Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- GENE-CV05 CPU Card with Active Cooler (Intel® Atom™ D2550 version) or Passive Heatsink (Intel® Atom™ N2800/N2600 version)
- DVD-ROM for manual (in PDF format) and drivers

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

General Information

1.1 Introduction

AAEON, a leading embedded boards manufacturer, is pleased to announce the debut of their new generation 3.5" SubCompact Board — GENE-CV05.

GENE-CV05 adopts Intel® Atom™ D2550/N2800/N2600 Processor. The system memory is deployed with 204-pin SODIMM DDR3 800/1066 up to 4 GB for Intel® Atom™ D2550 /N2800 processor and up to 2 GB for Intel® Atom™ N2600 Processor. In addition, Realtek RTL8111E supports two 10/100/1000Base-TX that allows a faster network connections.

The display of GENE-CV05 supports CRT/LCD, DVI/LCD simultaneous and dual view displays. This model applies one Mini Card and LPC bus for flexible expansions. Moreover, one SATA 3.0Gb/s and one CFast™ provide a better storage. Six USB2.0, six COM Ports (five RS-232, one RS-232/422/485) and 8-bit digital I/O are configured on the GENE-CV05 as well. Full functions make GENE-CV05 user friendly. This brand new SubCompact board is developed to cater to the requirements of Automation, Medical, ticket machine, transportation, gaming, KIOSK, and POS/POI applications.

1.2 Features

- Onboard Intel® Atom™ D2550/N2800/N2600 Processor
- Intel® NM10
- DDR3 800/1066 SODIMM , Max. 4 GB for Intel® Atom™ D2550/N2800 Processor, and Max. 2 GB for Intel® Atom™ N2600 Processor
- Gigabit Ethernet x 2
- CRT, 24-bit Single Channel LVDS LCD +18/24-bit Dual Channel LVDS LCD for Intel® Atom™ D2550 Processor; 18-bit Single Channel LVDS LCD+ 18/24-bit Dual Channel LVDS LCD for Intel® Atom™ N2800/N2600 Processor
- 2CH HD Audio + 2W Amplifier
- SATA 3.0Gb/s x 1, CFAST™ x 1
- USB2.0 x 6, COM x 6 , 8-bit Digital I/O, Parallel x 1 (Optional)
- Onboard 4/5/8-wire Resistive Touch Screen Controller
- Mini Card x 1
- +12V Only Operation
- Onboard Trusted Platform Module (Optional)
- mSATA x 1 (Optional, if you choose mSATA, the functions of Mini Card & CFAST™ will be disabled.)

1.3 Specifications

System

- Processor Intel® Atom™
D2550/N2800/N2600 Processor
- System Memory 204-pin DDR3 SODIMM x 1,
Max. 4 GB (DDR3 800/1066) for
Intel® Atom™D2550/N2800;
Max. 2 GB (DDR3 800/1066) for
Intel® Atom™N2600
- Chipset Intel® NM10
- I/O Chipset ITE 8783
- Ethernet Realtek RTL8111E,
10/100/1000Base-TX, RJ-45 x 2
- BIOS AMI BIOS SPI type, 4MB ROM
- Wake On LAN Yes
- Watchdog Timer Generates a time-out system
reset
- H/W Status Monitoring Supports power supply
voltages and temperature
monitoring
- Expansion Interface Mini Card x 1, LPC bus
- Power Requirement +12V, AT/ATX
- Trusted Platform Infineon SLB 9635 TT 1.2
Module (TPM) (Optional)

- Battery Lithium battery
- Board Size 5.75"(L) x 4"(W) (146mm x 101.6mm)
- Gross Weight 0.88 lb (0.4 Kg)
- Operating Temperature 32°F~140°F (0°C ~ 60°C)
WiTAS2: -40°F~185°F (-40°C ~ 85°C) (GENE-CV05W2-A10-13)
- Storage Temperature -40°F~ 176°F (-40°C ~ 80°C)
- Operating Humidity 0%~90% relative humidity, non-condensing

Display: Supports CRT/LCD, DVI/LCD, simultaneous and dual view displays

- Chipset Intel® Atom™D2550/ N2800/ N2600 integrated
- Memory Shared system memory up to 256 MB
- LCD Interface LCD Interface Dual LVDS
LCDs: 24-bit Single Channel LVDS LCD + 18/24-bit Dual channel LVDS LCD for Intel® Atom™D2550; 18-bit Single Channel LVDS LCD + 18/24-bit Dual Channel LVDS LCD for Intel® Atom™N2800/N2600

