## 1．Module Classification Information <br> 

| 1 | Brand ：WINSTAR DISPLAY CORPORATION |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 2 | E：OLED |  |  |  |
| 3 | Display Type | H：COB Character | G ：COB Graphic |  |
|  |  | O：COG | F：COG＋FR |  |
|  |  | P ：$C O G+F R+P C B$ | X ：TAB |  |
|  |  | A ：COG＋PCB |  |  |
| 4 | Dot Matrix ： 128 ＊ 64 |  |  |  |
| 5 | Serials code |  |  |  |
| 6 | Emitting Color | A ：Amber | R ：Red | C ：Full Color |
|  |  | B ：Blue | W：White |  |
|  |  | G：Green | L ：Yellow |  |
|  |  | S ：Sky Blue | X ：Dual Color |  |
| 7 | Polarizer | $P$ ：With Polarizer； N ：Without Polarizer <br> A ：Anti－glare Polarizer |  |  |
| 8 | Display Mode | P ：Passive Matrix ； N ：Active Matrix |  |  |
| 9 | Driver Voltage | 3：3．0～3．3V ；5：5．0V |  |  |
| 10 | Touch Panel | N ：Without touch panel；T：With touch panel |  |  |
| 11 | Product type | 0 ：Standard <br> 1 ：Daylight Readable <br> 2 ：Transparent OLED（TOLED） <br> 3 ：Flexible OLED（FOLED） <br> 4 ：OLED Lighting |  |  |
| 12 | Inspection Grade | 0 ：Standard <br> 2 ：Special grade <br> C：Automotive grade <br> Y：Consumer grade |  |  |
| 13 | Option | 0 ：Default ；F ：ZIF FPC ；H ：Hot bar FPC；D ：Demo Kit |  |  |
| 14 | Serial No． | Serial number（00～ZZ） |  |  |

## 2．General Specification

| Item | Dimension | Unit |  |
| :--- | :---: | :---: | :---: |
| Dot Matrix | $128 \times 64$ | - |  |
| Module dimension | $45.24 \times 29.14 \times 2.01$ | mm |  |
| Active Area | $35.05 \times 17.51$ | mm |  |
| Pixel Size | $0.249 \times 0.249$ | mm |  |
| Pixel Pitch | $0.274 \times 0.274$ | mm |  |
| Display Mode | Passive Matrix |  |  |
| Display Color |  |  |  |
| Drive Duty | $1 / 64$ Duty |  |  |
| IC | SSD1309 |  |  |
| Interface | $6800,8080,4-$－wire SPI，I2C |  |  |
| Size | 1.54 inch |  |  |

## 3．Contour Drawing \＆Block Diagram

The non－specified tolerance of dimension is $\pm 0.3 \mathrm{~mm}$ ．

## 3．1 Application recommendations

Recommended components：
C1，C2 ：2．2uF／25V／0603
C3：1．0uF／16V／0603

Bus Interface selection：（Must be set the BS［2：1］，refer to chapter 4） 8 －bits 6800 and 8080 parallel，SPI，I2C

Voltage at IREF $\approx \mathrm{VCC}-3 \mathrm{~V}$ ．For VCC $=12.5 \mathrm{~V}$ ，IREF $=10 \mathrm{uA}$ ：
R1＝（Voltage at IREF－VSS）／IREF
$\approx(12.5-3) \mathrm{V} / 10 u \mathrm{~A}=950 \mathrm{~K} \Omega$

