

DOGXL240-7 GRAPHIC

240X128 INCL. CONTROLLER UC1611S

EA DOGXL240W-7 +
EA LED94X67-W

EA DOGXL240B-7 +
EA LED94X67-W

available in low quantities !
flat: 6.5mm with LED b./l. mounted

EA DOGXL240W-7 +
EA LED94X67-A

TECHNICAL DATA

- * CONTROLLER UC1611s WITH INTEGRATED GRAFIC-RAM
- * HIGH-CONTRAST LCD SUPERTWIST DISPLAY (STN AND FSTN) WITH 15µm DOT GAP
- * OPTIONAL LED BACKLIGHTS IN VARIOUS COLORS
- * 240x128 DOTS (CORRESPONDS TO 16 x40 CHARS OR 8X20 LARGE CHARS)
- * POWER SUPPLY: SINGLE SUPPLY 2,7..3,3V (typ. 900 µA)
- * NO ADDITIONAL VOLTAGES REQUIRED
- * THREE DIFFERENT INTERFACES: 3-WIRE SPI, 4-WIRE SPI AND I²C
- * OPERATING TEMPERATURE RANGE -20..+70°C (STORAGE -30..+80°C)
- * LED BACKLIGHTING 10 to 150mA
- * NO MOUNTING REQUIRED: SIMPLY SOLDER ONTO PCB

ORDERING CODE

GRAPHICS DISPLAY, 240x128, 94x67mm

x: *W* = white background (FSTN pos. transreflective)

B = blue background (STN neg. transmissive)

S = black background (FSTN neg. transmissive)

N = superwhite background (FSTN pos. reflective, cannot be backlit)

LED BACKLIGHT, WHITE

LED BACKLIGHT, AMBER

LED BACKLIGHT, DUO COLOR GREEN/RED

EA DOGXL240x-7

EA LED94X67-A

EA LED94X67-GR

ACCESSORIES

USB TEST BOARD FOR PC (WINDOWS 2000, XP, VISTA)

TOUCH PANEL, 4-WIRE, ANALOG, STICK-ON

ZIF CONNECTOR FOR TOUCH PANEL, BOTTOM CONTACT

10 CHARACTER SETS e.g. 6x8,8x8,8x16,CYRILLIC, FONT EDITOR

SOCKET 4.8mm HEIGHT (2 pcs. ARE NECESSARY)

EA 9780-3USB

EA TOUCH240-3

EA WF100-04S

EA USBSTICK-FONT

EA FL-20P

PINOUT

The EA DOGXL240-7, a 240x128 dots graphics display, is a new addition to ELECTRONIC ASSEMBLY's EA DOG series. It, too, has pins that allow it to be mounted quickly and easily.

CONTRAST ADJUSTMENT

The contrast can be set by means of a command for all the displays in the EA DOGXL- Series. The contrast setting of the display must be set once by the software, and is then kept constant throughout the entire operating temperature range (-20...+70°C), thanks to the integrated temperature compensation.

LED-BACKLIGHT

3 different variants are available for individual backlighting: white, amber and a duo-color green/red version.