- Resolution Up to 1920 x 1200 for CRT;
Up to 1366 x 768 for LCD;
Up to 1920 x 1200 for LCD
(TF-GENE-CV05-A10-14 Only)

I/O

- Storage SATA 3.0Gb/s x 1, CFast™ x 1
- Serial Port RS-232 x 5, RS-232/422/485
(auto flow) x 1 (the baud rate of
the serial port should be 9600
during high temperature
operation)
- Parallel Port SPP/EPP/ECP x 1 (Optional)
- USB Port USB2.0 x 6
- PS/2 Port Keyboard x 1, Mouse x 1
- Digital I/O Supports 8-bit (Programmable)
- Audio MIC-in, Line-in, Line-out
- Touch Screen Supports 4/5/8-wire resistive
touch screen

Note: (1) If you choose Parallel Port, the COM6 will be removed
from the GENE-CV05.

(2) Dose not support RC-D (2Rx16 dual die), and
RC-E(2Rx16) DDR3 SODIMM momery.

(3) Max memory size by sku: N2600 series 2GB; N2800,

D2550 series 4GB.

Chapter

2

**Quick
Installation
Guide**

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

Caution!

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.2 Location of Connectors and Jumpers

Component Side

Solder Side

2.3 Mechanical Drawing

Component Side

Solder Side

2.4 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Label	Function
JP1	Auto Power Button Selection
JP2	Clear CMOS
JP3	COM2 RI/+5/+12V Selection
JP4	Touch Screen 4/5/8-wires Mode Selection
JP5	Brightness Control for 2 nd LVDS
JP6	2 nd LVDS Backlight Bias/PWM Mode Selection
JP7	2 nd LVDS Operating Voltage Selection
JP8	2 nd LVDS Inverter Voltage Selection
JP9	1 st LVDS Inverter Voltage Selection
JP10	1 st LVDS Backlight Bias/PWM Mode Selection
JP11	1 st LVDS Operating Voltage Selection

2.5 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

Label	Function
CN1	Front Panel
CN2	External +5VSB Input
CN3	CPU FAN
CN4	+5VSB Output w/ SMBus
CN5	SATA Port
CN6	External 12V Input
CN7	Digital I/O
CN8	Parallel Port
CN9	+5V Output for SATA HDD using
CN10	USB Port #6
CN11	COM Port #6
CN12	USB Port #5
CN13	COM Port #5
CN14	USB Port #4
CN15	USB Port #3
CN16	COM Port #4
CN17	LPC Expansion I/F
CN18	COM Port #3

CN19	COM Port #2
CN20	Touch Screen
CN21	Stereo-R Channel
CN22	2 nd LVDS (Dual channel 18/24bit)
CN23	PS/2 Keyboard & Mouse
CN24	2 nd LVDS Inverter
CN25	Stereo-L Channel
CN26	1 st LVDS Inverter
CN27	1 st LVDS (Single channel 18/24bit)
CN28	2 nd RJ-45 Ethernet
CN29	1 st RJ-45 Ethernet
CN30	USB Port #1 and #2
CN31	Audio Line In/Out and MIC
CN32	CRT/DVI (Configured by manufacturing)
CN33	COM Port #1
CN34	SIM Card Socket
CFD1	CFAST™
PCIE1	Mini Card/mSATA (Configured by manufacturing)
DIMM1	DDR3 SODIMM Slot

2.6 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

2.7 Auto Power Button Selection (JP1)

JP1	Function
1-2	Enable(Default)
2-3	Disable

2.8 Clear CMOS (JP2)

JP2	Function
1-2	Normal (Default)
2-3	Clear CMOS

2.9 COM2 RI/+5V/+12V Selection (JP3)

JP3	Function
1-2	+12V
3-4	RI (Default)
5-6	+5V

Note: Max. Current rating is 0.5A.

2.10 Touch Screen 4/5/8-wire Mode Selection (JP4)

JP4	Function
1-2	4/8-wire (Default)
Open	5-wire

2.11 Brightness Control for 2nd LVDS (JP5)

JP5	Function
1-2	Brightness Up
2-3	Brightness Down

Note: Controlled by triggering UP or DOWN.

2.12 2nd LVDS Backlight Bias/PWM Mode Selection (JP6)

JP6	Function
1-2	Bias (Default)
2-3	PWM Control

2.13 2nd LVDS Operating Voltage Selection (JP7)

JP7	Function
1-2	+5V
2-3	+3.3V (Default)

Note: Max. Current rating is 2A.