## 4．Interface Pin Function

| 12 | E／RD\＃ | This pin is MCU interface input． <br> When 6800 interface mode is selected，this pin will be used as the <br> Enable（E）signal． <br> Read／write operation is initiated when this pin is pulled HIGH and the <br> chip is selected． <br> When 8080 interface mode is selected，this pin receives the Read <br> （RD\＃）signal．Read operation is initiated when this pin is pulled LOW <br> and the chip is selected． <br> When serial or I2C interface is selected，this pin must be connected to <br> VSS． |
| :---: | :---: | :--- |
| $\mathbf{1 3 - 2 0}$ | D0～D7 | These pins are bi－directional data bus connecting to the MCU data <br> bus． <br> Unused pins are recommended to tie LOW． <br> When serial interface mode is selected，D0 will be the serial clock <br> input：SCLK；D1 will be the serial data input：SDIN and D2 should be <br> kept NC． <br> When I2C mode is selected，D2，D1 should be tied together and <br> serve as SDAout， <br> SDAin in application and D0 is the serial clock input，SCL． |
| $\mathbf{2 1}$ | IREF | This pin is the segment output current reference pin． <br> IREF is supplied externally． |
| $\mathbf{2 2}$ | VCOMH | COM signal deselected voltage level． <br> A capacitor should be connected between this pin and VSS． |
| $\mathbf{2 3}$ | VCC | Power supply for panel driving voltage．This is also the most positive <br> power voltage supply pin． |
| $\mathbf{2 4}$ | NC（GND） | No connection |

## 5．Absolute Maximum Ratings

| Parameter | Symbol | Min | Max | Unit | Notes |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Supply Voltage for Logic | VDD | -0.3 | 4 | V | 1,2 |
| Supply Voltage for Display | VCC | 0 | 15 | V | 1,2 |
| Operating Temperature | TOP | -40 | +80 | ${ }^{\circ} \mathrm{C}$ | - |
| Storage Temperature | TSTG | -40 | +85 | ${ }^{\circ} \mathrm{C}$ | - |

Note 1：All the above voltages are on the basis of＂VSS＝0V＂．
Note 2：When this module is used beyond the above absolute maximum ratings，permanent breakage of the module may occur．Also，for normal operations，it is desirable to use this module under the conditions according to Section 6 ＇Electrical Characteristics＂．If this module is used beyond these conditions，malfunctioning of the module can occur and the reliability of the module may deteriorate

## 6．Electrical Characteristics

## 6．1 DC Electrical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Supply Voltage for Logic | VDD | - | 2.8 | 3.0 | 3.3 | V |
| Supply Voltage for Display | VCC | - | 12.0 | 12.5 | 13.0 | V |
| High Level Input | VIH | - | $0.8 \times \mathrm{VDD}$ | - | - | V |
| Low Level Input | VIL | - | - | - | $0.2 \times \mathrm{VDD}$ | V |
| High Level Output | VOH | - | $0.9 \times \mathrm{VDD}$ | - | - | V |
| Low Level Output | VOL | - | - | - | $0.1 \times \mathrm{VDD}$ | V |
| $50 \%$ Check Board operating Current | VCC $=12.5 \mathrm{~V}$ | - | 16.0 | 24.0 | mA |  |

## 6．2 Initial code

```
void Initial_SSD1309ZC(){
    Write_command(0xAE); //Display Off
    Write_command(0xAD); //Master Configuration
    Write_command(0x8e); //Select external VCC supply
    Write_command(0xA8); //Select Multiplex Ratio
    Write_command(0x3F); //Default => 0x3F (1/64 Duty) 0x1F(1/32 Duty)
    Write_command(0xD3); //Setting Display Offset
    Write_command(0x00); //00H Reset
    Write_command(0x00); //Set Column Address LSB
    Write_command(0x10); //Set Column Address MSB
    Write_command(0x40); //Set Display Start Line
    Write_command(0x00); //Set Memory Addressing Mode Default => 0x02
        //0x00 => Horizontal Addressing Mode
    Write_command(0xA6); //Set Normal Display
    Write_command(0xDB); //Set Deselect Vcomh level
    Write_command(0x3c); //~0.83xVCC
    Write_command(0xA4); //Entire Display ON
    Write_command(0x81); //Set Contrast Control
Write_command(0x6F);
Write_command(0xD5); //SET DISPLAY CLOCK
Write_command(0xFO); //105HZ
Write_command(0xD8); //Select Area color ON/OFF
Write_command(0x05); //MONO Mode and Low Power display Mode
Write_command(0xA1); //Set Segment Re-Map Default => 0xA0
    //0xA1 (0x01) => Column Address 0 Mapped to SEG131
Write_command(0xC8); //Set COM Output Scan Direction Default => 0xC0
    //0xC8 (0x08) => Scan from COM63 to 0
Write_command(0xDA); //Set COM Hardware Configuration
Write_command(0x12); //Alternative COM Pin
Write_command(0xD9); //Set Pre-Charge period
Write_command(0xF1);
Write_command(0xFF);
Write_command(0xAF); // Display ON
}
```