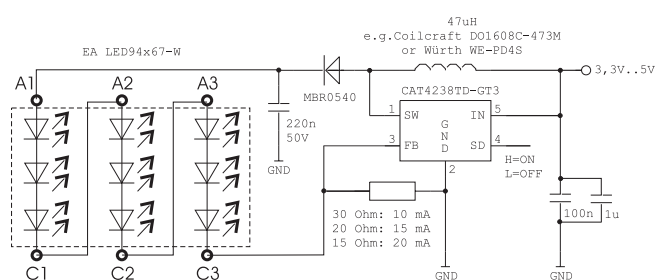

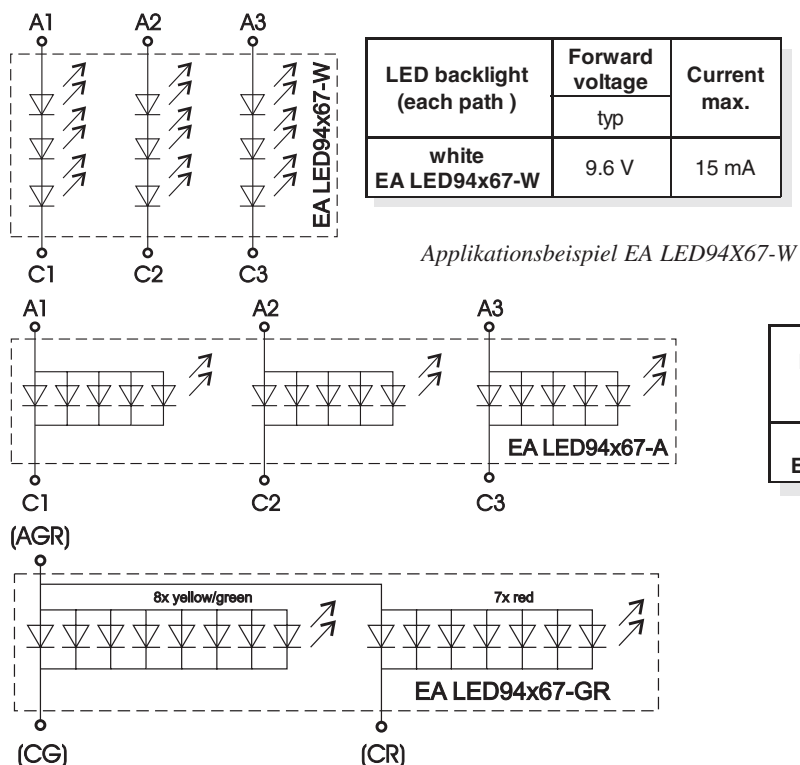

With the amber backlight, there are 3 separate LED paths containig 5 parallel LEDs, that can be switched in parallel or in series to suit the system's voltage.

With the white backlight, there are 3 separate LED paths containig 3 LEDs in series. To operate the backlight, we recommend a current source (e.g. CAT4238TD).

The duo-color backlight has common anode and two terminals for driving the red and / or the green color.

The operating life of the amber and green/red backlights is 100,000 hours. The LEDs of the white backlight are high quality NICHIA LEDs. To achieve the life-time of 100k hours, we recommend dimming or switching them off whenever possible.

Important: Do never connect the backlight LEDs directly to a 5 V/3.3 V supply as this will immediately destroy the LEDs. Always use a current source. Please note that derating applies at temperatures exceeding +25°C.

LED backlight (each path)	Forward voltage	Current	Limiting resistor (ohm)	
	typ	max	@3,3 V	@5 V
amber EA LED94x67-A	2.1 V	100 mA	12	29

LED backlight (each color)	Forward voltage	Current	Limiting resistor (ohm)
	typ	max	@5 V
full color EA LED94x67-GR	2.1 V	120 mA	25

DOGXL240-7 GRAPHIC

4 DIFFERENT TECHNOLOGIES

See below for an overview of available technologies, combinations with available backlights and their usability:

display type	technology	optional backlight	readability	display color non backlighted	display color with backlighted	recommended backlight color
	FSTN pos. transfective	it's fine with and without backlight	readable even without backlight	black on white	black on backlight color	all
	STN neg. blue transmissive	backlight unit required	---	---	backlight color on blue background	white, amber
	FSTN neg. transmissive	backlight unit required	---	---	backlight color on black background	all
	FSTN pos. reflective	no backlight possible	finest readable without backlight	black on white	---	---

3 DIFFERENT BACKLIGHTS

Three different backlight colors are available to match equipments design as much as possible. The most effective and brightest one is the white one EA LED94X67-W.

EA LED94X67-W
white

EA LED94X67-A
amber

EA LED94X67-GR
green / red

If you see black and white pictures on this page but you want to see the colors of the displays, you can download a full-colored version of this document at:

<http://www.lcd-module.de/deu/pdf/grafik/dogxl240-7e.pdf>

CHARACTER SET AND FONT EDITOR (ACCESSORY)

With the ordering code EA USBSTICK-FONT a memory stick comes with various character sets, especially made for this display. An import function allows additionally to use Windows fonts. With the FontEditor it is easy to generate for example Cyrillic, Greek and Arabic fonts. The preview function shows immediately the size and style in simulation window.

When the testboard EA 9780-3USB is connected to the USB port, you can see the character (or any predefined text) live on the display !

DATA TRANSFER

The EA DOGXL240-7 supports three serial modes. The data transfer of the two SPI-Modes is unidirectional, that means data can only be written, not read back. Compared to other displays, a busy query is not necessary. The clock-pulse rate of the CLK line can be up to 8MHz, depending on the supply voltage and interface mode.

More detailed information on timing can be found on page 64 to 66 of the data sheet of the UC1611s controller on our website at http://www.lcd-module.de/fileadmin/eng/pdf/zubehoer/uc1611s_v1_0.pdf