2.14 2nd LVDS Inverter Voltage Selection (JP8)

JP8	Function
1-2	+12V
2-3	+5V (Default)

Note: Max. Current rating is 1A.

2.15 1st LVDS Inverter Voltage Selection (JP9)

JP9	Function
1-2	+12V
2-3	+5V (Default)

Note: Max. Current rating is 1A.

2.16 1st LVDS Backlight Bias/PWM Mode Selection (JP10)

JP10	Function
1-2	Bias (Default)
2-3	PWM Control

2.17 1st LVDS Operating Voltage Selection (JP11)

JP11	Function
1-2	+5V
2-3	+3.3V (Default)

Note: Max. Current rating is 2A.

2.18 Front Panel (CN1)

Pin	Signal
(-) 1-2 (+)	ATX Power-on Button
(-) 3-4 (+)	HDD Active LED

AMI BIOS Setup

3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

System configuration verification

These routines check the current system configuration against the values stored in the CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The CMOS memory has lost power and the configuration information has been erased.

The GENE-CV05 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it runs down.

3.2 AMI BIOS Setup

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press or <F2> immediately. This will allow you to enter Setup.

Main

Set the date, use tab to switch between date elements.

Advanced

Advanced BIOS Features Setup including TPM, ACPI, etc.

Chipset

Host bridge parameters.

Boot

Enables/disable quiet boot option.

Security

Set setup administrator password.

Save&Exit

Exit system setup after saving the changes.

Note:

1. If the "**Control LVDS2 (CH7511)**" has been set "**Disable**," and then, the screen cannot be switched to LVDS2 under the OS.

2. If the "**Control LVDS2 (CH7511)**" has been set "**Enable**," and then, the screen can be switched to LVDS2 under the OS.
3. This model does not support LVDS2 output under DOS mode. So if it is a dual LVDS application, users have to enable "**Onboard LVDS 2**" on the LVDS1 panel under BIOS interface, and then, enter to the OS.
4. For LVDS1 + LVDS2 application, this model does not support scaling after entering the OS, users have to set the fixed resolution on their LCD Panel under BIOS interface, and then, enter to the OS.

Administrator Password/	Not set	
User Password		

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

Install the Password:

Press Enter on this item, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press Enter after you have retyped it correctly. The password is

required at boot time, or when the user enters the Setup utility.

Removing the Password:

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

HDD Security

**Driver
Installation**

The GENE-CV05 comes with a DVD-ROM that contains all drivers and utilities that meet your needs.

Follow the sequence below to install the drivers:

Step 1 – Install Chipset Driver

Step 2 – Install VGA Driver

Step 3 – Install LAN Driver

Step 4 – Install Audio Driver

Step 5 – Install AHCI Driver

Step 6 – Install TPM Driver

Step 7 – Install Touch Driver

Step 8 – Install Serial Port Driver (Optional)

4.1 Installation:

Insert the GENE-CV05 DVD-ROM into the DVD-ROM Drive. And install the drivers from Step 1 to Step 8 in order.

Step 1 – Install Chipset Driver

1. Click on the **STEP1-CHIPSET** folder and double click on the **.exe** file
2. Follow the instructions that the window shows
3. The system will help you install the driver automatically

Step 2 – Install VGA Driver

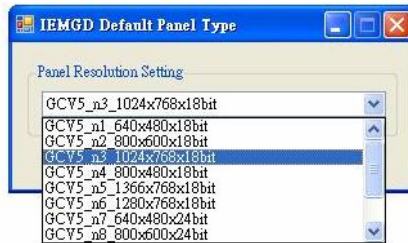

For Windows® 7

1. Click on the **STEP2-VGA** folder and select the folder of **WIN7_32**
2. Double click on the **Setup.exe** file
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

For Windows® XP

1. Install Framework 3.5
 - Double click on the **dotnetfx35.exe**
 - Follow the instructions that the window shows
 - The system will help you install the driver automatically
2. Install IEMGD
 - Double click on the **IEMGDInstall.exe**
 - Select the configuration

- Follow the instructions that the window shows
- The system will help you install the driver automatically

If you want to update driver, please uninstall driver first.