## 7．Optical Characteristics

| Item | Symbol | Condition | Min | Typ | Max | Unit |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| View Angle | $(\mathrm{V}) \theta$ | - | 160 | - | - | deg |  |  |  |  |  |  |
|  | $(\mathrm{H}) \varphi$ | - | 160 | - | - | deg |  |  |  |  |  |  |
| Contrast Ratio | CR | Dark | $2000: 1$ | - | - | - |  |  |  |  |  |  |
|  | T rise | - | - | 10 | - | $\mu \mathrm{s}$ |  |  |  |  |  |  |
|  | T fall | - | - | 10 | - | $\mu \mathrm{s}$ |  |  |  |  |  |  |
| Display with 50\％check Board Brightness |  | 120 | 150 | - | $\mathrm{cd} / \mathrm{m} 2$ |  |  |  |  |  |  |  |
| CIEx（Yellow） |  | （CIE1931） | 0.45 | 0.47 | 0.49 | - |  |  |  |  |  |  |
| CIEy（Yellow） |  |  |  |  |  |  |  | （CIE1931） | 0.48 | 0.50 | 0.52 | - |

| ITEM | Conditions | Min | Typ | Remark |
| :---: | :---: | :---: | :---: | :---: |
| Operating <br> Life Time | Ta $=25^{\circ} \mathrm{C}$ <br> $/$ Initial $50 \%$ check board <br> brightness $100 \mathrm{~cd} / \mathrm{m}^{2}$ | $50,000 \mathrm{Hrs}$ | - | Note |

Notes：
1．Life time is defined the amount of time when the luminance has decayed to $<50 \%$ of the initial value．
2．This analysis method uses life data obtained under accelerated conditions to extrapolate an estimated probability density function（ $p d f$ f）for the product under normal use conditions．
3．Screen saving mode will extend OLED lifetime．

## 9．Reliability

Content of Reliability Test

| Environmental Test |  |  |  |
| :---: | :---: | :---: | :---: |
| Test Item | Content of Test | Test Condition | Applicable Standard |
| High Temperature storage | Endurance test applying the high storage temperature for a long time． | $\begin{aligned} & 85^{\circ} \mathrm{C} \\ & 240 \mathrm{hrs} \end{aligned}$ |  |
| Low <br> Temperature storage | Endurance test applying the low storage temperature for a long time． | $\begin{aligned} & -40^{\circ} \mathrm{C} \\ & 240 \mathrm{hrs} \end{aligned}$ |  |
| High Temperature Operation | Endurance test applying the electric stress（Voltage \＆Current）and the thermal stress to the element for a long time． | $80^{\circ} \mathrm{C}$ 240hrs | － |
| Low <br> Temperature Operation | Endurance test applying the electric stress under low temperature for a long time． | $\begin{aligned} & -40^{\circ} \mathrm{C} \\ & 240 \mathrm{hrs} \end{aligned}$ |  |
| High Temperature／ Humidity Storage | Endurance test applying the high temperature and high humidity storage for a long time． | $\begin{aligned} & 60^{\circ} \mathrm{C}, 90 \% \mathrm{RH} \\ & 240 \mathrm{hrs} \end{aligned}$ | － |
| High Temperature／ Humidity Operation | Endurance test applying the high temperature and high humidity Operation for a long time． | $\begin{aligned} & 60^{\circ} \mathrm{C}, 90 \% \mathrm{RH} \\ & 120 \mathrm{hrs} \end{aligned}$ | － |
| Temperature Cycle | Endurance test applying the low and high temperature cycle． | $-40^{\circ} \mathrm{C} / 80^{\circ} \mathrm{C}$ <br> 30 cycles | － |
| Mechanical Test |  |  |  |
| Vibration test | Endurance test applying the vibration during transportation and using． | Frequency：10～55Hz amplitude：1．5mm Time：0．5hrs／axis Test axis： $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ |  |
| Others |  |  |  |
| Static electricity test | Endurance test applying the electric stress to the finished product housing． | Air Discharge model $\pm 4 \mathrm{kv}, 10$ times | － |

