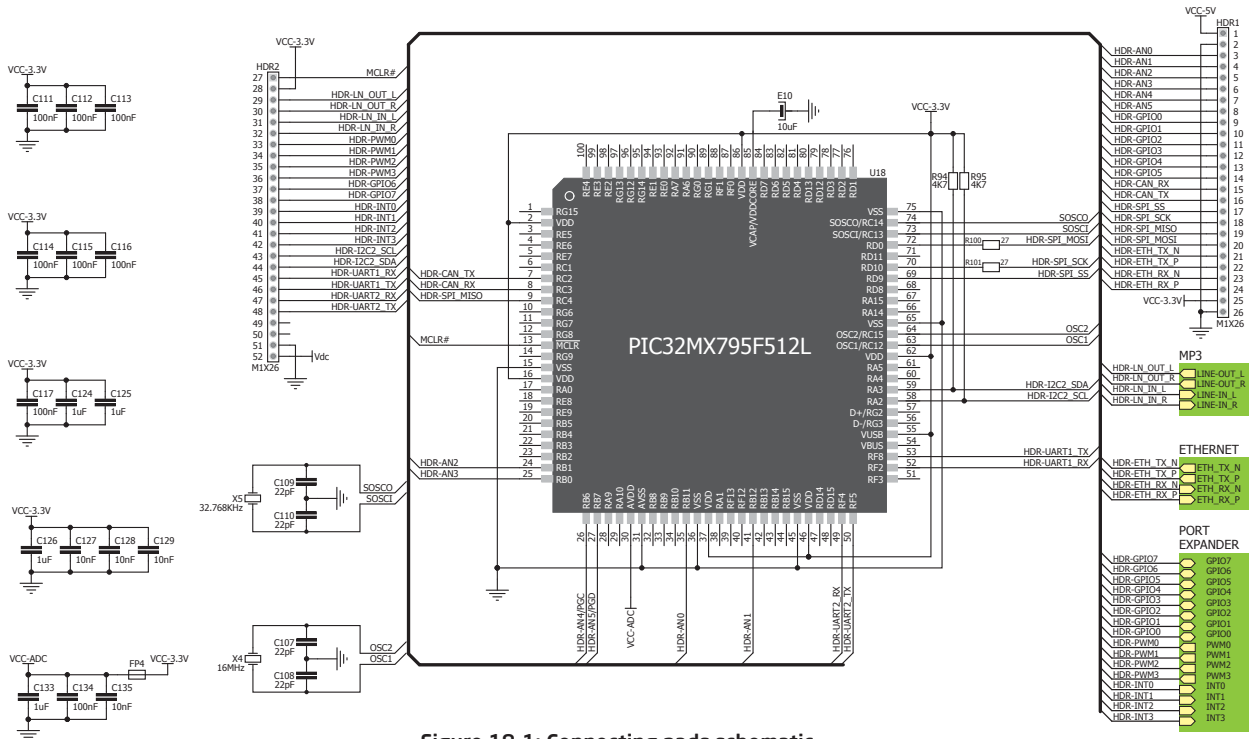

Figure 18-1: Connecting pads schematic

19. mikromedia+ SHIELD for PIC32MX7®

We have also made an extension board pin-compatible with your mikromedia+ board, which enables you to easily expand your basic board functionality. It is called **mikromedia+ SHIELD for PIC32MX7®**. The shield contains:

- 01 FTDI USB-UART chip
- 02 USB MINI-B connector
- 03 CAN transceiver
- 04 Screw terminals
- 05 mikroBUS sockets
- 06 Power supply screw terminals
- 07 Side connection pads
- 08 GNDs
- 09 Ethernet connector

20. Click boards are plug and play!

So far, MikroElektronika has released more than 60 mikroBUS™ compatible **click Boards™**. On average, one click board is released per week. Our intention is to enable you to easily expand with as many add-on boards as possible, so you will be able to easily expand the functionality of your development board. Each click board™ comes with a set of working example codes. Please, check the list of currently available boards on the following link:

22. What's next?

Your journey through each and every feature of mikromedia+ for PIC32MX7® board ends here. You got to know it's modules and organization. Now you are ready to use it. We are suggesting several steps which are probably the best way to begin with. We invite you to join the users of mikromedia™ brand. You will find very useful projects and tutorials and can get help from a large ecosystem of users. Welcome!

Compiler

You still don't have an appropriate compiler? Locate PIC® compiler that suits you best on the Product DVD provided with the package:

DVD://download/eng/software/compilers/

Choose between mikroC™, mikroBasic™ and mikroPascal™ and download fully functional demo version, so you can begin building your first applications.

Projects

Once you have chosen your compiler, and since you already got the board, you are ready to start writing your first projects. **Visual TFT software** for rapid development of graphical user interfaces will enable you to quickly create your GUI. It will automatically create necessary code which is compatible with MikroElektronika compilers. Visual TFT is rich with examples, which are an excellent starting point for your future projects. Just load the example, read well commented code, and check how it works on hardware. Visual TFT is also available on the Product DVD.