Uninstall IEMGD

1. Double click on the **IEMGDInstall.exe**
2. Follow the instructions that the window shows
3. The system will help you uninstall the driver automatically

Step 3 – Install LAN Driver

1. Click on the **STEP3-LAN** folder and select the OS folder your system is
2. Double click on the **setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 4 – Install Audio Driver

1. Click on the **STEP4-AUDIO** folder and select the OS folder your system is

2. Double click on the **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 5 – Install AHCI Driver

Please refer to Appendix D AHCI Settings

Step 6 – Install TPM Driver

1. Click on the **STEP6-TPM** folder and select the OS folder your system is
2. Double click on the **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 7 – Install Touch Driver

1. Click on the **STEP7-Touch** folder and select the OS folder your system is
2. Double click on the **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 8 – Install Serial Port Driver (Optional)

1. Click on the **STEP8-Serial Port Driver (Optional)** folder and select the OS folder your system is

2. Double click on the **Serial Patch v1.0.1_Eng.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Note: If the OS is Chinese version, you may click on **Serial Patch v1.0.1. exe** file located in each OS folder.

Appendix

A

Programming the Watchdog Timer

A.1 Programming

GENE-CV05 utilizes ITE 8783 chipset as its watchdog timer controller. Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

Configuring Sequence Description

After the hardware reset or power-on reset, the ITE 8783 enters the normal mode with all logical devices disabled except KBC. The initial state (enable bit) of this logical device (KBC) is determined by the state of pin 121 (DTR1#) at the falling edge of the system reset during power-on reset.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

(1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

	Address Port	Data Port
87h, 01h, 55h, 55h:	2Eh	2Fh

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the MB PnP Mode

Set bit 1 of the configure control register (Index=02h) to 1 to exit the MB PnP Mode.

WatchDog Timer Configuration Registers

LDN	Index	R/W	Reset	Configuration Register or Action
All	02h	W	NA	Configure Control

07h	71h	R/W	00h	Watch Dog Timer Control Register
07h	72h	R/W	001s0000b	Watch Dog Timer Configuration Register
07h	73h	R/W	38h	Watch Dog Timer Time-out Value (LSB) Register
07h	74h	R/W	00h	Watch Dog Timer Time-out Value (MSB) Register

Configure Control (Index=02h)

This register is write only. Its values are not sticky; that is to say, a hardware reset will automatically clear the bits, and does not require the software to clear them.

Bit	Description
7-2	Reserved
1	Returns to the "Wait for Key" state. This bit is used when the configuration sequence is completed.
0	Resets all logical devices and restores configuration registers to their power-on states.

Watch Dog Timer 1, 2, 3 Control Register (Index=71h,81h,91h Default=00h)

Bit	Description
7	WDT Timeout Enable(WTE) 1: Disable. 0: Enable.
6	WDT Reset upon Mouse Interrupt(WRKMI) 0: Disable. 1: Enable.
5	WDT Reset upon Keyboard Interrupt(WRKBI) 0: Disable. 1: Enable.
4	Reserved
3-2	Reserved
1	Force Time-out(FTO) This bit is self-clearing.
0	WDT Status(WS) 1: WDT value reaches 0. 0: WDT value is not 0.

Watch Dog Timer 1, 2, 3 Configuration Register (Index=72h, 82h, 92h Default=001s0000b)

Bit	Description
7	WDT Time-out Value Select 1 (WTVS) 1: Second 0: Minute
6	WDT Output through KRST (Pulse) Enable(WOKE) 1: Enable 0: Disable
5	WDT Time-out value Extra select(WTVES) 1: 64ms x WDT Timer-out value (default = 4s) 0: Determined by WDT Time-out value select 1 (bit 7 of this register)
4	WDT Output through PWROK (Pulse) Enable(WOPE) 1: Enable 0: Disable During LRESET#, this bit is selected by JP7 power-on strapping option
3-0	Select interrupt level^{Note1} for WDT(SIL)

Watch Dog Timer 1,2,3 Time-Out Value (LSB) Register (Index=73h,83h,93h, Default=38h)

Bit	Description
7-0	WDT Time-out Value 7-0(WTV)

Watch Dog Timer 1,2,3 Time-Out Value (MSB) Register (Index=74h,84h,94h Default=00h)

Bit	Description
7-0	WDT Time-out Value 15-8(WTV)

BAT1	External RTC Connector	Molex	51021-0200	Battery Cable	175011901C

Appendix

D

AHCI Setting

D.1 Setting AHCI

OS installation to setup AHCI Mode.