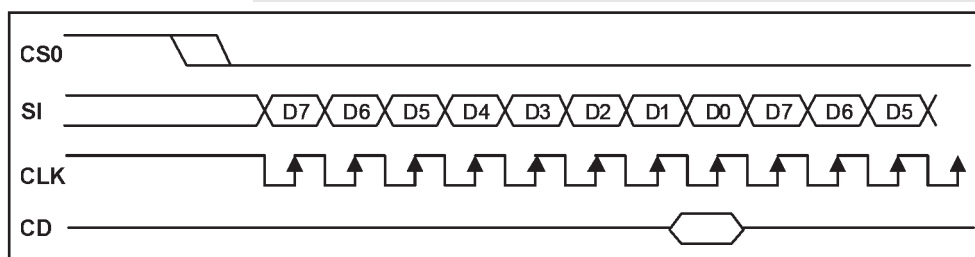

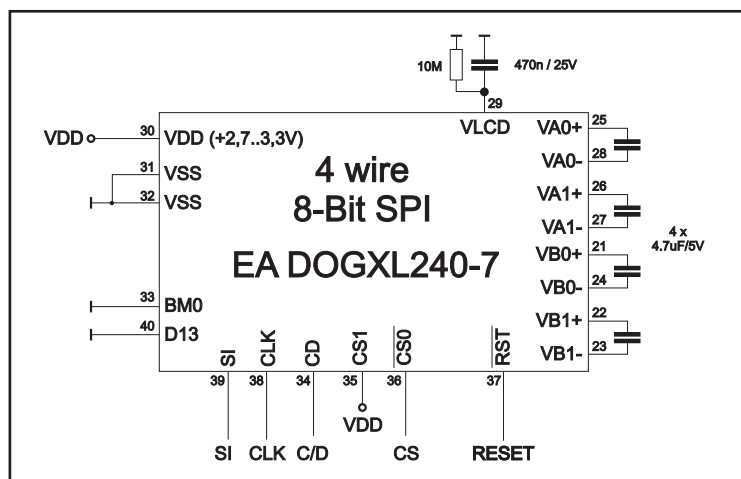

Serial Modes		
BM0	D13	Description
0	0	4-wire, 8-Bit SPI
1	0	3-wire, 9-Bit SPI
1	1	2-wire, I2C

4 WIRE, 8-BIT SPI-MODE

Falling edge on Pin CS0 (or rising edge on PIN CS1) is used for chip select and bus cycle reset. During each write cycle, 8 bits of data, MSB first, are latched on eight rising CLK edges into an 8-bit data holder.

If CD=0 (reading at D0), the byte will be decoded as command. If CD=1, this 8-bit will be treated as data byte.

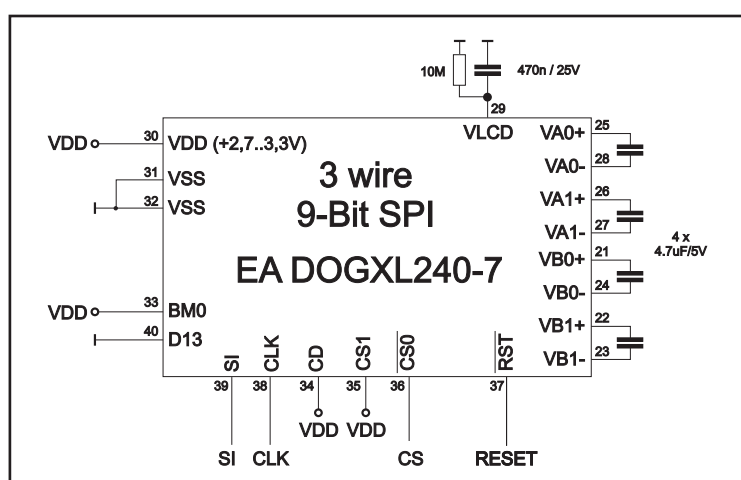

The clock-pulse rate of the CLK line can be up to 8 MHz, depending on power supply and wiring.

3 WIRE, 9-BIT SPI-MODE

Falling edge on PIN CS0 (or rising edge on PIN CS1) is used for chip select and bus cycle reset. First of all the CD-Bit is transferred to select whether data (H) or command (L) is followed up within the next 8 bit (MSB first)

The clock-pulse rate of the CLK line can be up to 8 MHz, depending on power supply and wiring.

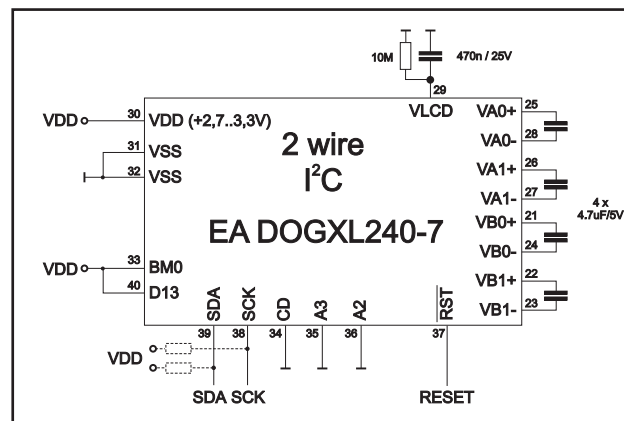

DOGXL240-7 GRAPHIC

2 WIRE, I²C-MODE

Pin A2 and A3 is used to configure the device address. That means up to 4 displays can use the same I²C bus.