[^0]
## Test and measurement conditions

1．All measurements shall not be started until the specimens attain to temperature stability． After the completion of the described reliability test，the samples were left at room temperature for 2 hrs prior to conducting the failure test at $23 \pm 5^{\circ} \mathrm{C} ; 55 \pm 15 \% \mathrm{RH}$ ．
2．All－pixels on／off exchange is used as operation test pattern．
3．The degradation of Polarizer are ignored for High Temperature storage，High Temperature／ Humidity Storage，Temperature Cycle

## Evaluation criteria

1．The function test is OK．
2．No observable defects．
3．Luminance：$>50 \%$ of initial value．
4．Current consumption：within $\pm 50 \%$ of initial value．
APPENDIX：

## RESIDUE IMAGE

Because the pixels are lighted in different time，the luminance of active pixels may reduce or differ from inactive pixels．Therefore，the residue image will occur．
To avoid the residue image，every pixel needs to be lighted up uniformly．

## 10．Inspection speciffication

## Inspection Standard：

MIL－STD－105E table normal inspection single sample level II．

## Definition

1 Major defect ：The defect that greatly affect the usability of product．
2 Minor defect ：The other defects，such as cosmetic defects，etc．
Definition of inspection zone：

Zone A：Active Area
Zone B：Viewing Area except Zone A
Zone C：Outside Viewing Area
Note：As a general rule，visual defects in Zone C are permissible，when it is no trouble of quality and assembly to customer’s product．

## Inspection Methods

1 The general inspection：Under fluorescent light illumination：750～1500 Lux，about 30cm viewing distance，within $45^{\circ}$ viewing angle，under $25 \pm 5^{\circ} \mathrm{C}$ ．
2 The luminance and color coordinate inspection ：By SR－3 or BM－7 or the equal equipments，in the dark room，under $25 \pm 5^{\circ} \mathrm{C}$ ．

| NO | Item | Criterion | AQL |
| :---: | :---: | :---: | :---: |

## 11．Precautions in use of OLED Modules

## Modules

（1）Avoid applying excessive shocks to module or making any alterations or modifications to it．
（2）Don＇t make extra holes on the printed circuit board，change the components or modify its shape of OLED display module．
（3）Don＇t disassemble the OLED display module．
（4）Do not apply input signals while the logic power is off．
（5）Don＇t operate it above the absolute maximum rating．
（6）Don＇t drop，bend or twist OLED display module．
（7）Soldering：only to the I／O terminals．
（8）Hot－Bar FPC soldering condition：280～350C，less than 5 seconds．
（9）Winstar has the right to change the passive components（Resistors，capacitors and other passive components will have different appearance and color caused by the different supplier．）and change the PCB Rev．（In order to satisfy the supplying stability，management optimization and the best product performance．．．etc，under the premise of not affecting the electrical characteristics and external dimensions，Winstar have the right to modify the version．）
（10）Winstar has the right to upgrade or modify the product function．