Step 1: Copy the files below from “Driver CD -> STEP5-AHCI\WIN7_32\F6

Install Floppy Create for 32 and 64 bit Windows” to Disk

Step 2: Connect the USB Floppy to the board

Step 3: Setup OS

Step 4: Press "F6"

Step 5: Choose "S"

Step 6: Choose "Intel(R) NM10 Express Chipset"

Step 7: It will show the model number you select and then press “**ENTER**”

Step 8: Setup is loading files

Appendix

E

Digital I/O

E.1 Digital I/O

The F75111 provides one serial access interface, I2C Bus, to read/write internal registers. The address of Serial Bus is 0x6E (0110_1110)

The related register for configuring DIO is list as follows:

Configuration and Control Register-Index 01h

Power-on default [7:0]=0000_1000b

Bit	Name	R/W	PWR	Description
7	INIT	R/W	VSB3V	Software reset for all registers including Test Mode registers. Users use only.
6	Reserved	R/W	VSB3V	
5	EN_WDT10	R/W	VSB3V	Enable Reset Out. If set to 1, enable WDTOUT10# output. Default is disable.
4	Reserved	R/W	VSB3V	
3	Reserved	R/W	VSB3V	
2	Reserved	R/W	VSB3V	
1	SMART_P OWR_MAG EMENT	R/W	VSB3V	Set this bit to 1 will enable auto power down mode, when all function are idle then 20ms the chip will auto power down, it will wakeup when GPIO state change or read write register
0	SOFT_PO WR_DOW N	R/W	VSB3V	Set this bit to 1 will power down all of the analog block and stop internal clock, write 0 to clear this bit or when GPIO state change will auto clear this bit to 0.

GPIO2x Output Control Register-Index 20h

Power-on default [7:0]=0000_0000b

Bit	Name	R/W	PWR	Description
7	GP27_OCT RL	R/W	VSB3V	GPIO 27 output control. Set to 1 for output function. Set to 0 for input function (default).
6	GP26_OCT RL	R/W	VSB3V	GPIO 26 output control. Set to 1 for output function. Set to 0 for input function (default).
5	GP25_OCT RL	R/W	VSB3V	GPIO 25 output control. Set to 1 for output function. Set to 0 for input function (default).
4	GP24_OCT RL	R/W	VSB3V	GPIO 24 output control. Set to 1 for output function. Set to 0 for input function (default).
3	GP23_OCT RL	R/W	VSB3V	GPIO 23 output control. Set to 1 for output function. Set to 0 for input function (default).
2	GP22_OCT RL	R/W	VSB3V	GPIO 22 output control. Set to 1 for output function. Set to 0 for input function (default).
1	GP21_OCT RL	R/W	VSB3V	GPIO 21 output control. Set to 1 for output function. Set to 0 for input function (default).
0	GP20_OCT RL	R/W	VSB3V	GPIO 20 output control. Set to 1 for output function. Set to 0 for input function (default).

GPIO2x Output Data Register-Index 21h

Power-on default [7:0]=0000_0000b

Bit	Name	R/W	PWR	Description
7	GP27_ODA TA	R/W	VSB3V	GPIO 27 output data.
6	GP26_ODA TA	R/W	VSB3V	GPIO 26 output data.
5	GP25_ODA TA	R/W	VSB3V	GPIO 25 output data.

4	GP24_ODA TA	R/W	VSB3V	GPIO 24 output data.
3	GP23_ODA TA	R/W	VSB3V	GPIO 23 output data.
2	GP22_ODA TA	R/W	VSB3V	GPIO 22 output data.
1	GP21_ODA TA	R/W	VSB3V	GPIO 21 output data.
0	GP20_ODA TA	R/W	VSB3V	GPIO 20 output data.

GPIO2x Input Status Register-Index 22h

Power-on default [7:0]=xxxx_xxxx_b

Bit	Name	R/W	PWR	Description
7	GP27_PST S	RO	VSB3V	Read the GPIO27 data on the pin.
6	GP26_PST S	RO	VSB3V	Read the GPIO26 data on the pin.
5	GP25_PST S	RO	VSB3V	Read the GPIO25 data on the pin.
4	GP24_PST S	RO	VSB3V	Read the GPIO24 data on the pin.
3	GP23_PST S	RO	VSB3V	Read the GPIO23 data on the pin.
2	GP22_PST S	RO	VSB3V	Read the GPIO22 data on the pin.
1	GP21_PST S	RO	VSB3V	Read the GPIO21 data on the pin.
0	GP20_PST S	RO	VSB3V	Read the GPIO20 data on the pin.
