Pipe System 75 - Volume Extraction

End seal, PE, transparent

Pipe System 75 Volume Extraction

Volume extraction systems require a large volume of air to be extracted and the level of vacuum is of lesser importance. This means that a relatively large diameter pipe system is required. If the pipe diameter was too small the flow resistance would increase and extraction capacity reduced. The pipe system 75 allows installations up to 30 m with the WFE 4S used in a stand alone system. The pipe sections are designed to stick together and have internal sealing bushes.

*PEHD= Polyethylen high density, PE= Polyethylen