## 11．1．Handling Precautions

（1）Since the display panel is being made of glass，do not apply mechanical impacts such as dropping from a high position．
（2）If the display panel is broken by some accident and the internal organic substance leaks out， be careful not to inhale nor lick the organic substance．
（3）If pressure is applied to the display surface or its neighborhood of the OLED display module， the cell structure may be damaged．So，be careful not to apply pressure to these sections．
（4）The polarizer covering the surface of the OLED display module is soft and easily scratched．
（5）When the surface of the polarizer of the OLED display module has soil，clean the surface．It takes advantage by using following adhesion tape．
＊Scotch Mending Tape No． 810 or an equivalent
Never try to breathe upon the soiled surface nor wipe the surface using cloth containing solvent such as ethyl alcohol，since the surface of the polarizer will become cloudy．
Also，pay attention that the following liquid and solvent may spoil the polarizer：
＊Water
＊Ketone
＊Aromatic Solvents
（6）Protection film is being applied to the surface of the display panel and removes the protection film before assembling it．At this time，if the OLED display module has been stored for a long period of time，residue adhesive material of the protection film may remain on the surface of the display panel after removed of the film．In such case，remove the residue material by the method introduced in the above Section 5.
（7）Do not touch the following sections whenever possible while handling the OLED display modules．
＊Pins and electrodes
＊Pattern layouts such as the TCP \＆FPC
（8）Hold OLED display module very carefully when placing OLED display module into the System housing．Do not apply excessive stress or pressure to OLED display module．And， do not over bend the film with electrode pattern layouts．These stresses will influence the display performance．Also，secure sufficient rigidity for the outer cases．

（9）Do not apply stress to the LSI chips and the surrounding molded sections．
（10）Pay sufficient attention to the working environments when handing OLED display modules to prevent occurrence of element breakage accidents by static electricity．
＊Be sure to make human body grounding when handling OLED display modules．
＊Be sure to ground tools to use or assembly such as soldering irons．
＊To suppress generation of static electricity，avoid carrying out assembly work under dry environments．
＊Protective film is being applied to the surface of the display panel of the OLED display module．Be careful since static electricity may be generated when exfoliating the protective film．

## 11．2．Storage Precautions

（1）When storing OLED display modules，put them in static electricity preventive bags to avoid be directly exposed to sun or lights of fluorescent lamps．（We recommend you to store these modules in the packaged state when they were shipped from Winstar．At that time，be careful not to let water drops adhere to the packages or bags．）
（2）When the OLED display module is being dewed or when it is placed under high temperature or high humidity environments，the electrodes may be corroded if electric current is applied． Please store it in clean environment．

## 11．3．Designing Precautions

（1）The absolute maximum ratings are the ratings which cannot be exceeded for OLED display module，and if these values are exceeded，OLED display module may be damaged．
（2）To prevent occurrence of malfunctioning by noise，pay attention to satisfy the VIL and VIH specification and to make the signal line cable as short as possible．
（3）We recommend you to install excess current preventive unit（fuses，etc．）to the power circuit （VDD／VCC）．（Recommend value：0．5A）
（4）Pay sufficient attention to avoid occurrence of mutual noise interference with the nearby devices．
（5）As for EMI，take necessary measures on the equipment side basically．
（6）If the power supplied to the OLED display module is forcibly shut down by such errors as taking out the main battery while the OLED display panel is in operation，we cannot guarantee the quality of this OLED display module．
＊Connection（contact）to any other potential than the above may lead to rupture of the IC．
（7）If this OLED driver is exposed to light，malfunctioning may occur and semiconductor elements may change their characteristics．
（8）The internal status may be changed，if excessive external noise enters into the module． Therefore，it is necessary to take appropriate measures to suppress noise generation or to protect module from influences of noise on the system design．
（9）We recommend you to make periodical refreshment of the operation statuses（re－setting of the commands and re－transference of the display data）to cope with catastrophic noise．
（10）It＇s pretty common to use＂Screen Saver＂to extend the lifetime and Don＇t use the same image for long time in real application．When an OLED display module is operated for a long of time with fixed pattern，an afterimage or slight contrast deviation may occur．
（11）The limitation of FPC and Film bending．

（12）The module should be fixed balanced into the housing，or the module may be twisted．

（13）Please heat up a little the tape sticking on the components when removing it；otherwise the components might be damaged．

## 11．4．Precautions when disposing of the OLED display modules

（1）Request the qualified companies to handle industrial wastes when disposing of the OLED display modules．Or，when burning them，be sure to observe the environmental and hygienic laws and regulations．

[^0]:    ＊＊＊Supply voltage for OLED system $=$ Operating voltage at $25^{\circ} \mathrm{C}$