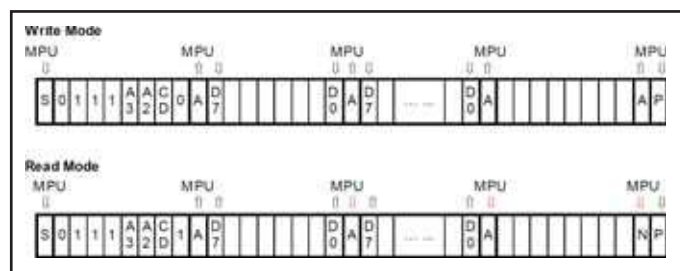

The I²C mode has a bidirectional data transfer, i.e. data can be read back from the display's ram. The clock-pulse rate of the CLK line can be up to 1.7 MHz, depending on power supply and wiring. Please be informed, that the pins SDA+SCK contain an internal resistance of 600 to 1000 Ohm, or even more (Important, because of the LO-level while reading data and the ACK-Bit).

Important: After the commands to set page or column adress you always have to read a dummy byte.

A2=VSS / A3=VSS (like application example)	
Adr	Function
\$70	Write Command
\$71	Read Status
\$72	Write Data
\$73	Read Data

A2=VDD / A3=VDD

\$76	Write Data
\$77	Read Data

A2=VSS / A3=VDD	
Adr	Function
\$78	Write Command
\$79	Read Status
\$7A	Write Data
\$7B	Read Data

USB-TEST BOARD EA 9780-3USB

For easy startup, an USB test board is available that can be connected to a PC. It comes with an USB cable and a Windows software. This allows text and images (BMP) to be displayed directly on the plugged-in display. You will find more information on the test board in the EA 9780-3USB's data sheet.

SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software for free from our website.

<http://www.lcd-module.com/produkte/dog.html>

TOUCH PANEL EA TOUCH240-3 (OPTIONAL)

An analog touch panel is available as an accessory. It has a self-adhesive material on its rear side that makes it simply to stuck onto the display. The connection is made by means of a 4-pin flexible cable for a ZIF connector (e.g. EA WF100-04S) with a grid of 1.0 mm. Bending radius is defined with min. 5mm. For optimum

readability we recommend that you use a backlight with the display.

Interfacing to a μ C can be either done via external touch panel controller or directly with a μ C that is featured with analogue inputs.

How to work with it ? The touch panel is similar to a potentiometer: connecting a voltage of e.g. 3.3V to the pins *Top-Bottom* makes it possible to read out a voltage on pin *Left* or *Right* which is linear to the Y-coordinate of the pressed point. The X-coordinate will result when the voltage will be supplied to *Left-Right* and measurement is done at *Top* or *Bottom*.

The pinout of the connecting cable is shown in the drawing.

Specification			
Specification	min	max	Unit
Top-Bottom	200	320	Ω
Left-Right	650	1200	Ω
Voltage	3	12	V
Current	5	25	mA
Linearity		1,5	%
Force	90	120	g
Contact Bounce	5	10	ms
Op. Temperatur	-20	+60	$^{\circ}\text{C}$
Stor. Temperatur	-20	+70	$^{\circ}\text{C}$
Transmission	75	85	%
Life Time	100000		Cycles

ZIF CONNECTOR EA WF100-04S

As an accessory for the touch panel we do provide a ZIF connector (4 pins) with pitch 1.0mm (SMD type). This connector is a „bottom side contact“ type

GRAPHIC RAM

The EA DOGXL240-7 has integrated a RAM to store 4 complete display contents. One byte contains 8 dots. The complete datasheet for the controller UC1611s can be downloaded on our homepage:

http://www.lcd-module.de/fileadmin/eng/pdf/zubehoer/uc1611s_v1_0.pdf

ACCESSORIES: FEMALE SOCKET EA FL-20P

With the help of the single-row female connector stripe EA FL20-P the mounting of the display is detachable. In addition the overall height can be adjusted. 2 pieces are required for one display!

MOUNTING / ASSEMBLING

First, clip the display and backlight modules together by gently pushing the display pins through the corresponding holes on the backlight module. Then insert the entire module into the socket, or into the soldering holes on the pcb. The backlight pins (6 pins at the bottom) must be soldered on the top side as well to ensure good contact between the modules.

Important:

- The display and the backlight do have in summary 3 protective films. There are some on the top and the bottom of the display and also one on the backlight. These must be removed.
- LC displays are generally not suited for wave or reflow soldering. Temperatures of over 80°C can cause lasting damage.
- Make sure that either display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.
